

Cat® Seat Belt Reminder

Safety Upgrade

INCREASE OPERATOR SAFETY AWARENESS

Wearing a seat belt is one of the simplest and most effective ways to stay safe while operating heavy equipment. The Cat® Seat Belt Reminder is a simple and cost-effective safety upgrade to prevent accidents and help ensure a safe job site by reminding operators to buckle up.

- Provides an in-cab audio alert to the machine operator if the seat belt is not fastened and the machine begins to move.
- Integrated buckle LED provides a visual reminder to latch the seat belt before machine operation.
- Optional dashboard light and amplified alarm provide additional notifications to the operator.
- An external beacon can be installed on top of the cab to visually alert site supervisors if an operator is working without their seat belt fastened.
- Easily monitor operator safety compliance through Cat® Equipment Management solutions.
- Simple to install – compatible with all equipment brands.

Seat Belt Reminder System Overview

**2 Point Lap Buckle with Comfort Ride Sleeve (CRS-95) Shown – Other Configurations Available*

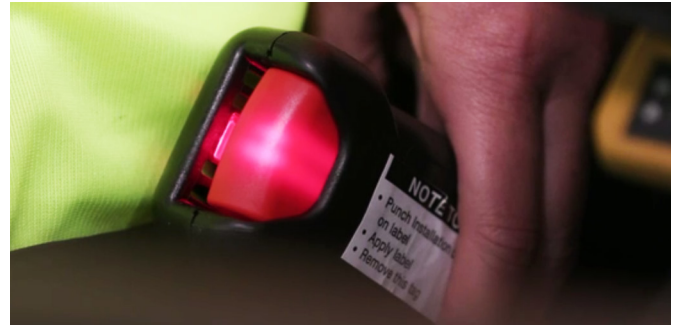

> MONITOR SAFETY

- Cat Equipment Management solutions monitor seat belt alerts to keep managers aware of operator compliance.
- The Cat App provides seat belt notifications on the go from your phone or tablet and is available for free on [Google Play](#) and the [Apple App Store](#).
- VisionLink™ is a subscription-based telematics software solution that delivers customizable dashboards with real-time updates on the condition of your equipment.
- Seat belt alert reports can be generated from VisionLink™ to help train operators and maintain historical safety records.

> HOW IT WORKS

- The seat belt reminder detects when the seat belt should be in use by monitoring the machine's parking brake switch.
- In order to operate the machine, the operator must turn off the parking brake.
- If the seat belt is not buckled when the parking brake is off, the seat belt reminder alarm will sound (audio alert), and the warning light integrated into the buckle will illuminate (visual alert).

Integrated Buckle Warning Light

> ENSURE COMPLIANCE

- Failure to wear a seat belt not only presents a safety risk, but it may also violate regulations.
- Even a single infraction can shut down productivity and possibly result in penalties or fines.
- It is recommended to replace seatbelts every three years, regardless of machine hours – follow the guidelines in your machine's operation and maintenance manual.

> SIMPLE INSTALLATION

- The universal belt kit can be retrofitted on all brands of equipment – ideal for mixed fleet use.
- The complete system can be installed in less than 2 hours using existing seat belt mount locations.
- The belt reminder can be used in any closed cab machine with a 12V or 24V system.
- Seat belts are available in various types and sizes to provide the flexibility required for mixed fleet installations.
- Optional dashboard light, amplified alarm, and external beacon available – consult dealer for details.

SEAT BELT SPECIFICATIONS				REMINDER ECM AND HARNESS
PART NUMBER	BELT TYPE	WEBBING SIZE	BUCKLE TYPE	PART NUMBER
396-4056	Lap – 2 Point	2 inch	CRS-95	513-5984
396-4057	Lap – 2 Point	3 inch	CRS-95	513-5984
396-4061	LH Shoulder – 3 Point	3 inch	CRS-95	513-5984
396-4062	RH Shoulder – 3 Point	3 inch	CRS-95	513-5984
396-4058	Lap – 2 Point	2 inch	Steel Strap	513-5984
396-4060	Lap - 2 Point	3 inch	Steel Strap	513-5984

NOTE: Seat Belts and the Seat Belt Reminder ECM are sold separately. ECM is required for machines not configured to accept seatbelt reminder.

> HOW TO UPGRADE
