Bucket

| Bucket Capacity – Front Shovel (heaped 2:1) | 34.0 m³ | 44.5 yd³ |
| Bucket Capacity – Backhoe (heaped 1:1)      | 34.0 m³ | 44.5 yd³ |

Operating Specifications

| Bucket Payload          | 61 tonnes 67 tons |
| Operating Weight – Front Shovel | 590 tonnes 650 tons |
| Operating Weight – Backhoe   | 589 tonnes 649 tons |
The 6060/6060 FS is the most sold 600 t class hydraulic shovel in the world that customers rely on for outstanding productivity. With several upgrades, the 6060 now got heavier and more rigid in 2018. Based on the Caterpillar Continuous Product Improvement process, the Batch 3 update of 2018 introduces an all new Cat Heavy Duty undercarriage and new structural designs for frames and face shovel stick.

With its rated payload of 61 tonnes (67 tons) the 6060/6060 FS is tailor-made to 4-pass load 218-227 tonne (240-250 ton) trucks, like the Cat 793D and 793F or to 5-pass load 291 tonne (320 ton) trucks like the Cat 794 AC. Facilitating higher working speeds with its powerful engine output and efficient hydraulic system, the 6060/6060 FS allows fast cycle times and high productivity.

Every Day Matters, Every Load Counts

We understand the challenges you face, the importance of reliability, and the relationship between uptime and productivity. That’s why we continually strive to produce the safest, most reliable and productive hydraulic mining shovels possible. Offering the widest payload range of any manufacturer in the industry, the ability to optimally pair with our popular line of mining trucks, and the support of our world-class Cat dealer network, we are uniquely positioned to partner with you to help achieve your productivity targets. We understand what matters to you. Our hydraulic mining shovels are built with you in mind. Because in mining, every day matters and every load counts.
Drive System
Balanced Combination of Power and Efficiency

Meeting Your Site Specific Needs
• Durable and Proven Cat 3512C Engines

Offering unsurpassed performance and durability, Cat 3512C engines have been proven to withstand the challenging conditions found at mine sites across the globe. Delivering high power output, proven reliability, and excellent fuel efficiency, 3512C engines keep your primary loading tool producing, while maintaining a low cost of operation, to keep you profitable.
Twin-engine Concept
Stay Up and Running More Consistently

Keep Producing and Ensure the Safety of Your Operators, Even During Single Engine Loss
You will realize enhanced safety, greater uptime, more productivity, and better serviceability as a result of our twin engine concept.

• Enhanced Safety
  The ability to move your shovel to a safe area for repair, away from high walls, blast zones, or other safety hazards, is still possible with the use of a single engine.

• Greater Uptime and More Productivity
  65% of full production can still be achieved with the use of a single engine. This is due to the shovel’s continued ability to exert maximum digging forces, to lower the front attachment without requiring engine power (i.e., pressure-free), and to recuperate energy via its closed-loop swing circuit.

• Better Serviceability
  Troubleshooting is greatly simplified and expedited with the ability to compare one engine versus the other.
Structures
Designed for the Toughest Conditions

Durable Structures
Based upon state of the art engineering and extensive field testing, redesigned structures translate into maximum life expectancy, durability, and reliability.

Highly durable structures reduce your cost per ton by maximizing uptime and productivity – even in the toughest mining conditions.

Redesigned superstructure frame disperses loads better, especially around the boom foot support area and power module mounts. Increased plate thicknesses contribute to improved performance.

Strengthened undercarriage center frame offers higher structural durability through thicker base plates, carrying the enlarged swing roller bearing.

Front Shovel stick is redesigned in key locations to improve the transition of forces through the structure resulting in longer lifetime, improving your bottom line.
Operator Assist – Attachment Control

Protect Your Largest Asset

Operate your Equipment with Confidence
Cat Operator Assist helps your operator to efficiently utilize the loading tool by improving machine controllability and actively reducing linkage and cylinder mechanical contact, thereby reducing maintenance costs and TCO.

These enhancements allow the operator to confidently load material reducing operator fatigue, improving durability and reliability, all while maximizing the usable linkage range.

System Details
The new calibration procedure will enhance the controllability of the linkage through improved joystick and implement valve calibration.

Furthermore, the Operator Assist (OA) control system will reduce impacts by calculating the linkage position and decelerating the linkage to avoid mechanical contact.

