*Electric drive option available (1800 kW) on 6060 AC/6060 AC FS

**Bucket**

| Bucket Capacity – Front Shovel (heaped 2:1) | 34.0 m³ 44.5 yd³ |
| Bucket Capacity – Backhoe (heaped 1:1)      | 34.0 m³ 44.5 yd³ |

**Operating Specifications**

| Bucket Payload               | 61 tonnes 67 tons |
| Operating Weight – Front Shovel | 569 tonnes 627 tons |
| Operating Weight – Backhoe    | 570 tonnes 628 tons |
The most popular Cat hydraulic mining shovel, the 6060/6060 FS offers a 34 m³ (44.5 yd³) bucket that is tailor-made to 4-pass load 218-227 tonne (240-250 ton) trucks, like the Cat 793D, 793F and MT4400D AC. Facilitating higher working speeds via its powerful engine output and sophisticated hydraulic system, the 6060/6060 FS allows fast cycle times and high productivity. The electric drive option – 6060 AC/6060 AC FS – offers even lower total cost of ownership.
We understand the challenges you face, the importance of reliability, and the relationship between uptime and productivity. That’s why we continually strive to produce the safest, most reliable and productive hydraulic mining shovels possible. Offering the widest payload range of any manufacturer in the industry, the ability to optimally pair with our popular line of mining trucks, and the support of our world-class Cat dealer network, we are uniquely positioned to partner with you to help achieve your productivity targets. We understand what matters to you. Our hydraulic mining shovels are built with you in mind. Because in mining, every day matters and every load counts.
Drive Systems
Balanced Combination of Power and Efficiency

Meeting Your Site Specific Needs with a Choice of Robust Drive System Options

Giving you the option to choose the drive system best suited for your operation, the Cat 6060/6060 FS can be equipped with either two diesel engines for greater mobility, or an electric drive for better efficiency.

• Durable and Proven Cat 3512C Engines
  Offering unsurpassed performance and durability, Cat 3512C engines have been proven to withstand the challenging conditions found at mine sites across the globe. Delivering high power output, proven reliability, and excellent fuel efficiency, 3512C engines keep your primary loading tool producing, while maintaining a low cost of operation, to keep you profitable.

• Efficient Electric Drive System on 6060 AC/6060 AC FS
  Providing a lower cost-per-ton alternative to diesel powered hydraulic mining shovels, our electric drive option maintains the ruggedness you need and offers superior availability since no refueling and less service is required.

The 6060 AC/6060 AC FS is the ideal solution for operations that do not require a great deal of mobility and value a low cost-per-ton model.
Keep Producing and Ensure the Safety of Your Operators, Even During Single Engine Loss

You will realize enhanced safety, greater uptime, more productivity, and better serviceability as a result of our twin engine concept.

- **Enhanced Safety**
  The ability to move your shovel to a safe area for repair, away from high walls, blast zones, or other safety hazards, is still possible with the use of a single engine.

- **Greater Uptime and More Productivity**
  65% of full production can still be achieved with the use of a single engine. This is due to the shovel’s continued ability to exert maximum digging forces, to lower the front attachment without requiring engine power (i.e., pressure-free), and to recuperate energy via its closed-loop swing circuit.

- **Better Serviceability**
  Troubleshooting is greatly simplified and expedited with the ability to compare one engine versus the other.
TriPower System
Superior Digging Capability and Bucket Fill Factors
Dig More Effectively with Our Unique TriPower Front Shovel Design

You will experience safer, easier and faster front shovel operation with TriPower, a system proven on over a thousand Cat hydraulic mining shovels worldwide. Generating superior mechanical leverage and control, our FS configured hydraulic mining shovels utilize a unique boom design that employs rotatable triangular rockers. This design facilitates quicker cycle times, increased effective lifting force, constant boom momentum, automatic constant bucket angle, and automatic roll-back limiter.

• **Quicker Cycle Times**
  – Faster lifting speeds are achieved, because the design enables the use of smaller-diameter boom cylinders.

