Power range 1500 rpm1270-1937 kWm (engine gross power)EmissionsFuel optimised

The Perkins[®] 4000 Series family of 6, 8, 12 and 16 cylinder diesel engines was designed in advance of today's uncompromising demands within the power generation industry and includes superior performance and reliability.

The 4016TAG are turbocharged, air-to-air chargecooled, 16 cylinder vee form diesel engine.

Its premium design and specification features provide economic and

durable operation as well as exceptional power to weight ratio, improved serviceability, low gaseous emissions, overall performance and reliability essential to the power generation market. The 4016TAG are specially tuned for improved load acceptance response in standby duty.

Features and benefits

- Individual 4 valve cylinder heads giving optimised gas flows and unit fuel injectors ensure ultra fine fuel atomisation and hence controlled rapid combustion **maximising productivity**.
- Commonality of components with other engines in the 4000 Series family for reduced stocking levels and **ease of integration**.
- Designed to provide **low cost of ownership**, simple maintenance and reduced downtime.
- Perkins engines are designed and developed with our customer in mind. Keeping service cost to a minimum ensures **low periodic running costs**. This is achieved through 500 hour service intervals for oil and fuel as standard under all operating conditions.
- The long productive life of our products is supported through the Perkins 12 month warranty as standard for prime power applications. For further peace of mind, there is also the option to purchase Extended Service Contracts through Perkins Platinum Protection. Contact your local distributor or visit www.perkins.com/en_GB/ aftermarket/perkins-platinum-protection.
- Perkins takes pride in manufacturing all products globally to the same **high quality standard**. All of our products are manufactured in world class facilities to ensure highest quality for your peace of mind.

Baseload power: Power available for continuous full load operation. No overload is permitted.

Prime power: Power available at variable load in lieu of a main power network. Overload of 10% is permitted for 1 hour in every 12 hours of operation.

Standby (maximum): Power available at variable load in the event of a main power network failure. No overload is permitted.
