Well prepared.

For stage 5.

Your partner.

For stage 5.

In the framework of the Directive 97/68/EC, from 01.01.2019 onwards, stage 5 will be implemented. According to this, the emission of particles and nitrogen oxides will again be drastically reduced.

With Perkins and BU Power Systems, you can benefit from a strong partnership and a good network with excellent expertise that can draw on many years of experience.

Expertise.

For good service.

Perkins engines are adapted to the latest challenges using exhaust aftertreatment systems among other facilities. This allows us to support you during the design and implementation of engines in your machines through to the CAD-assisted integration workshop.

We also offer solutions for the electrical and mechanical integration of your engines, for example with SAE J1939 CAN bus control or by integrating customised cable harnesses.

Your benefits at a glance

- Shorter development times
- Tailored, individual technical solutions
- Documented installation audit
- Competent accompaniment for your series production
- Full-coverage, professional service network
