

## COMMITMENT TO BRAZIL

Since the 1950s, Progress Rail has stood out in the freight and passenger market in Brazil as a leading service provider and manufacturer of components for the industry. Through acquisitions over the years, the company has significantly expanded its supply of EMD® locomotives to Brazil and South America.

We manufacture and repair components and manufacture new locomotives, including our EMD SD70ACe, at our Sete Lagoas, Minas Gerais facility. Our Curitiba location provides electronic systems to remotely monitor and service locomotives.

Progress Rail has contributed to the regional economic growth in these locations, with our facilities in Brazil assisting with the development of new component suppliers for the local rail market. Through providing jobs to people in the region, Progress Rail has boosted the economy and provided social benefits, such as employee training and education. Our facilities are assisting in improving the availability and reliability of locomotives and subsequently increasing the capacity of railroad transportation in Brazil.
