

Cat[®] COMMAND

for Excavation

REMOTE CONTROL OPERATION FOR ADDED SAFETY IN HAZARDOUS APPLICATIONS

- When used in a potentially hazardous application, remote control allows the operator to dig, lift, and track from a safe working distance.
- Optional Cat Remote Control is deeply integrated with Cat machine systems to enable smooth, precise control for maximum efficiency and productivity.
- Kit includes everything you need – parts and instructions – for easy installation.
- Over-the-shoulder operator console provides line-of-sight remote control operation from up to 400 meters (427 yd) away.
- For added security, only one operator interface can control the excavator at a time.

> ENHANCED SAFETY

- Operators remain in control of the machine while working outside of the cab and away from harsh and challenging environments.
- The machine will shut down if the line-of-site controller is tipped more than 45 degrees, which could indicate the operator has fallen.
- Improve productivity and reduce operator fatigue by eliminating the effects of vibration and sound.

> EASY-TO-USE CONSOLE

- Operators work safely and comfortably off the machine while remaining on-site and having direct visual contact.
- Controls are fully integrated with machine electronics to provide the same control and response as if operating from the cab.
- Ergonomic controls provide full access to primary machine functions.
- View comprehensive machine information including engine rpm, fuel level, hydraulic temperature, engine temperature, aftertreatment status, operation modes, pressures, and machine warnings through the LCD display.
- Console unlocks with an electronic access card.