• **Increased Effective Lifting Force**
  – Design transfers digging forces into the superstructure, creating supporting boom momentum in addition to momentum that is generated hydraulically.

• **Constant Boom Momentum**
  – Allows smaller boom cylinders for higher lifting speed.
  – Keeps lifting speed constant.
  – Enables the shovel to lift a single load along the entire digging distance.
  – No retracting of stick cylinders is required, ensuring that all hydraulic pumps are supplying the boom-up function.

• **Automatic Constant Bucket Angle**
  – Material spillage is avoided during boom lifting, because the filled bucket automatically maintains a constant bucket angle.
  – On conventional kinematics the operator has to control manually the bucket position during lifting which cut in half the available oil flow for the boom cylinders.

• **Automatic Roll-back Limiter**
  – Preventing material spillage back on to the operator’s cab and machine superstructure, our system ensures that the bucket is always in a safe position, without operator control/manipulation, when it is at maximum height.
  – The boom cylinder continues to receive maximum oil flow, because the operator does not need to activate the bucket cylinder.
Hydraulic System
Easy Serviceability and Greater Productivity

Straightforward, Safe System Maintenance
Ensuring neat organization for safe operation, easy inspection, and fast service, and reducing the number of hoses needed, the main valve block is located on top of the boom.

Faster Cycle Times
Faster cycle times are realized, because float valves are used to lower the boom instead of engaging pumps. This facilitates faster boom movements and allows other operating functions to occur simultaneously, such as bucket curl and stick in/out.

Greater Control
Your operators will experience greater control with our five circuit hydraulics, allowing for two cylinder motions, two travel motions, and swing to be controlled simultaneously.
Independent Oil Cooling System
More Effective Oil Cooling for Extended Component Life

Protect and Extend the Life of Your Hydraulic Components and Seals
Providing a more efficient means of cooling, particularly in demanding applications, our unique independent oil cooling system will extend the life of your hydraulic mining shovel’s components.

More Efficient Oil Cooling
Our system is independent of return oil, achieving efficiency through the utilization of dedicated pumps that provide cooling capacity as needed, whether the engine is idling or under load. That means optimum oil temperature is being maintained, even while your operator waits for the next truck to load. Competitive hydraulic mining shovels only provide cooling when the machine is working and the engine is under load.

Additional efficiency is achieved via our thermostatically controlled radiator fan speed. The fans do not run until oil temperature exceeds a temperature of 50° C (122° F), saving energy.

Optimal Oil Temperature Maintained
The highly efficient oil cooling system ensures that the oil temperature is only 25° C to 30° C (45° F to 54° F) higher than the ambient temperature. Thus the hydraulic oil working temperature remains within the optimal operating viscosity range of 50° C to 70° C (122° F to 158° F).
Experience Improved Machine Control and Component Life, while Reducing Fuel Consumption and Noise Emission, with Our Intelligent Pump Managing System

Delivering optimal performance, our pump managing system continuously evaluates actual engine and hydraulic operating values against set values, and adjusts pump output accordingly. This results in efficient use of the engine for greater productivity.

Pump managing system advantages include:

• Best possible utilization of engine output and engine overload avoidance via electronic load limit regulation
• Less energy consumption and less thermal load on hydraulic oil with zero oil flow regulation for main pumps
• Less fuel consumption and lower noise emission via automatic RPM reduction
• Reduced component wear and lower noise emission with automatic oil flow reduction for closing/opening of bucket clam
• Protection of components with automatic oil flow reduction if hydraulic and/or engine coolant temperature exceed set maximum
• Improved operator control response via on-demand pump flow
Load More Material, at Lower Cost, with the Energy Recovery Capability of our Closed-loop Swing System
Delivering faster cycle times and improved energy efficiency, while also generating less heat, our closed-loop swing circuit provides distinct advantages over competitive machines utilizing open-circuit swing systems.

