

## FULL-SERVICE AGREEMENT

Solar Turbines realizes that you can face many challenges in maintaining your operational goals during the lifecycle of your turbomachinery investment. You are looking to strike a balance between maximizing the efficiency and availability of your turbomachinery, while minimizing the cost of on-going ownership requirements, such as periodic maintenance.

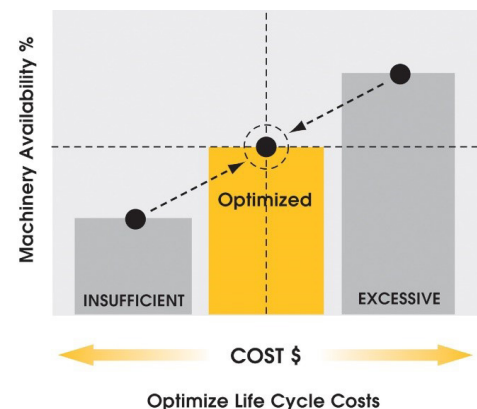

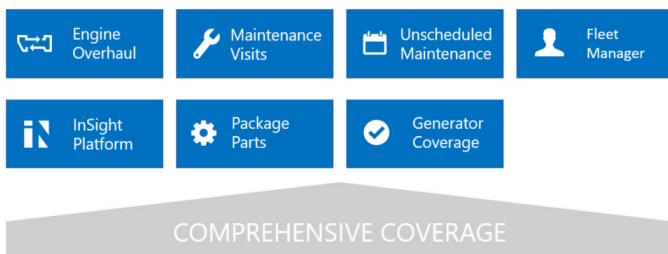

With a full-service agreement, Solar Turbines has engineered a long-term service solution that is designed to help our customers reach your goals by providing a fixed service cost over the long term and by significantly reducing your financial risk of equipment repairs. This comprehensive service offering includes several Solar Turbines service capabilities that, when combined, can successfully maintain the operational health of your machinery and mitigate unplanned machinery downtime while extending its lifecycle. Solar provides full overhaul coverage with an engine exchange program, scheduled maintenance inspections, unscheduled maintenance call-outs, package parts coverage and generator coverage.

These service capabilities, combined with Solar's equipment health management approach, make a comprehensive and value-based machinery management solution. Under this approach, a Fleet Manager will be assigned to you in addition to local service district support. Solar Turbines also uses our InSight Platform™ to enable efficient machinery management and enhanced equipment assessment capabilities. The Fleet Manager, along with your operations team and Solar's technical support network, are all armed with the InSight Platform tools in order to apply best practices and advanced technology to your operations.

### Key Benefits

- Comprehensive service coverage
- Risk sharing with OEM
- Long-term relationship with trusted service provider
- Direct access to Solar's technical experts

### Long-Term Service Agreement > Full Service Agreement
