AD60 Features

One Supplier
Caterpillar designed and manufactured major power and drive train components for reliability and performance.

High Performance Engine
The Cat C27 engine with ACERT Technology offer the perfect balance between power, robust design and economy.

Power Shift Transmission
Reliable and rugged design to deliver power and efficiency for peak power train performance.

Engine/Power Train Integration
Intelligent and robust electronics integrate all power and drive train components for overall optimum performance.

Robust Braking
Cat oil-cooled multiple disc brakes offer exceptional, fade resistant braking in all haul road conditions.

Comfortable Cab
Ergonomically designed for all-day comfort, control and productivity.

Truck Body
A variety of Caterpillar designed and built bodies and liners ensure optimal performance and reliability in tough mining applications.

Enhanced Serviceability
Designed with improved service points and grouped service locations to simplify maintenance and repair.

The AD60 Underground Articulated Truck is designed for high production, low cost-per-ton hauling in underground mining applications. Rugged construction and simplified maintenance guarantee long life with low operating costs.

Engineered for performance, designed for comfort, built to last.
Power Train – Engine
The Cat C27 engine is built for power, reliability and efficiency.

ACERT Technology
The Cat C27 achieves emissions equivalent to U.S. EPA Tier 2 and EU Stage II standards. It delivers higher power and greater durability for maximum hauling performance in the most demanding mining applications. Complete system integration of the engine and transmission optimizes performance and efficiency.

Power Increase
The 21.8% power increase over previous models provides unequalled lugging force during acceleration and less down-shifting on grade. Improved software and updates in engine technology further improve transmission shifting and decrease fuel consumption.

Watercooled Turbocharged and ATAAC
Air-to-air aftercooling provides improved fuel economy by packing cooler, denser air into cylinders for more complete combustion of fuel and lower emissions.

Electronic Unit Injection (EUI)
The electronically controlled unit injection fuel system senses operating conditions and regulates fuel delivery for optimum fuel efficiency. The proven high-pressure fuel system provides improved response times and more efficient fuel burn with lower emissions and less smoke.

Electronic Control Module (ECM)
ECM utilizes advanced engine management software to monitor, control and protect the engine utilizing self-diagnosing electronic sensors. The computerized system senses operating conditions and power requirements and adjusts engine for peak performance and most efficient operation at all times.

Design
Caterpillar designed one-piece cast iron block provides maximum strength and durability. Two-piece articulated pistons with forged steel crowns are designed to withstand higher cylinder pressure.
Power Train – Transmission
More power to the ground for greater productivity.

Mechanical Power Train
The Cat mechanical drive power train and power shift transmission provide unmatched operating efficiency and control on steep grades, in poor underfoot conditions, and on haul roads and drives with high rolling resistance.

Transmission
The Cat seven-speed planetary power shift transmission is matched with the direct-injection C27 engine with ACERT Technology to deliver constant power over a wide range of operating speeds. Individual clutch modulation provides smooth clutch engagements to optimize performance and extend clutch life.

Lock-Up Torque Converter
Combines maximum rimpull and cushioned shifting of torque converter drive with the efficiency and performance of direct drive. When engaged, lock-up provides superior power train efficiency by delivering more power to the wheels.

Lock-Up Clutch
Quickly releases and re-engages to reduce power train torque loads for smoother shifting, long life and a more comfortable ride.

Remote Transmission Oil Cooler
Increases cooling capacity in the transmission oil circuit to ensure optimal performance on long, uphill loaded hauls.
Engine/Power Train Integration
Intelligent electronics for overall optimal performance.

Cat Data Link
Electronically integrates machine computer systems to optimize overall power train performance, increase reliability and component life, and reduce operating costs.

- **Controlled Throttle Shifting** – Regulates engine RPM, torque converter lock-up and transmission clutch engagement for smoother shifts and longer component life.
- **Economy Shift Mode** – Decreases fuel consumption, lowers noise levels and potentially longer engine life.
- **Directional Shift Management** – Regulates engine speed to prevent damage caused by high speed directional changes.
- **Body-up Shift Inhibitor** – Prevents the transmission from shifting above a pre-programmed gear without the body fully lowered.

