

Petroleum Pumping

with Cat® Engines

POWER TO KEEP YOU MOVING

Pumping is your business, and the productivity of your line is critically linked to the performance of the engines driving your pumps.

Cat® engines for pump packages are built to give you years of continuous, trouble-free performance for applications such as crude transfer, natural gas liquids transfer, and water injection or disposal.

Cat pump drivers have been proven through millions of operating hours on pipeline, field, and associated gases,

and liquids such as distillate diesel, crude, and heavy fuels.

Caterpillar also provides the widest range of packaged generator sets to support electric pumping applications. For locations with potentially explosive atmospheres, Caterpillar is your industry-leading source for hazardous area pump driver solutions.
