Engineered for demanding work. The D6R Series III is designed to be productive in a variety of applications. It keeps material moving with the reliability and low operating costs you expect from Cat machines.

---

**Operator’s Station**
The comfortable operator’s station provides an excellent viewing area to the blade and rear of the machine for maximum operator productivity. Controls are low effort and easy to reach. *pg. 4*

**Engine**
✓ ACERT Technology works at the point of combustion to optimize engine performance and provide low exhaust emissions. Matched with the torque divider and power shift transmission, it provides years of dependable and efficient service. *pg. 6*

**Power Train**
The electronically controlled power shift transmission and differential steering work together with the new C9 ACERT engine for maximum efficiency. *pg. 8*

**Integrated Electronic Solutions**
✓ Caterpillar offers technology options such as Product Link and AccuGrade® Grade Control System that provide greater accuracy, higher productivity, lower operating costs and more profitability. *pg. 14*

**Serviceability**
Major components have a modular design for excellent serviceability and fast in-field component exchange. *pg. 15*
**Structure**
A heavy, strong and durable mainframe, strong case steel castings and reinforced frame rails provide durable support to the undercarriage, elevated final drives and other integral frame components.  
*pg. 9*

**SystemOne™ Undercarriage**
✓ With the elevated sprocket design, the final drives are located above the work area, isolating them from ground induced impacts. The different undercarriage configurations allow the machine to be matched to the application needs.  
*pg. 10*

**Work Tools**
✓ Caterpillar® offers a variety of work tools to equip your D6R Series III with the versatility needed to accomplish the job quickly and efficiently.  
*pg. 12*

**Total Customer Support**
Your Cat dealer offers a wide range of services that can be set up under a customer support agreement when you purchase your equipment. The dealer will help you choose a plan that can cover everything from machine and attachment selection to replacement – helping get the best return on investment.  
*pg. 16*
Operator’s Station

The D6R Series III operator’s station is designed for comfort and ease of operation.
Cab. An isolation-mounted, pressurized cab reduces noise and vibration for operator comfort. The cab is pre-wired for a 12-volt or 24-volt radio, equipped with two speakers, an antenna and a radio mount recessed in the headliner.

Clear Working View. The operator has an excellent view to the blade and rear of the machine for maximum productivity. The tapered hood, notched fuel tank and narrow single-shank ripper carriage give the operator a clear line of sight to the front and rear work areas. The large single-pane windows offer excellent viewing to the sides and blade. The low rear window lets the operator see the ripper tip.

Cat Comfort Series Seat. The Cat Comfort Series seat has a thick, contoured cushion, rolled down front edge and is adjustable eight-ways for optimal support and comfort. Seat side bolsters restrain side-to-side movement when working on steep grades or side slopes. The operator can feel the terrain and load on the machine through the seat. The seat and suspension are designed for 10,000-hour life.

Adjustable Armrests. Standard, adjustable armrests provide additional comfort for the operator. Adjustment can be performed without the use of any tools.

In-Dash Instrument Cluster. The instrument panel, with easy-to-read gauges and warning lamps, keeps the operator aware of all system information. All gauges and readouts are easily visible in direct sunlight.

Cat Monitoring System Display. The dash mounted instrument cluster provides on-the-go operating information and gives the operator and service technician insight into the machine’s operation and maintenance needs. The Caterpillar Monitoring System includes:
- Fuel level gauge
- Hydraulic oil temperature gauge
- Engine coolant temperature gauge
- Power train oil temperature gauge
- Engine oil pressure indicator
- Digital readout
- Transmission gear indicator

Heating and Air Conditioning. Conveniently located air circulation vents evenly distribute airflow within the cab. Controls are easily accessible from the operator seat.

Power Converter. The D6R Series III features a 10-amp, 12-volt power converter for the convenient use of radios, wireless phones and laptop computers.

Work Tool Lock-Out Switch. Redesigned from a mechanical rotary switch to an electronic rocker switch, the work tool lock-out valve prevents inadvertent operation of the hydraulic work tool attachments.

Throttle Rocker Switch. With the touch of a finger, the rocker switch activates high or low idle. A decelerator pedal gives the operator full control of engine speed when the rocker switch is in the high idle position. Engine speed can be set between high and low idle by simultaneously using the decelerator pedal and holding the Rabbit side of the throttle switch in for three seconds.

