F2 backhoe loaders

(and newer) quick disconnects have changed to "Twist to Connect." F series and earlier models have "Push to Connect." If you have auxiliary hydraulics on the front, these are the correct Quick Disconnects.

COUPLINGS QUICK DISCONNECT – LOADER			
Twist to Connect Kit (M45) *(Includes male and female)*	455-7380	*Male* 439-1589	*Female* 439-1588

QUICK COUPLER KIT	
Part Number	**Description**
472-4303*	Enables machine to use IT worktools. Includes the quick coupler, electrical harness and switches in the cab front console. For use with 432F/F2, 426F2, 428F/F2.
472-4304*	Enables machine to use IT worktools. Includes the quick coupler, electrical harness and switches in the cab front console. For use with 444F/F2, 434F/F2.

**Requires front aux lines (MP) already to be installed on the machine.*

QUICK COUPLER KIT – NEXT GENERATION LOADER – IT	
Part Number	**Description**
596-8446*	For hydraulic IT coupler installation on Single Tilt machines. For use with 415, 416, 420, 420XE, 430
539-6387	For hydraulic IT coupler installation on Single Tilt machines. For use with 440 and 450

**Requires 625-7641 kit harness when used with F2 machine models.*

BACKHOE BUCKET PINS – SPARE	
Pins, BHL (415-444) – 45 mm/50 mm	178-3593
Pins, BHL (450) – 60 mm/60 mm	556-3635

Cat® Augers offer different speed and torque options for work in a variety of soils. The speed and torque are engineered to extract soil efficiently and prevent stalling in dense ground. Select from a range of auger bits.

Snow Plows are designed for snow removal applications in parking lots, driveways, airport runways and storage lots. The plow design scrapes the surface and can angle to windrow material to one side. The trip edge system protects your machine and tool from unseen obstacles by retracting from objects such as manhole covers or large rocks.

IT Coupler Snow Push

Straight Snow Pushes

are designed for optimal snow removal or any material pushing application. Designed to roll and fold snow with a profiled mold board, the Straight Snow Push maximizes the amount of snow being pushed. Once material is contained and displaced, streamlined box supports ensure that snow does not cling to the tool, increasing productivity. The Cat Straight Snow push also features a standard trip edge system which protects your machine and tool from unseen obstacles.

Bucket Receiver Snow Pushes

Bucket Receiver Snow Pushes are designed to mount to the machine without having to remove the machine bucket. This is ideal for machines not equipped with a quick coupler option. The bucket receiver snow push is secured to the machine by sliding the cutting edge of the bucket into the receiver arms, then fastening chains around the bucket of the machine. The chains are easily tightened by using the over center load binders that are attached to the snow push. For use with any bucket that does not have a cutting edge or teeth.

Caterpillar offers ten types of backhoe buckets for Cat backhoe loaders. While they share many common features, each is designed to perform certain specific tasks. All buckets are pin on unless a pin lock option is available.

CEMETERY BUCKETS

Offer the ability to dig trenches with vertical walls and a flat bottom due to the special design. This type of bucket is used in trenching graves and other applications that require this profile, such as tanks and swimming pools.

CORAL BUCKETS

Four widths designed especially for rocky coral conditions such as those found on coastlines.

CRIBBING BUCKETS

Designed with a very narrow profile offering the capability to clean and maintain in between and under railroad ties. Ideal for light trenching on moderately abrasive soils.

DITCH CLEANING BUCKETS

Three widths designed to provide optimum trenching, slope-cutting, grading and finishing.

GRADING BUCKETS

Available in two widths, these are designed to provide optimum grading, trenching, slope-cutting and finishing work, in addition to nesting additional buckets for ease of transportation.

HEAVY DUTY BUCKETS

Available in six widths (pin on and pin lock), all with standard Diagonal Retention System adapters and teeth. They are especially well suited for semi-rocky soil or where hard bank material must be broken out and removed.

