The new Samsung Portable SSD T3 sets the standard for speed, capacity, durability and connectivity. Store data safely and move it wherever it's needed.

- About the size of a business card
- Available in 250GB, 500GB, 1TB, 2TB
- Read/write speeds up to 450MB/sec
- Store or transfer music, photos and video
- AES 256-bit hardware encryption, for security without impacting performance

Key features

Potent portability

Always on the move from one job to the next, media and data need to travel at the speed of life. Samsung has created portable memory that keeps up. With faster data transfer speeds, built-in security, strength and light weight, the T3 is the new standard in external storage.

Quick on its feet

The days of waiting ages for file transfers are over. Reducing downtime with blazing-fast read/write speeds of up to 450 MB/s, the T3 is driven by Samsung TurboWrite technology, and reaches speeds up to 4x faster than traditional external hard drives (HDD).* And it's compatible with multiple devices. Connect the T3 to desktops, laptops, TVs, Android devices and more.

Small, strong and silent

It may be light, but don't be deceived. On the outside, a strong metal body handles the daily wear of professional life. On the inside, with no moving parts, an internal support frame and an extra shock-resistant engineered design, the T3 survives drops other storage solutions can't, and is whisper-quiet, besides.

The light heavyweight

Data won't weigh the T3 down. The T3 weighs just 1.8 ounces and is roughly the size of a business card. It floats like a butterfly, but it packs a punch. Advanced Samsung V-NAND technology enables it to hold up to 2TB of data and media.

Makes great connections

Nowadays wherever people travel, they prefer to take their data with them. The T3 comes with a USB 3.1 Type C connection port and a Type C to Type A cable for increased information transfer speeds and compatibility with more devices.

Tough to crack

When it comes to transferring sensitive files, being protected means users are free to do what they need. The T3 is outfitted with optional-use AES 256-bit hardware encryption. It does not affect performance, and with the convenient Samsung Portable SSD Android app, users can easily manage their password settings on the move.