Contacts reduced by OA:
- Mechanical contacts with linkage stops
- Bucket cylinder end-stroking
- Stick cylinder end-stroking
- Boom cylinder end-stroking
TriPower System
Superior Digging Capability and Bucket Fill Factors
Dig More Effectively with Our Unique TriPower Front Shovel Design

You will experience safer, easier and faster front shovel operation with TriPower, a system proven on over a thousand Cat hydraulic mining shovels worldwide. Generating superior mechanical leverage and control, our FS configured hydraulic mining shovels utilize a unique boom design that employs rotatable triangular rockers. This design facilitates quicker cycle times, increased effective lifting force, constant boom momentum, automatic constant bucket angle, and automatic roll-back limiter.

• **Quicker Cycle Times**
  – Faster lifting speeds are achieved, because the design enables the use of smaller-diameter boom cylinders.

• **Increased Effective Lifting Force**
  – Design transfers digging forces into the superstructure, creating supporting boom momentum in addition to momentum that is generated hydraulically.

• **Constant Boom Momentum**
  – Allows smaller boom cylinders for higher lifting speed.
  – Keeps lifting speed constant.
  – Enables the shovel to lift a single load along the entire digging distance.
  – No retracting of stick cylinders is required, ensuring that all hydraulic pumps are supplying the boom-up function.

• **Automatic Constant Bucket Angle**
  – Material spillage is avoided during boom lifting, because the filled bucket automatically maintains a constant bucket angle.
  – On conventional kinematics the operator has to control manually the bucket position during lifting which cut in half the available oil flow for the boom cylinders.

• **Automatic Roll-back Limiter**
  – Preventing material spillage back on to the operator’s cab and machine superstructure, our system ensures that the bucket is always in a safe position, without operator control/manipulation, when it is at maximum height.
  – The boom cylinder continues to receive maximum oil flow, because the operator does not need to activate the bucket cylinder.
Hydraulic System
Easy Serviceability and Greater Productivity

Straightforward, Safe System Maintenance
Ensuring neat organization for safe operation, easy inspection, and fast service, and reducing the number of hoses needed, the main valve block is located on top of the boom.

Faster Cycle Times
Faster cycle times are realized, because float valves are used to lower the boom instead of engaging pumps. This facilitates faster boom movements and allows other operating functions to occur simultaneously, such as bucket curl and stick in/out.

Greater Control
Your operators will experience greater control with our five circuit hydraulics, allowing for two cylinder motions, two travel motions, and swing to be controlled simultaneously.
Independent Oil Cooling System
More Effective Oil Cooling for Extended Component Life

Protect and Extend the Life of Your Hydraulic Components and Seals
Providing a more efficient means of cooling, particularly in demanding applications, our unique independent oil cooling system will extend the life of your hydraulic mining shovel’s components.

More Efficient Oil Cooling
Our system is independent of return oil, achieving efficiency through the utilization of dedicated pumps that provide cooling capacity as needed, whether the engine is idling or under load. That means optimum oil temperature is being maintained, even while your operator waits for the next truck to load. Competitive hydraulic mining shovels only provide cooling when the machine is working and the engine is under load.

Additional efficiency is achieved via our thermostatically controlled radiator fan speed. The fans do not run until oil temperature exceeds a temperature of 50° C (122° F), saving energy.

Optimal Oil Temperature Maintained
The highly efficient oil cooling system ensures that the oil temperature is only 25° C to 30° C (45° F to 54° F) higher than the ambient temperature. Thus the hydraulic oil working temperature remains within the optimal operating viscosity range of 50° C to 70° C (122° F to 158° F).
Experience Improved Machine Control and Component Life, while Reducing Fuel Consumption and Noise Emission, with Our Intelligent Pump Managing System

Delivering optimal performance, our pump managing system continuously evaluates actual engine and hydraulic operating values against set values, and adjusts pump output accordingly. This results in efficient use of the engine for greater productivity.