Steering and Transmission Control. Differential steering controls the direction and degree of turns, forward-reverse shifting and gear selection in a single control handle which enhances operator comfort. Touch shift buttons on the steering control shifts the electronically controlled powershift transmission. The tiller allows the operator to work precisely in close areas around structures, grade stakes and other machines with the finest modulation in the industry.

Auto-Shift/Auto-Kickdown. Auto-shift allows the operator to pre-select a forward and reverse gear for easy, efficient directional changes. Auto-shift settings include first forward to second reverse, second forward to second reverse, and second forward to first reverse. Auto-kickdown allows the transmission to automatically downshift when significant load increases are detected.

Dozer Control Lever. The D6R Series III features ergonomically designed dozer controls with low-effort, pilot-operated hydraulics for added operator comfort, easy operation and precise work tool control. When equipped with a VPAT blade, the blade control allows simultaneous six-way control of the blade with a thumb rocker control to adjust blade angle. The dozer control is changed to an electro-hydraulic control when the AccuGrade® Ready Option is installed.

Ripper Control Lever. The ripper control with low-effort pilot-operated hydraulics contributes to operator comfort, easy operation and precise work tool control.
**Engine**

*A combination of innovations working at the point of combustion, ACERT Technology optimizes engine performance while meeting emission regulations for off-road applications.*

---

**Cat C9 with ACERT Technology.**
The Cat C9 is an 8.8 L (537 in³) displacement, six cylinder, in-line configured engine with hydraulically actuated electronic fuel injection or HEUI™. It uses ACERT Technology, a series of Caterpillar engineered innovations that provide advanced electronic control, precision fuel delivery and refined air management, resulting in outstanding performance and lower emissions. The C9 with ACERT Technology meets U.S. EPA Tier 3 and European Union Stage IIIa emissions standards.

---

**Cylinder Block.** Increased block and head material strength minimizes the effect of high cylinder pressure. A strengthened flywheel housing joint reduces leaks. The sculpted heavy-duty design reduces sound and vibration levels. The mid-supported liner has fewer sealing joints for a reduced risk of leaks. The integral oil cooler reduces engine width, weight and potential leaks while improving coolant and oil flow.

---

**Cylinder Head.** A new cross-flow air design with four valves per cylinder and updated port geometry dramatically improve airflow and engine breathability. The cylinder head block features a robust six-bolt design for an improved seal between the head and block at the fire ring which prevents combustion gas leaks. It also minimizes bore/liner distortion. The improved intake port geometry provides a smoother transition and less flow restrictions.

**Fractured-Split Connecting Rods.**
The new fractured-split connecting rods are designed to create near-perfect joint alignment, maximizing rod bearing life. This, in combination with a high efficiency oil filter, ensures long engine life.
**ADEM™ A4 Engine Controller.** The air-cooled ADEM A4 controller is the brain of the engine and contains the engine’s control software. It regulates fuel delivery, airflow and other engine functions. In addition, it directs the HEUI injectors to deliver multiple injections of fuel during the engine’s compression stroke.

**Fuel Delivery.** Multiple injection fuel delivery involves a high degree of precision. Precisely controlling the combustion cycle lowers combustion chamber temperatures, which lowers emissions and optimizes fuel economy. This translates into more work output per unit of fuel.

**HEUI™ Fuel System.** The HEUI fuel system is highly evolved, with a proven record of reliability. HEUI uses the technical advancement of an electronic control system with the flexibility of hydraulically controlled unit fuel injection. The system excels in its ability to control injection pressure over the entire engine operating speed range. These features allow the C9 to have complete control over injection timing, duration, and pressure.

**Air-to-Air Aftercooler.** The air-to-air aftercooler (ATAAAC) brings cool air to the engine which increases life and lowers emissions. In addition, the ATAAC, together with the tight tolerance combustion chamber components, maximizes fuel efficiency.

**Wastegate Turbocharger.** The wastegate allows high-volume exhaust to be routed around the turbocharger to the exhaust piping to prevent wheel spin overspeed at high rpm but low load conditions.

**Service.** The new C9 engine offers easier maintenance and repair through monitoring key functions and logging critical indicators. Electronic diagnostic access is possible with a single tool, the Cat Electronic Technician.

