

Cat® LINK Product Link™ /VisionLink®

Fleet management, your way.

You're always looking for ways to work more efficiently. Cat® Connect helps you match the technology and solutions to the work you do. For jobs of any size and machines of any color, you'll get the information you need to manage your fleet and maximize productivity.

See how Caterpillar can help solve your problems with VisionLink® Technology.

Profits going up in smoke? Excessive idle time can send your profits floating out the exhaust stack. Monitor your entire fleet in VisionLink to identify opportunities for increased production. Reduce idle time to lower operating and maintenance costs, increase equipment resale value, and limit impact on the environment.

Tired of looking at multiple screens? Stop hopping between multiple telematics screens. Mixed fleet capability uses data feeds from OEM telematics devices to pull all your data into one single interface, VisionLink. And there's no need to remove your current equipment devices today.

Had enough of paper inspections? Save time and money by using Cat Inspect to electronically document, submit, and log your preventive maintenance and operator daily inspections. Fully electronic and integrated into VisionLink, you can kiss that stack of forms goodbye.

Drowning in data? With VisionLink, you can efficiently view the data that's important to you. Easily set up customized machine health or operator induced alerts to be sent via email or text.

More Options

Mixed fleet data feeds: Using existing subscriptions, view all other OEM connected assets in VisionLink without adding new hardware.

Load and cycle project monitoring: Use your cellular devices to remotely report load counts and cycle times for production assets.

Rapid reporting: Track and trace equipment movement with more frequent hour, location, and odometer updates. Get updates up to every 10 minutes on cellular devices and up to every hour on satellite devices.

Improve Your Business

- Track idle time to improve machine use
- Confidently schedule maintenance for your entire fleet based on known hours
- Eliminate manual location tracking and reporting of your equipment
- Be made aware of inspection items requiring service
- Proactively address operator alerts

Malcolm Long, Diverse Civil and Commercial Projects, Bridgewater, South Australia describes how he uses Cat Product Link to reduce service costs by tracking maintenance schedules and pre-ordering parts for his company's construction equipment.