Greater Efficiency Via Energy Recovery
Kinetic energy captured during the swing motion is fed back into the system during deceleration, providing more power to drive the main and auxiliary pumps. Energy is saved during deceleration, because braking occurs via counteracting controls, as opposed to throttles used in open circuit swing systems.

Energy Savings During Acceleration
Energy is saved during acceleration via torque control, providing a pressure balance valve that controls the swing pump against pressure in the closed-loop swing circuit, ensuring that only the minimum necessary oil flow is utilized at any given time.

Faster Cycle Times
Faster boom lift motion during swing is achieved with our closed-loop swing system, increasing overall productivity.
Get Peak Operator Performance with Our Safe and Comfortable Operator’s Cab

We understand that the most important factor in your hydraulic shovel’s effectiveness is the performance of its operator. To help make their workday as productive as possible, we’ve incorporated safety and comfort features into the 6060/6060 FS operator’s cab.

Protection for Your Operator; Every Day, Every Shift

• Safety glass is used for all cab windows, and armored glass for the windshield.
• Operator’s seat is equipped with integrated safety switch that automatically neutralizes the hydraulic controls when the operator leaves the seat.
• Position of cab module, approximately 7.6 m (24 ft 11 in) high, provides excellent visibility of the digging and loading areas.
• Cab meets Falling Object Protection System (FOPS) and DIN ISO 3449 standards.

Supporting Peak Operator Performance with Comfort Features

• Pneumatically cushioned, multi-adjustable operator’s seat.
• Large, transflective color touch-screen display (BCS III) provides vital machine monitoring and diagnostic data for convenient troubleshooting and service assistance.
• Enhanced control response and servo adjustment capability via electro-hydraulic servo control.
Enhanced Control Response and Optimized Hydraulic Engine Load Management
Help your team meet productivity and performance standards with our intuitive, informative on-board electronics.

Electro-Hydraulic Servo Control
- **Enhanced Control Response**
  The system relays actuating signals from the joysticks, delivering fast and precise machine reactions that reduce operator fatigue.
- **Increased Uptime**
  Uptime is increased as a result of simplified troubleshooting and advanced diagnostic capabilities.
- **Greater Operator Comfort**
  Easier setting of servo control characteristics allow operators to adjust to their preference.
- **Clean and Quiet Cab Environment**
  No hydraulic lines are present in the cab or the cab module, ensuring a clean arrangement with less noise emission.

Control and Monitoring Platform (CAMP)
- **Reduced Control System Inventory**
  Streamlined system requires only one type of controller for each function (i.e., left side drive train, right side drive train, servo, and auxiliary) reducing the number of required controllers in the system and associated replacement stock.
- **Less Fuel Consumption**
  Engine works in optimal range of performance during the entire digging cycle, reducing fuel burn.
- **Increased Component Life**
  Reduced hydraulic pulsation lessens stress imposed on the engine and hydraulic components.
- **Enhanced Operator Comfort**
  Less vibration and more even machine movement via reduced pressure peaks.
- **On-screen Documentation**
  The Parts book, Technical handbook, and Operating handbook, as well as hydraulic and electric schematics, are available in electronic format.
Helping You Enhance Safety and Productivity through Technology
Aimed at enhancing the productivity and profitability of your hydraulic mining shovel, we currently offer a combination of Cat MineStar System offerings and Cat hydraulic mining shovel technology solutions.
**Cat MineStar System**

Helping you achieve your goals for enhanced mine site safety, improved efficiency, reduced operating costs, and greater profitability, the Cat MineStar System provides the most comprehensive suite of mining technology products in the industry. It consists of a number of configurable capability sets – Fleet, Terrain, Detect, Health, and Command – that allow you to scale the system to your mine site needs. Cat MineStar System helps you manage everything from material tracking to sophisticated real-time fleet management, machine health systems, autonomous equipment, and more.

The Cat 6060/6060 FS is currently able to utilize three of the Cat MineStar System capability sets:

- **Fleet**
  
  Fleet provides real-time machine tracking, assignment and productivity management, providing a comprehensive overview of all your asset operations from anywhere in the world.

