

OVERVIEW

Our Innovative Adjustable Clamptite brace has been proven to have five times more holding power than any other boltless adjustable brace currently available.

While traditional rail braces can be pulled out during handling, Progress Rail's Clamptite brace has the holding power to greatly reduce the potential for rail disengagement when loading, moving or tamping.

CLAMPTITE ADJUSTABLE

FEATURES AND BENEFITS

- Brace and retention block run adjacent to the rail increasing holding power
- For use with rail sections 115 and higher
- Double wedge action for lateral and vertical holding power
- Brace design allows for use of standard switch heater rods
- Serrated contact surfaces are secured with a standard e-clip and positioned directly over the rail base for greater vertical restraint
- The restraining block has a built in anti-overdrive feature to prevents the clip from being driven too far.
