

Complete signal structure solutions designed for every environment

We have the engineering and software expertise to help you meet your signal and communication requirements, we also have the ability to deliver complete manufactured structures, and take care of installation and maintenance, too. We manufacture cantilevers and gate assemblies for grade crossings, signal bridges and mast ladder platforms for wayside signaling systems, in addition to other unique structures, such as flood platforms. Our wire shop excels in the manufacture of top quality custom Local Control Panels and Cutover Test Panels designed to site specific locations. Whatever the size or the need, our

signal team can build it. As a leader in the rail crossing, signal installation and maintenance business, Progress Rail provides field management and construction services for large, ongoing projects. We provide a turnkey approach, from survey through design and installation— so you can contact one company to handle your signal needs. We design, build and install on average 100 turnkey signal packages per year. We also offer contract services to maintain, test and supply material for highway railroad intersections. Progress Rail has continuing contracts with more than 80 railroads and industries.

Capabilities:

Our full line of Signal Products includes:

- Flashers / Gate flashers
- Grade Crossing Cantilevers and Bridges
- Wayside Cantilevers & Bridges
- Mast Ladder Platforms (MLP)
- Flood Platforms
- Turnkey signal systems
- Signal Control Houses

Gate / Flasher Access Platform

The Gate / Flasher Platform makes it easy to perform maintenance on the gate mechanism, on any given landscape slope.

- Excellent for steep grade slopes
- All aluminum construction
- Aluminum Serrated Floor Grating
- Sturdy hand rail on three sides
- Large platform space
- Safety in mind