- **Terrain**
  
  Terrain enables high-precision management of drilling, dragline, grading and loading operations through the use of guidance technology. It increases machine productivity and provides you real-time feedback for improved efficiency.

- **Detect**
  
  Detect provides equipment operators with enhanced awareness for increased site safety, using a combination of radars, an in-cab display, and multiple cameras.

The remaining Cat MineStar System capability sets are currently under development for the Cat hydraulic mining shovel product line.

**Hydraulic Mining Shovel Technology Solutions**

- **Monitoring and Diagnostic System**
  
  Enhancing diagnostic capabilities and providing detailed troubleshooting functions, our Board Control System uses sensors throughout the machine to monitor operating data, record faults, and notify the operator audibly and visually. This promotes the earliest possible detection of faults and allows for timely maintenance planning and assistance for speedy repair.
Achieve Targeted Loading/Hauling Production with Perfectly Paired Cat Hydraulic Mining Shovels and Mining Trucks

For full truck payloads with minimum loading time, an efficient loading/hauling system begins with an optimized equipment match. Cat hydraulic mining shovels are matched with Cat mining trucks to maximize volume of material moved at the lowest operating cost per ton.

### 6060/6060 FS Pass Match with Cat Mining Trucks

Rugged Front Attachment Options Designed and Fabricated to Withstand Your Extreme Mining Conditions

To extend service life and ensure that your shovel keeps producing, our front shovel attachment structures are designed for durability and dependability. Extended performance in the harsh mining conditions you face daily is accomplished through selection of high-strength steels and rugged castings, joined and thermally stress-relieved, to help you achieve your productivity targets.

Front Attachment Structures Include:
• Heavy castings at all pivot points
• Better flow of forces and less welding seams, as top chords are made of one bend plate
• Entire boom and stick are stress-relieved after welding
• Welding procedures allow for internal welding (double prep weld)
Swing System
Longer Component Life for Better Swing System Reliability

More Reliable Swing Component Life
Extending component life and ultimately improving machine uptime, our swing system includes a triple-race swing roller bearing with internal gearing connected to an automatic lubrication system.

For added reliability, all lube lines are located inside the roller bearing for maximum protection.

Service Friendly
Easier maintenance is afforded by the free accessibility of swing gears and rotary distributor.
Less Wear and Tear on Crawler Components

Extending track life and improving overall machine reliability, our undercarriages are engineered with extensive use of finite element analysis, steel structures are optimized, travel motors are well-protected by strong cover plates and hinged door covers, and a unique robust track chain incorporates a combined pad/link design. Further extending track life, a state-of-the-art track tensioning system with membrane accumulator automatically adapts the tensioning of the tracks, depending upon operating conditions.
Safety
Designed with Your Safety as Our Top Priority

Sharing your commitment to safety, and driven by our commitment to Zero Harm, we work tirelessly to design the safest machines possible to protect your most important asset; your employees. That is why we updated the design of the 6060/6060 FS in accordance with the principles of MDG 41 and 15, and offer this standard, not as an option or upgrade.

Some examples of the safety-enhancing features of the Cat 6060/6060 FS hydraulic mining shovel include the following:

Machine Access
- All stairways have 45° angle for safe and comfortable access and movement about the machine.
- Slide down emergency egress ladder directly adjacent to the operator’s cab.
- Hydraulically operated boarding ladder with emergency lowering via nitrogen accumulator ensures that ladder remains operational even when engines shut off.
- Machine swing and propel capability is switched-off when ladder is in down position.

Service and Maintenance
- Improved routing and clamping of hydraulic hoses.
- Hydraulic hoses and electrical wiring are separated from each other for fire prevention.
- All service areas are accessible via anti-slip walkways, and trip hazards are eliminated.
- All hot surfaces are covered to prevent burns.

Electrical System
- Cabinet with battery isolation switch, mounted on top deck directly above the battery box, allows quick and easy shut-off of voltage on the entire shovel.
- Cabinet contains a starter isolator which allows on-board voltage, but prevents starting of engines.

