

## Novatech<sup>®</sup> Pistons utilize Novatech's proprietary black high-temperature polyurethane material with a traditional flex-lip design.

This high temperature polyurethane is a developed compound, rated to 300°F and available only through Novatech<sup>®</sup>.

The Novatech<sup>®</sup> piston uses a single durometer material, as opposed to traditional dual durometer designs. Because of the high strength of the polyurethane at elevated temperatures, a dual durometer material is not necessary. Dual durometer materials increase cost and introduce another potential failure mode in the bond between the two materials. To eliminate this weak point, reduce costs and produce a more reliable piston, Novatech<sup>®</sup> pistons are single durometer polyurethane.

Part	Number Size
SA-4.5-BU-H	4.5 inch
SA-5.0-BU-H	5 inch
SA-5.5-BU-H	5.5 inch
SA-6.0-BU-H	6 inch
SA-6.5-BU-H	6.5 inch
