Key features

Projected Capacitive touch technology for a fast, sensitive experience

Projected capacitive touch technology delivers a superior, more intuitive experience. It reacts quickly with zero delay, so writing and drawing feel more natural.

Embedded MagicWB S2 software adds flexibility

Embedded Samsung software helps deliver a dynamic experience, whether in the boardroom or the classroom. Once sessions conclude, MagicWB S2's compatibility with standard office software programs lets users update, save, capture, print and share files for later viewing.

Complete control for intuitive presentations

Soft handwriting and palm erasing let you easily annotate and change content on the fly. Presentations focus on the data, not the process. Optional MagicWB I2 software (PC required) allows up to 10 participants to touch and draw on the screen at the same time, for ultimate engagement and interactivity.

Multiple content sources for dynamic presentations

User-friendly menus and file management tools make it easy to display and manage a wide variety of content in presentations. It's also simple to interact with audience devices, to display their content on the DM65E-BC, then discuss and edit as a group.

No PC required, for easy installation

The Samsung DM65E-BC does not require a dedicated PC, so installation is simple. It can also be relocated easily, and since it features built-in speakers, all it needs is a network connection and a standard power outlet to be ready to go.

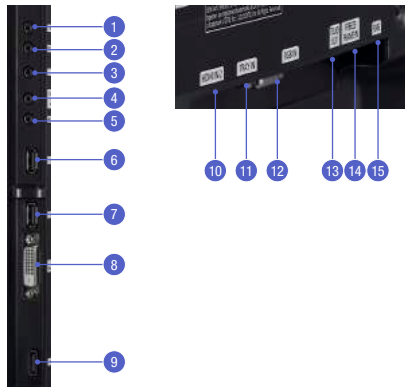

Samsung DME-BC series Interactive White Board

			DM65E-BC
