**CUSTOMER SUCCESS**

**CAT® ADVAN SYS™ GET**

**About the customer… C&R Developments Ltd, New Zealand.**
C&R Developments is one of New Zealand’s leading civil and mining contracting companies. Established and continuing as a Cambridge family-owned business, they have 60 years’ experience and expertise in all earthworks and plant management fields.

**THE CHALLENGE**
C&R has commenced work on the Lyttleton Port Reclamation. The two-year project involves dredging five hectares of sea bed and replacing it with 3.5 million tons of selected material from Gollan’s Bay Quarry (1.5 km from the port). It includes a combination of blasting, evacuation, screening, stockpiling, and carting the tough volcanic rock.

**THE SOLUTION**
The C&R team chose to purchase a Cat® 390F that gave them the power, fuel efficiency, and reliability they needed for the job. The machine was fitted with Cat Advansys™ GET.

The customer chose the severe service 6.0 m³ rock bucket for this site and the Cat Advansys Penetration Plus tips were a perfect match.

**THE CUSTOMER RESULTS**
“The Cat Advansys has been a real ripper into the tough volcanic rock.

“It is simple, efficient, and more effective. I think one of the greatest aspects of the Advansys system is that we can put the machine back to work as quickly as possible.

“Over 1600 hours on the first set of tips and still going.”

Tim Ross, Director