HEAVY DUTY ROCK BUCKETS

Available in five widths, all with standard Diagonal Retention System adapters and teeth. These are specifically designed to work in harsh rocky conditions found in various regions.

HIGH CAPACITY BUCKETS

Available in four pin-on widths and six pin lock widths. High capacity buckets are especially well suited for work in lower density soils and light materials. They have the same durable characteristics as heavy duty buckets but are capable of moving greater volumes.

SOIL EXCAVATION BUCKETS

Available in four widths, these buckets have heavy duty characteristics with higher capacity for use in a variety of conditions including heavy impact situations. The more aggressive adapter nose angle combined with the new tip design provides enhanced productivity in all soils, plus longer wear and sharpness in rocky areas.

STANDARD DUTY BUCKETS

Available in five widths, all with standard Diagonal Retention System adapters and teeth. These buckets are designed for general light duty excavation in soft soil or clay.

GROUND ENGAGING TOOLS (G.E.T.)

Made from through-hardened DH-2 steel, both the tips and adapters of the Diagonal Retention System (DRS) deliver optimal strength and resistance to abrasive wear. The DRS features a right-hand drive pin slot at a 40° angle from the previous horizontal system.

BUCKET TEETH ATTRIBUTES AND APPLICATIONS	
Long	**Attributes:** • Long, symmetric, top and bottom self-sharpening cavities • Good strength, penetration and wear material **Applications:** • General excavation and loading • Low to moderate impact and abrasion
Chisel	**Attributes:** • Flat bottom design **Applications:** • Moderate impact and high abrasion for footing, steam walls or a clean trench floor
Soil	**Attributes:** • Through-hardened DH-2 steel fabrication **Applications:** • Hard soil job sites • Non-abrasive, low-impact situations
Penetration	**Attributes:** • Leading edge with 60% less cross-sectional area • Single center rib that self-sharpens during wear **Applications:** • Densely compacted materials
Wide	**Attributes:** • Flat bottom design • Reduced spillage **Applications:** • Increased bucket capacity situations • Cohesive material with minimal penetration needs
Sharp	**Attributes:** • Curved shape • Strong and durable **Applications:** • Densely compacted materials
Sharp–Twin	**Attributes:** • Curved shape • Very good penetration • Stays sharp **Applications:** • Hard-to-penetrate fracturable materials

Compaction wheels provide a low-cost option for trench compaction. The wheels feature tapered roller bearings and tampered foot design for smooth operation. Six to ten passes are usually adequate to achieve compaction in normal soil conditions, dependent on the required compaction levels. Pin on compaction wheels can be used in combination with an applicable pin grabber quick coupler.

Cold planers are designed for small paving jobs in residential and commercial applications and are primarily used to economically restore asphalt and concrete surfaces. Designed with a high-speed drum and conical bits to quickly remove asphalt and concrete. They are ideal for milling imperfections prior to resurfacing, removing deteriorated pavement, removing traffic lane stripes and jobs where the use of dedicated planers is limited.

Cold Planer

Cat Rakes are designed to remove roots from the ground. This attachment is also used to pile up branches, logs or roots during a land cleaning application. Helpful when the operation requires removal of material but not the dirt.

Rake

Built to cut through dense dirt, loosen rocky soil and break below the frost layer, Cat rippers take on some of the most challenging conditions. Plus, because they are made for specific Cat models, they can better transfer machine power into ripping power.

Ripper

Vibratory plate compactors provide superior compaction in a reliable, low-maintenance package. These units produce high-power impulses at a rate of 2200 impacts per minute. Whether in a trench or on a slope, driving sheeting or posts, Cat compactors are the superior choice for any job site.

Thumbs are versatile tools designed to work with the Cat backhoe loader bucket to easily grab, pick up, handle and load irregular or loose material which would otherwise be difficult to handle with a bucket only. Thumbs are ideal for handling wooden logs, poles, brush, metal, trash, rock and debris in site cleanup, land clearing, landscaping, material handling and construction applications.
