

SAFE, CONSISTENT & EFFICIENT DOZING WITH COMMAND FOR DOZING.

Command for dozing offers multiple levels of remote control, delivering value across the entire operation through consistent dozing, increased safety, greater operational efficiency, reduced operational waste and lower costs.

- Gives operators full control of the dozer while protecting them from on-site dangers and long-term exposure to dust, noise and vibration.
- Is scalable and flexible with three modes of operation: an over-the-shoulder, portable console; a remote operator station, where the operator can work in a comfortable, seated position with familiar controls; and semi-autonomous operation, which allows a single operator to manage multiple machines.
- Is deeply integrated with Cat® machine systems to enable smooth, precise control for maximum efficiency and productivity.
- Delivers more consistent dozing, improves equipment utilization and increases shift-long operator efficiency.
- Improves productivity and efficiency by making it possible for one operator to control multiple dozers.
- Allows application of geo-fencing and Avoidance Zone capabilities from Cat MineStar Terrain.
