

# A TRUCK FOR YOUR APPLICATION

THE 794 AC IS THE IDEAL CHOICE TO WORK IN YOUR APPLICATION AND ALONGSIDE THE FLEET YOU ALREADY OWN.

Optimized horsepower performance makes it possible for the 794 to run in all areas of the mine — from deep pits to downhill hauls; from smooth, flat roads to areas of high rolling resistance — with the same engine. While higher horsepower is available to boost productivity in deeper pits, an easy adjustment to a lower horsepower allows the 794 to better align with mixed fleets and keep fuel costs lower. This horsepower setting is configured by software and doesn't require an engine change. In addition, body choices allow you to select, design and customize options based on your application.
