CAT° MINESTAR" COMMAND

IS AUTONOMY RIGHT FOR YOUR MINE SITE?

Autonomous haulage has the potential to deliver substantial productivity improvements and cost savings. But is it the right solution for your operation?

Here are six key considerations to look at when trying to determine if your site is a good candidate for autonomy.

1. SAFETY

Are there potential safety issues that could be alleviated with autonomy?

Autonomous haulage improves site safety by reducing operator exposure to dust, noise

and vibration and by removing tired or fatigued operators from mobile equipment. How could it help your site reduce lost time injuries or address other safety concerns?

2. UTILIZATION

Are you experiencing significant delays that affect fleet utilization?

With no operators on board, delays such as

shift changes, lunch breaks, meetings and training, incidents, etc., would be eliminated. Increased utilization may even let vou reduce vour total fleet size. How would those changes affect your operation?

How much efficiency could you gain through consistent, reliable truck performance?

Autonomy can help increase productivity by reducing truck exchange times while also operating in conditions that might shutdown manned operations. Also, autonomy eliminates driver-influenced inefficiencies, such as trucks bunching behind an overly-cautious driver or dilution caused by loads going to unassigned locations. How would more consistent truck performance affect your site's overall efficiencv?

6. REMOTE REGIONS

How do the logistics

costs?

of bringing workers to

your location affect your

4. TRUCK DEPLOYMENT

How often do you need to quickly change the number of trucks on a haul circuit?

Autonomy offers the ability to quickly add or remove trucks on a circuit. Plus, it's not dependent on the number of operators who show up for work on a given day. What would those factors do for your operating costs and production totals?

5. SKILLED PEOPLE

it can be difficult to attract skilled

people who are able to handle the

required on site. How will a larger

rigors of a mining lifestyle. Autonomy

lets you reduce the number of people

talent pool help your operations grow?

How difficult is it for your operation to find or retain skilled people?

No matter where

vour site is located.

Transporting, housing, and feeding large workforces as well as building and maintaining the necessary infrastructure to support remote operations presents challenges and significant expenses. Autonomy lets you reduce both the number of people and infrastructure

requirements on site. How would that affect your annual operating costs?

TAKE COMMAND

Cat[®] MineStar[™] Command is proven to work seamlessly with and around all mine site activities. *Learn more*.
