

CAT® TERRAIN FOR LOADING

3 WAYS TO BOOST PRODUCTIVITY ON EVERY PASS WITH CAT® TERRAIN FOR LOADING UPGRADES

You already know how Cat® Terrain for loading can help you plan your work, then work your plan more efficiently. The latest upgrade offers even more to help you hit your targets every time. Check out these three new productivity-boosting features for your electric rope shovels, large wheel loaders and excavators.

1

SEE DIPPER POSITION, DIPPER WEIGHT & TRUCK PAYLOAD IN REAL TIME

Proven technology integrated into 7495 electric rope shovels enables real-time views of dipper position, dipper weight and truck payload from the shovel. Continuous dipper position increases precision in material identification, a bonus for smaller ore body boundaries. And increased payload accuracy results in correct production recording.

2

FULLY AUTOMATE BLENDING & IMPROVE PRODUCTION TRACKING

The combination of fully automated blending and improved production tracking delivers big wheel loader productivity gains. Complete automation of 3D grade block information improves operator efficiency, eliminating the need for manual office updates while minimizing misdirected loads. Machines automatically load 3D blocks based on location—in the pit, at the stockpile or at the ROM pad. At the same time, production tracking gives you the ability to monitor material trammed to the crusher or loaded into trucks during ROM pad/stockpile operations. Automatic material control helps ensure accurate stockpile definitions.

3

GET THE MOST ACCURATE COLLISION AVOIDANCE SYSTEM FOR TRUCK & SHOVEL INTERACTION

An updated Proximity Awareness system provides the highest level of accuracy in the industry, reducing false alarms when it comes to avoidance zones around your shovels and excavators. There's no longer a single fixed polygon around the boom, improving boundaries for maximum to minimum bucket extension and offering a better fit for close work operations.

2 WAYS TO SAVE

For a limited time, we're offering two special promotions to make upgrading to the latest Cat Terrain for drilling even more affordable.

LOW
UPFRONT
COSTS

SAVE
24-28%
OFF THE
STANDARD PRICE

when you upgrade now—and
get credit for your next display
if you're within 24 months of the
next upgrade.