Emergency Shut-offs
- An easily accessible, standard shut-off switch located in the cab shuts down the electrical system in case of emergencies.
- Additional shut-off switches are located on the machine, in the machine house or accessible from the ground with pull ropes.

Precise Bucket Control
- Minimizing the potential for material spill on to the attachment or cab, the TriPower automatic roll-back limiter prevents the bucket from being curled back too far.
Lowering your operating costs and maximizing your hydraulic mining shovel’s uptime and productivity is of supreme importance to us. To that end, we’ve made vital components more accessible and designed simpler systems to make maintenance activities quicker and easier.

Open, Spacious Access to Components
- Facilitating easier maintenance, exceptional accessibility is provided to systems like the swing motor, swing gearbox and rotary distributor in the well organized superstructure. The engine is accessible from three sides.
- Easily accessed by walkways on both sides, the boom-mounted main valve block, a feature unique to Cat hydraulic mining shovels, provides a clean layout and reduces the number of hoses leading from the superstructure to the attachment.

Simple Hydraulic System with Main Valve Block Positioned on Boom
- Ensuring neat organization for safe operation, easy inspection and fast service, the design of our hydraulic system significantly reduces the total number of frequently moving hoses from the superstructure to the attachment.
- Longer hose life via improved routing in accordance with MDG design standards.

Easy Ground-level Fuel and Fluid Replenishment
- Quick fuel and fluid replenishment is made easy with a retractable service station underneath the engine module, accessible at ground-level.

Improved Drive Train Troubleshooting
- Twin-engine design facilitates troubleshooting of drive trains, as one engine can be compared to the other.
Customer Support
Stay Up and Running with Service and Support from Our Unmatched Global Network

Commitment Makes the Difference
Cat dealers offer a wide range of solutions, services and products that help you lower costs, enhance productivity and manage your operation more efficiently. From the time you select a piece of Cat equipment until the day you trade or sell it, the support you get from your Cat dealer makes the difference.

Dealer Capability
Cat dealers provide the level of support you need, on a global scale. Dealer expert technicians have the knowledge, experience, training and tooling necessary to handle your repair and maintenance needs, when and where you need them.

Product Support
When Cat products reach the field, they are supported by a worldwide network of parts distribution facilities, dealer service centers and technical training facilities to keep your equipment up and running.

Cat customers rely on prompt, dependable parts availability through our global dealer network, ready to meet your needs 24/7.

Service Support
Every piece of Cat equipment is designed and built to provide maximum productivity and operating economy throughout its working life. Cat dealers offer a wide range of service plans that will maximize uptime and return on your investment, including:
- Preventive Maintenance Programs
- Diagnostic Programs, such as Scheduled Oil Sampling and Technical Analysis
- Rebuild and Reman Option
- Customer Support Agreements

Application Awareness
Operating and maintenance costs are influenced by many application and site-specific factors, such as: material density and fragmentation, payload, bench height, truck positioning, ground conditions, amount of traveling and maintenance. Your Cat dealer can provide you with an understanding of the effects application characteristics and operating techniques have on maintenance and operating costs.

Operation
Your Cat dealer can arrange training programs to help operators improve productivity, decrease downtime, reduce operating costs and enhance safety.
Meeting the needs of today without compromising the needs of tomorrow is the goal for all Cat machinery. The commitment to helping you operate safely and sustainably is affirmed in the production of the 6060/6060 FS hydraulic mining shovel.

**Cat Hydraulic Mining Shovel Sustainability:**

- **Electric Power Option**
  Produces less emissions, heat, and sound, and avoids disposal/replenishment of engine oil and oil filters.

- **Energy Recovery**
  Emit less heat and improve energy efficiency via the energy recovery capability of the closed-loop swing circuit.

- **Rebuilds**
  Decrease your energy use and material consumption with a machine that's designed to be rebuilt.

