A complete industrial engine range for your market and machine

At Perkins, we offer a full range of diesel engines for the off-highway market. Together, we are able to support you with the knowledge, capabilities and global resources you need to streamline your machine development process and deliver your business strategy.

If you have any questions, or need more information about any of the Perkins products, please visit us at www.perkins.com

Perkins delivers a full portfolio of engines across the 8.2 – 597 kW power range

Whatever your needs, we have an engine

Our engine platforms are specifically designed to meet your strategic and commercial requirements. We know what it takes to help you to create more differentiated and competitive machines, as well as to reduce the time and costs involved in bringing a new product to market.

In order to minimise business complexity and to help you drive growth through more affordable and profitable access to new markets, we’ve developed a modular engine architecture that not only delivers the right value and performance but enables you to develop single-machine designs adaptable to multiple emissions standards.

Perkins delivers a full portfolio of engines across the 8.2 – 597 kW power range

A stronger platform for growth

Whatever your needs, we have an engine

Our engine platforms are specifically designed to meet your strategic and commercial requirements. We know what it takes to help you to create more differentiated and competitive machines, as well as to reduce the time and costs involved in bringing a new product to market.

In order to minimise business complexity and to help you drive growth through more affordable and profitable access to new markets, we’ve developed a modular engine architecture that not only delivers the right value and performance but enables you to develop single-machine designs adaptable to multiple emissions standards.
Designed to drive your business

Perkins offers a complete suite of engine platforms across the entire 8.2 – 597 kW (11-800 hp) power range. Not only does this help you to simplify and streamline your supply chain, but our advanced system design also enables global coverage for your machines and compatibility with regional requirements.

With every Perkins engine, quality, reliability and consistency are assured. Our facilities worldwide employ the same efficient processes, the same tested and validated components, and the same stringent quality controls you need to achieve your global product strategy.

One global partner

Perkins engines are trusted by OEMs worldwide, however we are far more than an engine manufacturer. We are here to support you at every stage of the machine development process with an unmatched breadth and depth of hardware, knowledge and global resources.

As your specialist partner, our engineers are on hand to work closely with you to understand your requirements and overcome your challenges, for example with technical integration workshops and installation expertise. We also have the right network in place to deliver global product support as an extension of your aftermarket service, helping you to reduce operational costs and increase customer loyalty.

Notes:
- The table shows industrial variable speed power ratings only and excludes ratings for electric power applications.
- The table only shows the highest rating that is available for new machine projects. Alternative power ratings are available.
- Your Perkins distributor can advise on the optimum power choice for your machine.
- Other global emissions standards are also met by some Perkins products.

Notes:
- The engines shown as capable of U.S. EPA Tier 3 are also appropriate for similar emissions standards such as EU Stage IIIA.
- The engines shown as capable of U.S. EPA Tier 4 are also appropriate for similar emissions such as EU Stage IV (up to 56 kW) or EU Stage V (over 56 kW).
