### MOUNTING AND DISMOUNTING

- Mount or dismount the machine only at locations that have steps and/or handholds. Before you mount the machine, clean and inspect the steps and handholds. Make all necessary repairs.
- Always face the machine whenever you get on or off the machine.
- Maintain three-point contact with the steps and with the handholds. (Three-point contact can be 2 feet and 1 hand or 1 foot and 2 hands).
- DO NOT mount or dismount a moving machine. Never jump off the machine. Do not carry tools or supplies when you try to mount the machine or when you try to dismount the machine.

### BEFORE STARTING THE MACHINE

### STARTING THE MACHINE

- Turn the battery disconnect switch ON (if equipped)
- Adjust seat for proper height and pedal reach
- Inspect, adjust, and fasten seat belt
- Inspect, adjust mirrors
- Make sure steering frame lock is in UNLOCKED position
- Ensure the parking brake is engaged
- Engage the steering and transmission integrated control (STIC) lock
- Place all hydraulic controls in the HOLD position
- Move transmission control to the desired position
- Ensure all personnel are clear of machine, sound horn
- Turn key start switch to ON
- Observe instrument cluster self-diagnostic test
- Turn the key start switch to START, crank engine

### MACHINE WARM-UP

- Allow machine to warm up (per O&MM)
- The implement lockout must be in the UNLOCKED position before hydraulic controls will function
- Engage and disengage attachment controls to help speed up warmup of hydraulic components
- Cycle all controls to warm oil to circulate through all hydraulic cylinders and lines
- Perform steering, service brake, and parking brake operation checks (as per O&MM by machine model)
- Check secondary steering operation (if equipped)
- Check gauges, indicators, and action light frequently

## MOVING THE MACHINE

- Make sure area is clear by sounding horn and waiting 3-5 seconds before moving machine
- Raise all lowered implements
- Depress the service brake pedal
- Release the parking brake
- Move transmission control to desired direction
- Release service brake pedal
- Depress accelerator

## MACHINE SHUT DOWN

- Park machine on smooth, level area
- Apply the service brakes to stop the machine
- Move the direction control switch to NEUTRAL
- Engage the parking brake
- Lower all hydraulic implements
- Run engine at idle for 5 minutes to allow engine to cool
- Turn key start switch to OFF and remove key
- Utilize correct delayed engine shutdown procedure if equipped
  
  **Note:** Overriding delayed engine shutdown may reduce engine & machine system component life
  
  Use for emergency situations only

- Turn battery disconnect switch to OFF
- Do not turn off the battery disconnect switch until the “wait to disconnect” lamp has turned off.
  
  If the switch is turned off when the indicator lamp is illuminate the Diesel Exhaust Fluid (DEF) system will not purge the DEF. If the DEF does not purge, DEF could freeze and damage the pump and lines (if equipped).

- Dismount machine using 3-point contact
- Block wheels and remove disconnect switch key if parking for extended period
- Conduct post-operation walk-around inspection