Maximum oil flow

| Diesel version | 4 × 1300 L/min | 4 × 343 gal/min |
| AC version | 4 × 933 L/min | 4 × 246 gal/min |

Maximum pressure, attachment

| Diesel version | 320 bar | 4,640 psi |
| AC version | 370 bar | 5,365 psi |

Swing pumps

| Diesel version | 4 × reversible swash plate pumps |  |
| AC version | 3 × reversible swash plate pumps |  |

Maximum oil flow

| Diesel version | 4 × 352 L/min | 4 × 93 gal/min |
| AC version | 3 × 491 L/min | 3 × 131 gal/min |

Maximum pressure, swing pumps

| Diesel version | 370 bar | 5,365 psi |
| AC version |  |

Total volume of hydraulic oil

| Diesel version – approximately | 9400 L | 1,930 gal |
| AC version – approximately | 7300 L | 2,483 gal |

Hydraulic tank capacity

| Diesel version – approximately | 7100 L | 1,876 gal |
| AC version – approximately | 5100 L | 1,320 gal |

Pump Managing System contains:
- Electronic load limit control
- Flow on demand from main pumps depending on joystick position
- Automatic regulation of main pumps to zero flow without demand
- Automatic rpm reduction of engine speed during working breaks
- Reduced oil flow of main pumps at high hydraulic oil temperature or engine temperature

Pressure cut-off for main pumps

Cooling of pump transmission gear oil

Filters:
- Full-flow high-pressure filters (100 μm) for the main pumps, installed directly behind each pump
- High pressure filters (200 μm) for the closed swing circuit
- Full-flow filters (10 μm) for the complete return circuit
- Pressure filters (40 μm and 6 μm) for servo circuit
- Pressure filters (40 μm) for the feed pumps of the closed swing circuit
- Transmission oil filters (40 μm)

Hydraulic Oil Cooling

| Oil flow of cooling pumps | 4 × 488 L/min | 4 × 129 gal/min |

Diameter of fans

| 4 × 1170 mm | 4 × 46 in |

Cooling system is fully independent of all main circuits, i.e. controlled cooling capacity is available whenever engine is running

Gear-type cooling pumps supplying high-volume, low-pressure oil to fans and aluminum coolers

Fan speed and flow of oil to the coolers are thermostatically controlled

Extremely high cooling efficiency to ensure optimum oil temperature

Swing System

Swing drives

4 compact planetary transmissions with axial piston motors

Parking brakes

Wet multiple disc brake, spring loaded/hydraulically released

Maximum swing speed

3.8 rpm

Swing ring

Triple-race roller bearing with sealed internal gearing

Closed-loop swing circuit with torque control

Hydraulic braking of the swing motion by counteracting control

All raceways and the internal gearing of swing ring, supplied by automatic central lubrication system

Dirt wipers at swing ring to prevent build-up of debris between swing ring and carbody

Retractable Service Station

Retractable service station installed underneath the engine module and easily accessible from ground.

Equipped with:
- Quick couplings for:
  - Diesel fuel
  - Engine coolant – left/right
  - Pump transmission gear oil – left/right
  - Engine oil – left/right
  - Hydraulic oil tank
  - Grease container
- Cat jump-start socket
- Indicator lights for fuel tanks left/right full and grease container full
**Operator’s Cab**

- Operator’s eye level – approximately 7.6 m (24 ft 11 in)
- Internal dimensions cab:
  - Length: 2200 mm (7 ft 3 in)
  - Width: 1600 mm (5 ft 3 in)
  - Height: 2150 mm (7 ft 1 in)
- Under roof mounted heating ventilating and air conditioning system
- Pneumatically cushioned and multi-adjustable comfort seat with lumbar support, safety belt, head and armrests
- Switch in seat cushion to automatically neutralize the hydraulic controls when operator leaves the seat
- Joystick controls integrated in independently adjustable seat consoles
- Fold-away auxiliary seat with safety belt
- FOPS (rock guard; approved according to DIN ISO 3449) integrated into cab structure
- All-round safety glass, armored windshield and sliding side window
- Windshield with parallel intermittent wiper/washer
- Roller blinds at all windows
- External sun shields at side and rear windows
- Robust instrument panel including large colored BCS screen with transflective technology
- Board Control System (BCS) electronic monitoring and data logging system for vital signs and service data of engines, hydraulic system and lubrication system
- Machine access via retractable access stairway, stairway angle approximately 45°, hydraulically operated
- Sliding emergency ladder (kick-down type) with ladder cage

