## **DIESEL DISPLACEMENT**

A BETTER WAY TO VALUE YOUR FUEL SAVINGS

Cat® engines with Dynamic Gas Blending (DGB) save you money by reducing diesel fuel consumption. When we introduced our Tier 2 DGB solution, we talked about the savings in terms of "substitution," but that was confusing because the energy value of natural gas varies depending on the source. For our Tier 4 Final DGB engines, we're calculating the savings in terms of "displacement," based on the actual volume of fuel your engine uses. It's a better way to measure exactly how much less diesel you'll burn — as much as 85% less.