**Advanced Modular Cooling System (AMOCS).** Using a two pass system, the AMOCS radiator provides more efficient heat exchange and improved cooling capacity over the D6R Series II. The coolant is routed from a sectioned bottom tank up the front side, over the top of the core and down the engine side of the core to the bottom tank. This flow pattern allows the coolant to pass through the radiator twice for better cooling.

**Serviceability.** This modular core design permits removal of a single core without removing the entire radiator so repair costs and downtime are reduced. The top tank, side channels and one sealing surface makes AMOCS more reliable and easier to service. A site gauge allows for quick service checks.

**Leak Protection.** To reduce the potential for coolant leaks, brass tubes are welded to a large, thick header to improve the strength of the tube-to-header joint. In conditions where abrasive materials can be airborne, the attachment sand blast grid should be used to prevent core damage.

**Sand Blast Grid.** In an application where airborne debris is prevalent, radiator core protection is a concern. To extend radiator life in harsh applications, a sand blast grid is available as an option to deflect the damaging debris the engine fan propels at the radiator.

**Demand Fan Option.** Based primarily on ambient air temperature, the optional demand fan can improve productivity up to three percent and reduce fuel consumption up to four percent since the demand fan will only run at a speed needed to meet the cooling requirements of the machine. As cooling requirements increase above 24° C (75° F), the demand fan performance converges towards that of the standard fan so lesser benefit is achieved.
Power Train

The power shift transmission and differential steering work in tandem with the new C9 engine to deliver the outstanding power and reliability expected from Caterpillar.

Torque Divider. A single-stage torque divider sends 70 percent of engine torque through a converter and 30 percent through a direct drive shaft for greater driveline efficiency and higher torque multiplication.

The D6R Series III torque divider provides:
- High reliability
- Low dynamic torque
- Optimum combination of operator efficiency and driveline reliability
- Components designed to absorb full engine power

Operating Efficiency and Driveline Reliability. The D6R Series III torque divider attains the best combination of operating efficiency and driveline reliability. It acts as a hydrodynamic component between the engine and transmission to reduce dozing shock loads to the transmission and final drives.

Planetary Power Shift Transmission.
The D6R Series III planetary power shift transmission includes three speeds forward and three speeds reverse and utilizes large diameter, high capacity, oil-cooled clutches. These clutches provide higher torque capacity and increased service life. The planetary power shift transmission offers several key features and benefits, including:
- Electronically controlled modulation system that allows fast, smooth speed and direction changes
- Modular transmission and differential slide into rear case for servicing ease, even when a ripper is installed

Differential Steering System.
Differential steering maintains power to both tracks while turning. The tractor turns when one track speeds up and the other slows down an equal amount. The operator can steer and control the transmission simultaneously, which can reduce cycle times in some applications. The differential steering tiller bar has touch shift buttons for upshifts and downshifts. The tiller bar itself is easily rotated forward or reverse to change the respective tractor direction. It is moved forward to steer the tractor to the left and pulled back to move right. Low tiller bar efforts assure operator comfort during long shifts. Large blade loads can be maneuvered around buildings, bridge abutments, trees or other obstacles. Steering modulation is also optimized for precise control in these applications. Greater load capacity, power and speed control are possible in soft underfoot conditions on steep slopes because both tracks are powered during turns.

Elevated Final Drive. Elevated final drives are isolated from ground and work tool-induced impact loads for extended power train life. The modular design ensures quick and easy service when required.

Load Compensating Shifting.
With load compensating shifting, clutch engagement timing automatically adjusts according to the load factor. This allows improved tractor performance and operator comfort during speed changes and reduces the amount of energy dissipated through the clutches to help extend transmission component life.
Structure

The D6R Series III frame is built to absorb high impact shock loads and twisting forces.

Frame and Castings. The D6R III frame is built to absorb high impact shock loads and twisting forces. The frame has a reinforced saddle and a welded front cross-member that add strength to the frame to better handle lateral and twisting forces. Steel castings augment the strength of the main case.

VPAT Frame. The D6R III VPAT frame has solid side rails to provide a stronger structure. The trunnion joint is located in the saddle to allow the dozer side loads to go into the mainframe instead of through the radiator guard. The reinforced saddle accommodates additional loads through the frame.