**Automatic Lubrication System**

- Capacity of grease container: 1000 L (264 gal)
- Dual-circuit system with hydraulically driven heavy-duty pumps and electronic time relay control to adjust the pause/lube times
- Connected to the main lubrication system are:
  - Raceways of the swing roller bearing
  - Two greasing pinions for the internal gearing of the swing ring
  - Pivot points of attachment, bucket and cylinders
  - Bottom rollers of undercarriage
- System failures displayed by Board Control System
- Grease filters (200 μm) between service station and container as well as directly behind grease pump

**Attachments**

- Booms and sticks are torsion-resistant, welded box design of high-tensile steel with massive steel castings at pivot areas
- Welding procedures allow for internal counter-welding (double prep weld) wherever possible
- Booms and sticks are stress-relieved after welding
- Catwalks with rails at booms
- Inspection holes in booms (FS and BH) and stick (FS)
- Guards for shovel cylinders (FS)
- Pressure-free lowering of boom (FS and BH) and stick (FS) by means of a float valve
- Shovel attachment with unique TriPower kinematics ensuring the following main features:
  - Horizontal automatic constant-angle bucket guidance
  - Vertical automatic constant-angle bucket guidance
  - Automatic roll-back limiter to prevent material spillage
  - Kinematic assistance to hydraulic forces
  - Constant boom momentum throughout the entire lift arc
  - Crowd force assistance
- All buckets (FS and BH) are equipped with a wear package consisting of:
  - Special liner material covering main wear areas inside and outside of bucket
  - Lip shrouds between teeth
  - Wing shrouds on side walls
  - Heel shrouds at bottom edges
- Special wear packages for highly abrasive materials on request

**Undercarriage**

- 1st stage – Maximum: 1.4 km/h (0.87 mph)
- 2nd stage – Maximum: 2.0 km/h (1.24 mph)
- Maximum tractive force: 2956 kN (664,300 lbf)
- Gradeability of travel drives – Maximum: 52%
- Track pads (each side): 42
- Bottom rollers (each side): 7
- Support rollers (each side): 2 plus a skid plate in between
- Travel drives (each side): 1 planetary transmission with 2 two-stage axial piston motors
- Parking brakes: Wet multiple-disc brake, spring applied/ hydraulically released
- Cast double-grouser combined pad links with bushings connected by hardened full floating pins
- All running surfaces of sprockets, idlers, rollers and pad links, as well as teeth contact areas of sprocket and pad links, are hardened
- Bottom rollers are connected to the automatic lubrication system
- Fully hydraulic, self-adjusting track tensioning system with membrane accumulator
- Automatic hydraulic retarder valve to prevent over-speed on downhill travel
- Acoustic travel alarm

Optional Equipment may vary. Consult your Cat dealer for details.

**GENERAL**
- Custom paint

**SUPERSTRUCTURE**
- Hydraulic service crane on superstructure with auxiliary engine
- Oil change interval extension for engine oil up to 500 hours
- Two round containers for two standard 200 L (53 gal) barrels (instead of 1000 L (264 gal) grease container)
- Filling of round containers via service station
- Various cold-weather options

*Additional optional equipment available on request.*

**CAB**
- Dual (redundancy) heating ventilating and air conditioning system
- Cab heating
- Camera monitoring system

**UNDERCARRIAGE**
- Track pad width 1600 mm (5 ft 3 in) or 1800 mm (5 ft 11 in)
- Cover plate under carbody (belly plate)
