

Comparing Animals and Machines

Answer the following questions.

Name: _____

This attachment is called a grapple. It is used to sort materials, haul things, or demolish objects. They are also used in forestry where they can pick up and move logs. Think of an animal that moves logs. How does it move logs? Write your answer below.

This attachment is called a ripper because it rips into the dirt like a claw. Sometimes they are attached to the back of a tractor to break up dirt. What animals can you think of that have claws to dig and break up dirt? Why do they need to rip up dirt? Explain your answer below.

This machine is a telehandler. The telescopic boom can extend to reach high places. What animals are able to reach high places and how do they reach them? Write your answer below.