Pivot Shaft. The pivot shaft is bolted to the mainframe and connects to the rear roller frames to allow independent oscillation. The pivot shaft distributes impact loads through the case. This design eliminates alignment problems and the need for diagonal braces on the roller frames.

Equalizer Bar. The pinned equalizer bar gives the roller frames the ability to oscillate up or down independently to better match ground contours while providing maximum traction and operator comfort. The redesigned equalizer bar features bolted end pins to offer longer life and reduce downtime. This design also allows for improved serviceability and reliability.
The elevated sprocket arrangements allow optimized balance for the best possible performance in each application.

SystemOne™ Undercarriage

The exclusive SystemOne Undercarriage is designed for reliability and durability by greatly increasing undercarriage life and reducing owning and operating costs.

Master Link. A unique feature of the System One Undercarriage is that, unlike traditional undercarriage, a master style link is not required. This improves track reliability and durability. The unique straight link design allows the track to be taken apart at any joint by using the proper Caterpillar tooling to press the link on or off.

A clamp-style master link is available but not recommended for high impact conditions or machines using wide shoes in these types of applications.

Shoe Selection. Shoe selection is still key to maintaining the proper flotation while using the narrowest shoe possible. There are several sizes in both moderate and extreme service available.

Sealed Cartridge-Style Joints. The all-new cartridge design is factory assembled and sealed for life. A new revolutionary sealing system, synthetic oil, a factory set face load and a newly developed retention system that eliminates endplay are all new features.

Roller Design. The SystemOne™ roller has a taller flange to improve track guiding, especially in side-sloping applications. Advanced features and reduced piece parts enhance the rollers which help eliminate any flexing in the collars and avoid oil loss. The roller is maintenance-free and serviced as a group only. To achieve total balanced wear, carrier rollers with increased wear life are also used.
Center Tread Idler. The SystemOne Undercarriage uses center tread idlers which coupled with new, taller flange rollers, improve guiding and eliminate link scalloping. The center tread idler will increase system life 50 percent or more in most applications since they will last as long as two link assemblies. In combination with the rotating bushing design, the center tread idlers and sprocket segments can be reused through at least two undercarriage lives.

Track Gauge. Wider gauges for the D6R III ensure overall better performance on slopes and make the tractor easier to turn in a variety of applications. Additionally, the gauge changes allow for wider straight shoes on all configurations except LGP VPAT.

Primary Track Guiding. SystemOne track primary track guiding is greatly improved over conventional track guiding. New SystemOne single flange track rollers have a 40 percent increase in flange height which increases roller flange side surface area to greatly improve track retention in the rollers. Only the tall, single flange rollers are offered with SystemOne undercarriage.

Secondary Track Guiding. SystemOne secondary track guiding is improved. The straight track link design eliminates the conventional link pin boss. The fixed track frame guiding surfaces guide directly on the hardened link side rail. The fixed guide wear surfaces are specifically profiled to match the SystemOne track link side rail geometry.
**Work Tools**

*The D6R Series III Work Tools are designed to provide flexibility to match the machine to the job.*

**Cat® Blades.** All blades feature a strong box-section design that resists twisting and cracking. Blades are made of Cat DH-2™ steel that has high tensile strength and stands up to the most severe applications. Heavy moldboard construction and hardened bolt-on cutting edges and end bits add strength and durability.

**Semi-Universal.** The Semi-Universal blade is built for tough applications where penetration and capacity is important. The blade wings are designed for superior load retention and penetration in tightly packed materials.

**Straight Blade.** The S-blade provides good versatility. Since it has less blade capacity, it can handle heavier materials than a larger blade.

**Angle Blade.** The angle blade is secured by outside-mounted pusharms using a pinned connection that allows blade angling and tilting, left or right. Blade angle is changed manually and blade tilt is changed hydraulically.

**Variable Pitch Angle Tilt (VPAT) Blade.** The Variable Pitch Angle Tilt (VPAT) blade allows the operator to hydraulically adjust the blade lift, angle and tilt simultaneously using the ergonomically designed blade control. The operator can also manually adjust blade pitch. The versatility of the VPAT blade gives the D6R III the ability to take on a variety of applications such as finish grading, spreading material, side casting, V-ditching and backfilling. The VPAT blade is available on the XL, XW and LGP configurations and requires either a counterweight or a rear work tool attachment for optimal machine balance.

