

6 WAYS USING CAT® CONNECT CAN HELP YOU IMPROVE PERFORMANCE

Power is the lifeblood of your business. Using equipment data to manage your fleet will help ensure high system performance and more efficient and reliable power production.

- 1 MONITOR GENERATOR SET LOAD**

Use equipment data to ensure individual units are properly loaded and that you have the optimum number of units online to meet your power requirements.
- 2 PROPER FLEET USAGE**

Monitor run hours and fuel consumption to keep usage across your fleet consistent and manage maintenance and overhaul intervals.
- 3 GET THE BIG PICTURE**

Bring all your fleet data together in one place. Getting a big-picture fleet overview can help you eliminate duplicated efforts and inefficient maintenance practices, improve processes, and identify technician development needs.
- 4 PLAN SERVICE TO AVOID SURPRISES**

Use inspections, equipment performance data, fluid sampling, and electronic alerts to catch problems early. Scheduling repairs early helps avoid breakdowns and performance issues like excess oil consumption or inability to operate at rated load.
- 5 IMPROVE OPERATOR TRAINING**

Train your operators to pay attention to equipment alerts. Quick action can help keep your equipment from experiencing extended downtime.
- 6 READY-TO-RUN**

Use electronic alerts to ensure that your asset will start and perform when required.