Electronic Technician (Cat ET)
Cat ET service tool provides service technicians with easy access to stored diagnostic data through Cat Data Link to simplify problem diagnosis and increase availability.

Overspeed Protection
The Automatic Retarder Control (ARC) system provides engine overspeed protection. The ARC will engage the brakes if the following conditions exist at the same time:

- An unsafe engine speed is reached.
- The ARC on/off switch is in the ON position or the OFF position.
- The throttle is being depressed by the operator.

If the transmission is in top gear, the lockup clutch is deactivated in order to protect the engine against an engine overspeed condition.
Integrated Braking System
The Cat oil-cooled braking system delivers reliable performance and control in the most extreme underground mining conditions. The integrated system combines the service, secondary, parking brake and retarding functions in the same robust system for optimum braking efficiency.

Oil-Cooled Multiple Disc Brakes
Four-wheel, forced oil-cooled, multiple disc service brakes are continuously cooled by a water-to-oil heat exchangers for non-fade braking and retarding performance. They are also completely enclosed to prevent contamination and reduce maintenance.

Automatic Retarder Control (ARC)
Electronically controls retarding on grade to maintain optimum engine RPM and oil cooling. Additional braking may be applied using the manual retarder or the brake pedal. ARC also allows the operator to maintain optimum engine speeds for faster downhill hauls and greater productivity. The ARC automatically activates when engine speed exceeds factory preset levels.

Superior Control
Automatic brake modulation offers a smoother ride and greater control, allowing the operator to concentrate on driving.
The AD60 operator station is ergonomically designed for total machine control in a comfortable, productive and safe environment. All controls, levers, switches and gauges are positioned to maximize productivity and minimize operator fatigue.

**Protective Structure**
Integral to the cab and frame, both the Rollover Protective Structure (ROPS) and Falling Objects Protective Structure (FOPS) are resiliently mounted to the mainframe to isolate the operator from vibration for a more comfortable ride.

**Standard Enclosed Cab**
Standard sound-suppressed ROPS cab provides a quiet, secure and comfortable air-conditioned working environment with fresh, pressurized, temperature-controlled air circulation.

**Cat Comfort Air Suspension Seat**
Ergonomic, fully adjustable suspension seat provides optimal operator comfort. Designed to minimize vertical and lateral motion of the operator. Thick cushions reduce pressure on lower back and thighs. Wide, retractable seat belts provide a secure, comfortable restraint.

**Steering Column**
Comfort wheel with tilt steering provides a comfortable driving position, secure grip and greater control.

**Monitoring System**
Cat Electronic Monitoring System (Cat EMS) continuously provides critical machine data to keep the machine performing at top production levels. Displays are backlit for easy viewing.
Truck Body Systems
Rugged performance and reliability in tough underground mining applications.

**Body Design**
Cat truck bodies are designed for optimal strength, capacity, durability and low cost per ton.

**Cat Truck Bodies**
Caterpillar has two body styles to meet your application:
- Dump Body
- Ejector Body
The ejector body offers clean load ejection and can be removed and switched with a dump body for greater machine versatility.

**Body Selection**
Selection of the right body depends on material, haul road, and dump conditions. The better the match of body to application, the greater the efficiency. Its diverging flow design gives clean load ejection, which maximizes production and avoids material carryback.

**Body/Chassis Integration**
Cat truck bodies are designed and matched with the integrated chassis system for optimum structural reliability, durability and long life.

**Fast Hoist Cycle Times**
Single-stage hoist cylinders provide fast dump cycle times of 12 seconds for raise and 24 seconds for lower.

**Truck Payload Management System (TPMS)**
The standard TPMS system calculates the payload the truck is carrying and determines truck cycle times.
Structures
Rugged Cat structures – the backbone of the AD60’s durability.

Frame Design
The frame uses box-section design with stiff frame beams to resist twisting forces giving it a longer structural life.

Articulating/Oscillating Hitch
This system provides steering and oscillation and enables the truck to maintain all wheel ground contact in rough terrain.

Serviceability
More time for production.

Ground-Level Service Access
Easy access to daily service points allows convenient servicing to tanks, filters, lubrication points, compartment drains and sight gauges for quick fluid level checks. Electric fuel priming capability and remote mounted fuel filters to save time during maintenance operations.

