## Area and Circumference of a Circle

$\qquad$

Step 1: Locate these objects at the Caterpillar Visitors Center.
Step 2: Use a measuring tape or ruler to determine and record the diameter of each object (round to the nearest inch).
Step 3: After your visit, use the formulas to calculate the radius, area, and circumference of each circle.

1) D3400 Gen Set Engine (located in the Heritage Gallery)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius = $\qquad$
c) Area $=$ $\qquad$
d) Circumference $=$ $\qquad$
2) Heat Treat Wheel Loader Lathed Ring (located in the Caterpillar Production System gallery - measure to the inside of the flat ring surface)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius = $\qquad$
c) $\quad$ Area $=$ $\qquad$
d) Circumference $=$ $\qquad$

3) C13 ACERT ${ }^{\text {TM }}$ Tier 4 Interim/EU Stage IIIB Engine (located in the Caterpillar Power Systems gallery)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius = $\qquad$
c) Area $=$ $\qquad$
d) Circumference = $\qquad$

- $\mathrm{D}=2 \mathrm{xr}$
- Area of circle $=\pi r^{2}$
- Circumference of circle $=2 \pi r$

## Formulas:

- $\mathrm{Pi}=3.14$

4) Cat® Aftertreatment Technology (located in the Caterpillar Power Systems gallery)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius = $\qquad$
c) $\quad$ Area $=$ $\qquad$
d) Circumference $=$ $\qquad$

5) Tire on the 262C Series 2 Skid Steer Loader (located in the Working as One Dealer gallery)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius = $\qquad$
c) $\quad$ Area $=$ $\qquad$
d) Circumference = $\qquad$

6) Steering Wheel of the 420F IT Backhoe Loader (located on the product floor in the Cat at Work Around the World gallery)
a) $\quad$ Diameter $=$ $\qquad$
b) Radius $=$ $\qquad$
c) $\quad$ Area $=$ $\qquad$
d) $\quad$ Circumference $=$ $\qquad$
