

## ADVANCED LOGISTICS MANAGEMENT

Machinery renewal and upgrades from Solar Turbines ensure our customers' equipment continues to meet their high expectations in today's challenging business environment. We help older packages last longer, produce more, and achieve the latest standards of performance, efficiency, safety and compliance. With more than 65 years of operating experience in the gas turbine market, more than 15,000 units installed worldwide, and approximately 1000 overhaul exchanges performed per year, our Customer Services team is unrivaled in its technical knowledge and dedication to support Solar's products.

When it's time for an engine exchange or overhaul, our Advanced Logistics Management team is available to provide assistance. We can offer pickup service of the core engine from the customer's operational site. Solar can also provide "first meter" handling services immediately upon the change-out event which may include crating/packaging, managing freight forwarding from site to port of export, and export process management with documentation and payment of applicable fees. Solar can provide assistance for international shipments including coordination of international freight movement, customs clearance including processing applicable duties or taxes, and delivery from port of import to Solar facility.

The Advanced Logistics Management program supports all Solar's products from Saturn® through Titan™ 250.

### Key Benefits

- Operational Efficiency: By leveraging Solar's global logistics network, our customers can increase their operational efficiencies and improve employee utilization by transferring a non-value added and potentially non-core competency activity to Solar.
- Seamless Project Execution: Our experience and extensive resources ensure our customers receive seamless execution from Solar's team of dedicated logistics management, legal and global trade compliance organizations.
- Flexibility: Solar has different options available based on our customer's individual requirements.
- Efficient Cooperation: Solar has expertise gained from overhauling and transporting our gas turbines for more than 65 years, optimizing cooperation between Solar and our customers.
- Cost Optimization: Solar can provide these value-added services through the utilization and buying route of both Solar and Caterpillar global carrier network.
- Regional Support: We support our customers all around the globe, currently coordinating imports and exports in 150 countries.

### Additional Information