The new D6R III VPAT blade offers several improvements over the Series II design:

- Manually adjustable blade pitch
- Better cutting edge visibility from operator station
- Improved tilt and angle cylinder lines routing and guarding
- Improved structural durability
- No wear plates required on the radiator guard or main frame

**Site Preparation Arrangements.**

The Ripper Package and Drawbar Package are configured to optimize the performance of the D6R Series III in light to medium duty dozing applications common to site preparation jobs.

Answering a need for a maneuverable tractor with the ability to cut and finish grades, the D6R III gives operators the stability needed when working on slopes. When coupled with the VPAT blade, the D6R III allows for more efficient rough and finish grade in applications such as golf course development and house pad construction.
**L-Shaped Push Arms.** L-shaped push arms bring the blade closer to the machine than diagonal brace designs, providing excellent maneuverability, machine balance and blade penetration. The L-shaped design provides solid lateral stability throughout the life of the machine and better cylinder positions for constant pryout independent of blade height.

**Multi-Shank Ripper.** The multi-shank parallelogram ripper offers the choice of one, two or three shanks depending on job conditions. Curved or straight ripper shanks are available.

**Cutting Edges and End Bits.** High-tensile strength Cat DH-2™ steel cutting edges resist torsional bending and distortion in tough applications. End bits are DH-3™ to provide maximum service life in tough materials.

**Load Sensing Hydraulics.** Field-proven, load-sensing, pilot controlled hydraulics respond to operating requirements by automatically and continually adjusting hydraulic power to maximize work tool efficiency.

**Winch.** A single lever control actuates both clutch and brake functions to improve operator efficiency.
- Input clutches on PTO shaft reduces engine horsepower losses to maintain fuel efficiency
- Clutch engagement and brake release are automatically synchronized for smoother operation
- Winch components can be serviced with winch mounted on the tractor

**Rear Counterweight.** Rear counterweights may be needed to optimize balance for backing up steep slopes or increasing performance in heavy dozing applications. Rear counterweights are recommended if another rear attachment is not specified.

**Drawbar.** The D6R III can be equipped with a drawbar for retrieving other equipment or pulling work tools such as:
- Disks
- Compactors
- Chopper wheels
AccuGrade® Grade Control System.
The AccuGrade System allows operators to grade and fill with increased accuracy without the use of traditional stakes or grade checkers. Using advanced laser or Global Positioning System (GPS) technology, machine-mounted components and an off-board transmitter, the AccuGrade System significantly improves the productivity and accuracy of grading equipment by as much as 50 percent over conventional methods.

AccuGrade System Cost Savings.
Grade is reached in fewer passes so owning and operating costs are reduced. Fewer grade stakes are required and re-staking is virtually eliminated, realizing a 90 percent cost savings. Higher accuracy means savings in imported material. Productivity is increased up to 50 percent and can be maintained all day so more jobs can be scheduled with more scheduling flexibility.

Product Link. The optional Product Link system is a factory installed or easily retrofitted wireless system that simplifies equipment fleet tracking. Using satellite or cellular technology, the system automatically reports key machine parameters such as location, machine hours, active and logged service codes and security alarms. Depending on the Product Link version, it can connect with other on-board systems, issue e-mail or pager alerts and provide fuel consumption data.

Cat Machine Security System (MSS).
MSS uses electronically coded keys selected by the customer to limit usage by individuals or time parameters. MSS deters theft, vandalism and unauthorized usage. Each machine system can store up to 255 keys and each key can be used on as many machines as desired. MSS can be controlled by a Personal Data Assistant. Field installation is available.
Serviceability
Simplified service means more productive uptime.

**Built-in Serviceability.** Major D6R Series III components are made as modules and most can be removed without disturbing or removing others. This means less service time and more productivity.

**Caterpillar Monitoring System.** The D6R III features a flexible monitoring system that is easily upgraded by flashing software. As technology changes and new electronics and software become available, this upgradable monitoring system allows the machine to be easily updated and take advantage of improvements.

The Caterpillar Monitoring System is designed to:
- Allow easy upgrades
- Reduce downtime
- Match software to unique application needs

**Power Train Oil Filter and Pressure Taps.** The power train oil filter and pressure taps are remote-mounted in the right-hand fender. This provides ease of service and aids machine diagnostics.

