

Solar® Turbines

A Caterpillar Company

Powering the Future Through Sustainable, Innovative Energy Solutions

SOLAR® PARTS

With Solar Turbines you never take on a problem alone, and you get more than just spare parts. You can count on us for 24/7 parts support and the expertise that comes from working directly with the original equipment manufacturer (OEM).

DON'T DISCOUNT SAFETY

With pressure to reduce operational costs, it may be tempting to install non-genuine OEM parts. But gas turbines, high-speed rotating equipment and support systems are complex machines, and replacing components with non-genuine OEM parts can lead to higher installation costs, installation delays, performance reductions and potential damage to other safety-critical turbomachinery systems. Using genuine Solar® parts helps protect your personnel, your equipment and your production.

BEST DESIGN FOR YOUR EQUIPMENT

With Solar's fleet of 16,000 installed turbines worldwide, our engineers are continually learning and improving parts performance and durability. We also replace parts with a high frequency of failure with better components. Our technical support group creates service bulletins to notify you of the issue and recommend actions you can take. All service parts meet your original package needs and are designed for easy installation and setup. We use your package history to deliver the best parts option for environmental and operational limitations.

PARTS STOCKING EVALUATION

Solar can reconcile your recommended spare parts list with your current inventory, provide lead time for just-in-time parts manufacturing, and offer trained technicians for installation. An investment in Solar parts inventory – combined with a proactive maintenance program – results in more reliability, better lifecycle management, greater risk avoidance and improved operator safety.

FAST DELIVERY

The Solar parts fulfillment center is located close to Atlanta, Georgia, a major US logistics hub that is well positioned to support on-time parts delivery for both domestic and international operations. In addition, our service parts distribution channels are strategically located around the world to ensure you receive the parts you need when you need them.

MULTIPLE PARTS OPTIONS

Whether your package is new or has already provided decades of valued service, Solar provides a part that is identical in form, fit and function. We can also deliver a kit that bridges any differences in form or fit but offers the same functionality – ideal for obsolete systems. In addition, we give you the opportunity to return some worn components for core credits. In return, you receive top quality, durable remanufactured service parts at a reduced cost.

Whichever option you choose, our extensive field service and engineering network ensures that your parts are installed right, and right on time.

CONTACT SOLAR SERVICE PARTS TODAY

You'll find Solar service parts online at **shop.solarturbines.com**. Online search capabilities allow you to access your package by system or view service parts by category and place items in your cart for purchase.

Contact Solar service parts personnel for more guidance on selection or ordering. Call **+1-800-765-2750** or email us at **domesticparts@solarturbines.com**.