Pump managing system advantages include:
• Best possible utilization of engine output and engine overload avoidance via electronic load limit regulation
• Less energy consumption and less thermal load on hydraulic oil with zero oil flow regulation for main pumps
• Less fuel consumption and lower noise emission via automatic RPM reduction
• Reduced component wear and lower noise emission with automatic oil flow reduction for closing/opening of bucket clam
• Protection of components with automatic oil flow reduction if hydraulic and/or engine coolant temperature exceed set maximum
• Improved operator control response via on-demand pump flow
Load More Material, at Lower Cost, with the Energy Recovery Capability of our Closed-loop Swing System

Delivering faster cycle times and improved energy efficiency, while also generating less heat, our closed-loop swing circuit provides distinct advantages over competitive machines utilizing open-circuit swing systems.

Greater Efficiency Via Energy Recovery
Kinetic energy captured during the swing motion is fed back into the system during deceleration, providing more power to drive the main and auxiliary pumps. Energy is saved during deceleration, because braking occurs via counteracting controls, as opposed to throttles used in open circuit swing systems.

Energy Savings During Acceleration
Energy is saved during acceleration via torque control, providing a pressure balance valve that controls the swing pump against pressure in the closed-loop swing circuit, ensuring that only the minimum necessary oil flow is utilized at any given time.

Faster Cycle Times
Faster boom lift motion during swing is achieved with our closed-loop swing system, increasing overall productivity.
Get Peak Operator Performance with Our Safe and Comfortable Operator’s Cab

We understand that the most important factor in your hydraulic shovel’s effectiveness is the performance of its operator. To help make their workday as productive as possible, we’ve incorporated safety and comfort features into the 6060/6060 FS operator’s cab.

Protection for Your Operator; Every Day, Every Shift
• Safety glass is used for all cab windows, and armored glass for the windshield.
• Operator’s seat is equipped with integrated safety switch that automatically neutralizes the hydraulic controls when the operator leaves the seat.
• Position of cab module, approximately 7.6 m (24 ft 11 in) high, provides excellent visibility of the digging and loading areas.
• Cab meets Operator Protective Guard standard ISO 10262:1998 (Top Guard).

Supporting Peak Operator Performance with Comfort Features
• Pneatically cushioned, multi-adjustable operator’s seat.
• Large, transflective color touch-screen display (BCS III) provides vital machine monitoring and diagnostic data for convenient troubleshooting and service assistance.
• Enhanced control response and servo adjustment capability via electro-hydraulic servo control.
Electronic Control System
Operate with Confidence

Enhanced Control Response and Optimized Hydraulic Engine Load Management
Help your team meet productivity and performance standards with our intuitive, informative on-board electronics.

Electro-Hydraulic Servo Control
• Enhanced Control Response
  The system relays actuating signals from the joysticks, delivering fast and precise machine reactions that reduce operator fatigue.

• Increased Uptime
  Uptime is increased as a result of simplified troubleshooting and advanced diagnostic capabilities.

• Greater Operator Comfort
  Easier setting of servo control characteristics allow operators to adjust to their preference.

• Clean and Quiet Cab Environment
  No hydraulic lines are present in the cab or the cab module, ensuring a clean arrangement with less noise emission.

Control and Monitoring Platform (CAMP)
• Reduced Control System Inventory
  Streamlined system requires only one type of controller for each function (i.e., left side drive train, right side drive train, servo, and auxiliary) reducing the number of required controllers in the system and associated replacement stock.

• Less Fuel Consumption
  Engine works in optimal range of performance during the entire digging cycle, reducing fuel burn.

• Increased Component Life
  Reduced hydraulic pulsation lessens stress imposed on the engine and hydraulic components.

• Enhanced Operator Comfort
  Less vibration and more even machine movement via reduced pressure peaks.

• On-screen Documentation
  The Parts book, Technical handbook, and Operating handbook, as well as hydraulic and electric schematics, are available in electronic format.
Helping You Enhance Safety and Productivity through Technology
Aimed at enhancing the productivity and profitability of your hydraulic mining shovel, we currently offer a combination of Cat MineStar System offerings and Cat hydraulic mining shovel technology solutions.
Cat MineStar System

Helping you achieve your goals for enhanced mine site safety, improved efficiency, reduced operating costs, and greater profitability, the Cat MineStar System provides the most comprehensive suite of mining technology products in the industry. It consists of a number of configurable capability sets – Fleet, Terrain, Detect, Health, and Command – that allow you to scale the system to your mine site needs. Cat MineStar System helps you manage everything from material tracking to sophisticated real-time fleet management, machine health systems, autonomous equipment, and more.