**Engine Oil Filter.** The engine oil filter is located on the engine for easy servicing access and minimal downtime and is the only engine maintenance item on the right side of the engine compartment. An optional quick oil change attachment can further reduce maintenance time.

**Water Separator and Fuel Filter.** Easily located just inside the engine access panel, the water separator functions as the primary fuel filter, just ahead of the secondary fuel filter. A standard electric priming pump on the primary filter reduces the effort required to prime the system.

**Quick Disconnect Fittings.** Quick disconnect fittings allow for fast diagnosis of the power train and hydraulic oil systems.

**Scheduled Oil Sampling Analysis.** Scheduled oil sampling is made easier through live sampling ports for the engine oil, power train hydraulics and coolant. The ports are also color coded for easy identification of each system.

**Underhood Service Light.** To make nighttime service and maintenance easier, an adjustable service light is located under the hood behind the radiator.
Machine Selection. Make detailed comparisons of the machines you are considering before you buy. How long do components last? What is the cost of preventive maintenance? What is the true cost of lost production? Your Cat dealer can give you answers to these very important questions.

Purchase. Consider the financing options available, as well as the day-to-day operating costs. This is also the time to look at dealer services that can be included in the cost of the machine to yield lower equipment owning and operating costs over the long run.

Serviceability. Quick and easy serviceability means less downtime and more productivity. Sight gauges, filter locations, convenient access to oil and coolant sampling ports and an engine compartment-mounted work lamp make daily and periodic service faster and easier.

Product Support. Nearly all D6R Series III parts can be found at Cat dealer parts counters. Cat dealers utilize a worldwide computer network to find in-stock parts to minimize machine downtime. An exchange program for major components may be available. This will shorten repair time and lower costs.

Remanufactured Components. Genuine Cat remanufactured parts help save money with the same warranty and reliability as new products at cost savings of 40 to 70 percent. Components are available for the drive train, engine and hydraulics.

Parts Pricing. The price of parts can impact the overall owning and operating cost of any piece of equipment and are often overlooked when a purchase is being considered. At several points in the machine’s life cycle, maintenance or repair parts will be required. Parts pricing is all about maximizing the bottom line of the end-user and as a result, Cat parts are priced, on average, 35 percent lower than those of other tractors in this size class.

Resale Value. History has proven, and continues to show, that Cat machines bring a much higher price than other brands when resold. This translates into all Cat equipment owners getting a greater return on their investment than with other brands.

#### Engine

**Engine Model**: Cat C9 ACERT

**Gross Power**: 159 kW / 213 hp

**Net Power – Caterpillar**: 138 kW / 185 hp

**Net Power – ISO 9249**: 138 kW / 185 hp

**Net Power – SAE J1349**: 136 kW / 183 hp

**Net Power – EU 80/1269**: 138 kW / 185 hp

**Net Power – DIN 70020**: 207 PS

Bore: 112 mm / 4.4 in

Stroke: 149 mm / 5.9 in

Displacement: 8.8 L / 537 in³

**Engine ratings at 1,850 rpm**

**Net power advertised** is the power available at the flywheel when the engine is equipped with fan at maximum speed, air cleaner, muffler, and alternator.

**No derating required up to 2286 m (7,500 ft) altitude, beyond 2286 m (7,500 ft) automatic derating occurs**

**Maximum altitude of 3048 m (10,000 ft)**

#### Engine – XL/XW/LGP

**Engine Model**: Cat C9 ACERT

**Gross Power**: 170 kW / 228 hp

**Net Power – Caterpillar**: 149 kW / 200 hp

**Net Power – ISO 9249**: 149 kW / 200 hp

**Net Power – EU 80/1269**: 149 kW / 200 hp

**Net Power – DIN 70020**: 207 PS

Bore: 112 mm / 4.4 in

Stroke: 149 mm / 5.9 in

Displacement: 8.8 L / 537 in³

**Operating weight includes lubricants, coolant, full fuel tank, standard track, cab, hydraulic controls, drawbar and operator.**

