

Rail & OTM

Progress Rail Services is an authorized rail distributor for ArcelorMittal (Steelton, PA) and Evraz Rocky Mountain Steel (Pueblo, CO). We carry an extensive inventory at both steel mill locations and can supply customized piece lengths and drilling for your specific requirements. In addition, we stock all types of rail steel grades including AREMA standard and head hardened. For an economical alternative, we offer Industrial Grade rail which is perfect for Shortline Railroads and Industrial applications.

If your need is continuous welded rail, Progress Rail Services Rail Welding Division operates, at each rail mill, a full line welding facility that can weld lengths to your specific needs. Don't have a CWR train? Don't worry, Progress Rail Services operates and maintains a fleet of CWR trains that can transport your welded rail to where you need it.

Our extensive inventory of Other Track Material is located strategically throughout the U.S. and Canada, allowing us to deliver it to you quickly with minimal freight costs