The Cat 6060/6060 FS is able to utilize the following Cat MineStar System capability sets:

- **Fleet**
  Fleet provides real-time machine tracking, assignment and productivity management, providing a comprehensive overview of all your asset operations from anywhere in the world.

- **Terrain**
  Terrain enables high-precision management of drilling, dragline, grading and loading operations through the use of guidance technology. It increases machine productivity and provides you real-time feedback for improved efficiency.

- **Detect**
  Detect helps increase operator awareness, enhancing safety at your operation. It includes a range of capabilities designed to assist the operator, including blind spot and proximity detection of fixed and mobile equipment.

- **Health**
  Health delivers critical event-based machine condition and operating data for your entire fleet. It includes comprehensive equipment health and asset monitoring capabilities, with a wide range of diagnostic, analytic and reporting tools.

Hydraulic Mining Shovel Technology Solutions

- **Monitoring and Diagnostic System**
  Enhancing diagnostic capabilities and providing detailed troubleshooting functions, our Board Control System uses sensors throughout the machine to monitor operating data, record faults, and notify the operator audibly and visually. This promotes the earliest possible detection of faults and allows for timely maintenance planning and assistance for speedy repair.
Loading/Hauling Efficiency
Move More Material with Optimal Pass Match Pairings

Achieve Targeted Loading/Hauling Production with Perfectly Paired Cat Hydraulic Mining Shovels and Mining Trucks

For full truck payloads with minimum loading time, an efficient loading/hauling system begins with an optimized equipment match. Cat hydraulic mining shovels are matched with Cat mining trucks to maximize volume of material moved at the lowest operating cost per ton.

6060/6060 FS Pass Match with Cat Mining Trucks

Rugged Front Attachment Options Designed and Fabricated to Withstand Your Extreme Mining Conditions

To extend service life and ensure that your shovel keeps producing, our front shovel attachment structures are designed for durability and dependability. Extended performance in the harsh mining conditions you face daily is accomplished through selection of high-strength steels and rugged castings, joined and thermally stress-relieved, to help you achieve your productivity targets.

Front Attachment Structures Include:
- Heavy castings at all pivot points
- Better flow of forces and less welding seams, as top chords are made of one bend plate
- Entire boom and stick are stress-relieved after welding
- Welding procedures allow for internal welding (double prep weld)
Swing System
Longer Component Life for Better Swing System Reliability

More Reliable Swing Component Life
Extending component life and ultimately improving machine uptime, our swing system includes a triple-race swing roller bearing with internal gearing connected to an automatic lubrication system.

For added reliability, all lube lines are located inside the roller bearing for maximum protection.

Service Friendly
Easier maintenance is afforded by the free accessibility of swing gears and rotary distributor.
Less Wear and Tear on Crawler Components
With the three batch updates Caterpillar introduces an all new Cat Heavy Duty undercarriage for the 6060 Hydraulic Mining Shovel.

Undercarriage
Tough and Long-lasting

Key Features of the Cat 6060 Heavy Duty Undercarriage
• Designed for high-travel applications.
  – Significant tramming range increases without over-heating will improve productivity and lower operating costs.
  – Eliminates complex central lubrication system with a maintenance free, oil filled, sealed-for-life design.
• Cat exclusive sealed for life roller and idler system minimizes operating temperatures with reliable sealing and maximum roller and idler life.
  – Cat Duo-Cone™ Seals help ensure lifetime lubrication to extend life.
  – Cat HD tracks are through hardened for long wear life, unmatched structural support, and resistance to deformation.
• With over 100 years of undercarriage innovation, you can count on Cat undercarriage parts to get the job done.
  – Caterpillar manufactured and quality tested to ensure productivity and performance.
Safety
Designed with Your Safety as Our Top Priority

Sharing your commitment to safety, and driven by our commitment to Zero Harm, we work tirelessly to design the safest machines possible to protect your most important asset; your employees. That is why we updated the design of the 6060/6060 FS in accordance with the principles of MDG 41 and 15, and offer this standard, not as an option or upgrade.