**Maximum altitude of 3048 m (10,000 ft)**

#### Hydraulic Controls – Pump

**Pump Capacity at 6900 kPa**: 6900 kPa / 1,001 psi

**Rpm at Rated Engine Speed**: 2125 rpm

**Pump Output**: 217 L/min / 57.3 gal/min

**Lift Cylinder Flow**: 190 L/min / 50.2 gal/min

**Tilt Cylinder Flow**: 80 L/min / 21.1 gal/min

**Ripper Cylinder Flow**: 160 L/min / 42.3 gal/min

**Hydraulic Controls – Main Relief Valve**

| Pressure Setting | 42 000 kPa 6,092 psi |

**Hydraulic Controls – Maximum Operating Pressure**

| Bulldozer | 19 300 kPa 2,799 psi |
| Bulldozer Tilt | 19 300 kPa 2,799 psi |
| Tilt Cylinder | 19 300 kPa 2,799 psi |
| Ripper (Lift) | 19 300 kPa 2,799 psi |
| Ripper (Pitch) | 19 300 kPa 2,799 psi |
| Steering | 40 000 kPa 5,802 psi |

**Ripper**

| Type | Fixed Parallelogram |
| Number of Pockets | 3 |
| Overall Beam Width | 2202 mm 87 in |
| Beam Cross Section | 216 × 254 mm 8.5 × 10 in |
| Maximum Clearance Raised (under tip, pinned in bottom hole) | 511 mm 20.1 in |
| Maximum Penetration | 500 mm 19.7 in |
| Maximum Penetration Force | 6603 kg 14,557 lb |
| Pryout Force | 9134 kg 20,137 lb |
| Weight – With One Shank | 1634 kg 3,606 lb |
| Each Additional Shank | 74 kg 163 lb |

**Standards**

| Brakes | Brakes meet criterion SAE J/ISO 10265 MAR99 |
| Cab | Meets appropriate standards. |

- The operator sound exposure Leq (equivalent sound pressure level) measured according to the work cycle procedures specified in ANSI/SAE J1166 OCT 98 is 76 dB(A) for cab offered by Caterpillar when properly installed and maintained and tested with the doors and windows closed.
- Hearing protection may be needed when operating with an open operator station and cab (when not properly maintained or doors/windows open) for extended periods or in noisy environment.
- The exterior sound pressure level for the standard machine measured at a distance of 15 meters (49.2 ft) according to test procedures specified in SAE J88 APR 95, mid-gear-moving operation, is 86 dB(A).

* Includes push arms, blade, blade tilt cylinder(s), cutting edges and miscellaneous hardware components

** VPAT blade only

† Angle dozers include two tilt cylinders.
Standard Equipment

Standard equipment may vary. Consult your Caterpillar dealer for details.

**ELECTRICAL**
- Alarm, backup
- Alternator, 95-amp
- Batteries, two maintenance-free 12V (24V system)
- Converter, 12V, 10 amp with two power outlets
- Diagnostic connector
- Horn, forward warning

**OPERATOR ENVIRONMENT**
- Air conditioner, under-hood
- Armrests, adjustable
- Cab, ROPS/FOPS, sound-suppressed
- Differential steering control with touch shift
- Electronic distance travel indicator
- Caterpillar Monitoring System:
  - Temperature (coolant, hydraulic, power train), fuel level, tachometer, odometer, gear indicator, and diagnostics
- Foot pads, dash
- Heater
- Hourmeter, electronic
- Mirror, rearview
- Pedal, decelerator
- Pilot operated hydraulic controls with electronic deactivation switch
- Radio ready
- Seat, adjustable, contour suspension with gray fabric
- Seat belt, retractable 76 mm (3 in)
- Throttle switch, electronic
- Wipers, intermittent

**POWER TRAIN**
- Advanced Modular Cooling System (AMOCS)
- Aftercooler, air-to-air (ATAAC)
- Air cleaner, pre-cleaner with strata tube dust ejector
- Air filter with electronic service indicator
- C9 ACERT, diesel, Electronic Unit Injection (EUI)
- Coolant, extended life
- Electronically controlled powershift transmission
  - 3 forward, 3 reverse speeds
- Fan, blower, direct drive
- Final drives, 3-planet single reduction planetary
- Fuel priming pump, electric
- Muffler with mitered stack
- Parking brake, electronic
- Prescreener
- Shift management:
  - Controlled throttle, load compensating
  - Automatic directional and downshift
- Starting aid, automatic ether
- Torque divider
- Turbocharger, waste-gate
- Water separator