Diagnostics – Cat Electronic Technician
Electronic control system enables quick diagnosis of engine conditions and effective maintenance and repairs utilizing the Cat ET Service Tool.

Scheduled Oil Sampling
S·O·S℠ helps avoid minor repairs becoming major ones. Sample point adaptors fitted standard to machine.

Sight Gauges
Makes fluid level checks quick and easy. These include the hydraulic, transmission and coolant reservoirs.
Customer Support
Cat dealer services keep underground mining equipment productive.

Dealer Capability
Cat dealers will provide the level of support you need, on a global scale. Dealer expert technicians have the knowledge, experience, training and tooling to handle your repair and maintenance needs. They offer 24/7 product support via a worldwide network of reliable and prompt parts distribution facilities, dealer service centers, and technical training facilities to keep your equipment up and running.

Service Support
Cat equipment is designed and built to provide maximum productivity and operating economy throughout its working life. Cat dealers offer a wide range of service plans that will maximize return on your investment, including:

- Preventive Maintenance Programs
- Diagnostic Programs, such as Scheduled Oil Sampling and Technical Analysis
- Rebuild and Reman Options
- Customer Support Agreements

Technology Products
Cat dealers offer a range of advanced technology products designed to improve efficiency, productivity and lower costs. The standard VIMS™ Gen 3 system enables your equipment to provide detailed data about its own health and working conditions by monitoring key temperatures, pressures, and more.

Operator Training
Your Cat dealer can arrange operator training to improve productivity, decrease downtime, reduce operating costs and enhance safety.
Safety
Designed with safety as the first priority.

Product Safety
Caterpillar has been and continues to be proactive in developing mining machines that meet or exceed safety standards. Safety is an integral part of all machine and systems designs.

Engine Shutoff Switch
A secondary engine shutoff switch is located at ground level.

Integral ROPS Cab
Integral to the cab and frame, the ROPS is resiliently mounted to the frame to isolate the operator from vibration for a more comfortable ride.

Brake Systems
Four corner oil-cooled braking system provides excellent control. The service brakes and retarding system are actuated by modulated hydraulic pressure, while the parking brake function is spring applied and hydraulic released. This system assures braking in the event of loss of hydraulic pressure.

Operator Present System
The Operator Present System helps to protect the machine and operator from uncontrolled movements. The system automatically engages the parking brake, neutralizes the steering, implement and transmission control, and shuts down the engine in the event operator fails to apply the park brake prior to exiting the cab.

The engine shutdown configuration can be changed by your Cat dealer using the Cat ET service tool.

Standard Safety Features
Anti-skid upper deck surfaces, upper deck handrails, 3-point cabin and machine access, push out safety glass, excellent visibility, suspension seat, passenger/training seat, inertia reel retractable belts, steering frame lock, rear window guard, body retaining pins, automatic retarder control, exhaust heat shielding and firewall fitted standard, hitch hydraulic hoses – burst protection sleeves fitted, tailgate retaining pins (ejector body), alternate exit via windows, ground level compartment sight glasses, hot and cold side of engine.

** Measurement taken with tailgate down for ejector body.
To determine gradeability performance: Read from gross weight down to the percent of total resistance. Total resistance equals actual percent grade plus rolling resistance as a general guide use 2% for rolling resistance in underground application or refer to the Caterpillar Performance Handbook. From the total resistance point, read horizontally to the curve with the highest obtainable gear, then down to maximum speed. Usable rimpull will depend upon traction available and weight on drive wheels.
AD60 Standard Equipment

Standard Equipment

Standard equipment may vary. Consult your Cat dealer for details.

**ELECTRICAL**
- 12V Power Supply In Cab
- Alternator, 95-amp
- Auxiliary Start Receptacle
- Battery Disconnect Switch, Ground Level
- Circuit Breaker, 80-amp
- Corrosive Protection Spray
- Diagnostic Connector
- Electric Starting, 24-volt
- Engine Shutdown Switch, Ground Level – Front Left Hand Side
- Lighting
  - Brake and Tail Light, LED
  - Headlights with Dimmer Switch, Halogen
  - Rear Work Light (Cab Mounted), Halogen
  - Reversing Lights, Halogen
- Low Maintenance Batteries
- Reversing Alarm