Some examples of the safety-enhancing features of the Cat 6060/6060 FS hydraulic mining shovel include the following:

Machine Access
• All stairways have 45° angle for safe and comfortable access and movement about the machine.
• Slide down emergency egress ladder directly adjacent to the operator’s cab.
• Hydraulically operated boarding ladder with emergency lowering via nitrogen accumulator ensures that ladder remains operational even when engines shut off.
• Machine swing and propel capability is switched-off when ladder is in down position.

Service and Maintenance
• Improved routing and clamping of hydraulic hoses.
• Hydraulic hoses and electrical wiring are separated from each other for fire prevention.
• All service areas are accessible via anti-slip walkways, and trip hazards are minimized.
• All hot surfaces are covered to prevent burns.

Electrical System
• Cabinet with battery isolation switch, mounted on top deck directly above the battery box, allows quick and easy shut-off of voltage on the entire shovel.
• Cabinet contains a starter isolator which allows on-board voltage, but prevents starting of engines.

Emergency Shut-offs
• An easily accessible, standard shut-off switch located in the cab shuts down the electrical system in case of emergencies.
• Additional shut-off switches are located on the machine, in the machine house or accessible from the ground with pull ropes.

Precise Bucket Control
• Minimizing the potential for material spill on to the attachment or cab, the TriPower automatic roll-back limiter prevents the bucket from being curled back too far.
Lowering your operating costs and maximizing your hydraulic mining shovel’s uptime and productivity is of supreme importance to us. To that end, we’ve made vital components more accessible and designed simpler systems to make maintenance activities quicker and easier.

**Open, Spacious Access to Components**
- Facilitating easier maintenance, exceptional accessibility is provided to systems like the swing motor, swing gearbox and rotary distributor in the well organized superstructure. The engine is accessible from both sides.
- Easily accessed by walkways on both sides, the boom-mounted main valve block, a feature unique to Cat hydraulic mining shovels, provides a clean layout and reduces the number of hoses leading from the superstructure to the attachment.

**Simple Hydraulic System with Main Valve Block Positioned on Boom**
- Ensuring neat organization for safe operation, easy inspection and fast service, the design of our hydraulic system significantly reduces the total number of frequently moving hoses from the superstructure to the attachment.
- Longer hose life via improved routing in accordance with MDG design standards.

**Easy Ground-level Fuel and Fluid Replenishment**
- Quick fuel and fluid replenishment is made easy with a retractable service station underneath the engine module, accessible at ground-level.

**Improved Drive Train Troubleshooting**
- Twin-engine design facilitates troubleshooting of drive trains, as one engine can be compared to the other.
Commitment Makes the Difference
Cat dealers offer a wide range of solutions, services and products that help you lower costs, enhance productivity and manage your operation more efficiently. From the time you select a piece of Cat equipment until the day you trade or sell it, the support you get from your Cat dealer makes the difference.

Dealer Capability
Cat dealers provide the level of support you need, on a global scale. Dealer expert technicians have the knowledge, experience, training and tooling necessary to handle your repair and maintenance needs, when and where you need them.

Product Support
When Cat products reach the field, they are supported by a worldwide network of parts distribution facilities, dealer service centers and technical training facilities to keep your equipment up and running.

Cat customers rely on prompt, dependable parts availability through our global dealer network, ready to meet your needs 24/7.

Service Support
Every piece of Cat equipment is designed and built to provide maximum productivity and operating economy throughout its working life. Cat dealers offer a wide range of service plans that will maximize uptime and return on your investment, including:
- Preventive Maintenance Programs
- Diagnostic Programs, such as Scheduled Oil Sampling and Technical Analysis
- Rebuild and Reman Option
- Customer Support Agreements

Application Awareness
Operating and maintenance costs are influenced by many application and site-specific factors, such as: material density and fragmentation, payload, bench height, truck positioning, ground conditions, amount of traveling and maintenance. Your Cat dealer can provide you with an understanding of the effects application characteristics and operating techniques have on maintenance and operating costs.