**UNDERCARRIAGE**
- Carrier roller (XL, XW, and LGP)
- Equalizer bar, heavy-duty
- Guards, center track guiding (LGP)
- Guards, end guiding
- Idlers – SystemOne, center tread, lifetime lubricated
- Sprocket rim segments, replaceable
- Track adjusters, hydraulic
- Track roller frames, tubular
- Track rollers, lifetime lubricated
- Track, SystemOne, moderate service:
  - Standard arrangement – 560 mm (22”), 39-section
  - XL arrangement – 560 mm (22”), 41-section
  - XW arrangement – 760 mm (30”), 41-section
  - LGP arrangement –
    - 810 mm (32”) offset, 45-section (VPAT models)
    - 915 mm (36”), 45-section (non-VPAT models)

**OTHER STANDARD EQUIPMENT**
- CD-ROM parts book
- Cooler, hydraulic oil
- Engine enclosures, perforated
- Front pull device
- Guards, hinged bottom
- Hood, perforated
- Hydraulic, load sensing, dozer lift and tilt
- Product Link ready
- Radiator doors, hinged, fan blast deflector
- Scheduled oil sampling ports:
  - Engine oil, power train oil, hydraulic oil, and engine coolant
- Tool box
- Vandalism protection:
  - Cap locks for fluid compartments and battery box
Optional Equipment

Optional equipment may vary. Consult your Caterpillar dealer for details.

ELECTRICAL
AccuGrade® Ready Option (Laser/GPS)
Alternator, 150 amp (brushless)
Alternator, 95 amp (ducted)
Lights, supplemental:
- 11 construction (not for VPAT models)
- 11 waste disposal/VPAT package
- 7 (for use with VPAT model)
- 7 (not for VPAT models)
Sweeps
Machine Security System
Power converter
Product Link

GUARDS
Front pull hook, extreme service, sealed
Crankcase – extreme service sound suppressed, sealed
Final drive clamshell
Final drive seals
Fuel tank with or without mechanical winch or ripper
Precleaner
Radiator, bottom heavy-duty
Radiator, heavy-duty, punched (non-VPAT)
Radiator, hinged, two-piece, heavy-duty (non-VPAT)
Radiator, hinged, 2-piece heavy-duty (VPAT)
Rear heavy-duty, transmission
Screen, rear – with ROPS mounted air conditioner
Seals, idler GP
Striker bar GP, front and rear
Sweeps (not compatible with VPAT machines)
SystemOne™
- Guard, track guiding, center (STD, XL, XW)
- Guard, track roller (STD, XL, XW, LGP)

OPERATOR ENVIRONMENT
Air conditioner (ROPS mounted)
Air suspension seat, cloth (for use with cab)
Canopy Arr. (OROPS)
Glass, ultra strength
Seat – vinyl (for use with cab)
Steps, heavy duty grab handles

HYDRAULICS
Ripper
Winch
AccuGrade

RIPPERS
Ripper, multi-shank
Ripper Attachments
- Tooth, D6 multi-shank ripper
- Curved or straight (up to 3)

WINCH ARRANGEMENTS (PACCAR)
Fairlead, 3 rollers
Fairlead roller (4th roller)
Installation arrangement, winch
Winch arr. – slow speed with freespool (slow speed)
or (normal speed)

OTHER ATTACHMENTS
AccuGrade blade kit
Counterweight, rear
Counterweight, additional rear slab
Drawbar, rigid, long or short
Radio, 12V AM/FM cassette
Sound suppression

POWER TRAIN
Drains, ecology (torque converter and transmission)
Fan: Demand (clutch drive), ejector, Flexxaire, or reversible
Grid, radiator core protector
Oil change system, high speed engine and power train
Precleaner: turbine with or without screen, or with prescreener
Radiator AMOCS, waste handling, 6FIN/IN cores;
- abrasion resistant cores
Starting Aids
- Batteries, heavy duty
- Heater, engine coolant
- Thermal shield

UNDERCARRIAGE
SystemOne, Extreme Service (ES), Moderate Service (MS)
Track, Pairs (STD/XL)
- 560 mm (22 in), ES; 610 mm (24 in) MS or ES
Track, Pairs (XW)
- 762 mm (30 in) ES or Trap
Track, Pair (LGP, non-VPAT)
- 914 mm (36 in) ES or Trap