Operation
Your Cat dealer can arrange training programs to help operators improve productivity, decrease downtime, reduce operating costs and enhance safety.
# General Data

**Operating Weight**
- **Face Shovel**: 590 tonnes (650 tons)
- **Backhoe**: 589 tonnes (649 tons)

**Engine output SAE J1995**
- **Cat 3512C**: 2236 kW (2,996 hp)

**Standard bucket capacity**
- **Face Shovel (heaped 2:1)**: 34.0 m³ (44.5 yd³)
- **Backhoe (heaped 1:1)**: 34.0 m³ (44.5 yd³)

**Features**
- TriPower shovel attachment
- Independent oil-cooling system
- Spacious walk-through machine house
- 5-circuit hydraulic system
- On-board electronics system: Control and Monitoring Platform (CAMP)
- Board Control System (BCS)
- Operator Assist (OA)
- Torque control in closed-loop swing circuit
- Automatic central lubrication system
- LED working lights

- Pump Managing System contains:
  - Electronic load limit control
  - Flow on demand from main pumps depending on joystick position
  - Automatic regulation of main pumps to zero flow without demand
  - Automatic rpm reduction of engine speed during working breaks
  - Reduced oil flow of main pumps at high hydraulic oil temperature or engine temperature
- Pressure cut-off for main pumps
- Cooling of pump transmission gear oil
- Filters:
  - Full-flow high-pressure filters (100 μm) for the main pumps, installed directly behind each pump
  - High pressure filters (200 μm) for the closed swing circuit
  - Full-flow filters (10 μm) for the complete return circuit
  - Pressure filters (40 μm and 6 μm) for servo circuit
  - Pressure filters (40 μm) for the feed pumps of the closed swing circuit
  - Transmission oil filters (40 μm)

### Swing System

</table>

- Closed-loop swing circuit with torque control
- Hydraulic braking of the swing motion by counteracting control
- All raceways and the internal gearing of swing ring, supplied by automatic central lubrication system
- Dirt wipers at swing ring to prevent build-up of debris between swing ring and carbody

### Retractable Service Station

Retractable service station installed underneath the engine module and easily accessible from ground. Equipped with:
- Quick couplings for:
  - Diesel fuel
  - Engine coolant – left/right
  - Pump transmission gear oil – left/right
  - Engine oil – left/right
  - Hydraulic oil tank
  - Grease container
- Cat jump-start socket
- Indicator lights for fuel tanks left/right full and grease container full

### Hydraulic Oil Cooling

- Cast double-grouser combined pad links with bushings connected by hardened full floating pins
- All running surfaces of sprockets, idlers, rollers and pad links, as well as teeth contact areas of sprocket and pad links, are hardened
- Bottom rollers are connected to the automatic lubrication system
- Fully hydraulic, self-adjusting track tensioning system with piston accumulator
- Automatic hydraulic retarder valve to prevent over-speed on downhill travel
- Acoustic travel alarm

### Attachments

- Booms and sticks are torsion-resistant, welded box design of high-tensile steel with massive steel castings at pivot areas
- Welding procedures allow for internal counter-welding (double prep weld) wherever possible
- Booms and sticks are stress-relieved after welding
- Catwalks with rails at booms
- Inspection holes in booms (FS and BH) and stick (FS)
- Guards for shovel cylinders (FS)
- Pressure-free lowering of boom (FS and BH) and stick (FS) by means of a float valve
- Shovel attachment with unique TriPower kinematics ensuring the following main features:
  - Horizontal automatic constant-angle bucket guidance
  - Vertical automatic constant-angle bucket guidance
  - Automatic roll-back limiter to prevent material spillage
  - Kinematic assistance to hydraulic forces
  - Constant boom momentum throughout the entire lift arc
  - Crowd force assistance
- All buckets (FS and BH) are equipped with a wear package consisting of:
  - Special liner material covering main wear areas inside and outside of bucket
  - Lip shrouds between teeth
  - Wing shrouds on side walls
  - Heel shrouds at bottom edges
- Special wear packages for highly abrasive materials on request

Optional Equipment

Optional equipment may vary. Consult your Cat dealer for details.

**GENERAL**
- Custom paint

**SUPERSTRUCTURE**
- Hydraulic service crane on superstructure with auxiliary engine
- Oil change interval extension for engine oil up to 500 hours
- Two round containers for two standard 200 L (53 gal) barrels (instead of 1000 L (264 gal) grease container)
- Various cold-weather options

Additional optional equipment available on request.

**CAB**
- Dual (redundancy) heating ventilating and air conditioning system
- Cab heating
- Camera monitoring system

**UNDERCARRIAGE**
- Track pad width 1600 mm (5 ft 3 in) or 1800 mm (5 ft 11 in)
- Cover plate under carbody (belly plate)
