

**CAT® DETECT WITH
REAR CAMERA**

A VISIBLE DIFFERENCE

CAT® SAFETY UPGRADES

HERE TO BACK YOUR OPERATION

More than 20% of workplace fatalities in the United States occur in the construction industry, according to the U.S. Bureau of Labor statistics. We know your people come first and that's where **CAT® REAR CAMERA** comes in.

The **Rear Camera** system gives operators an extra set of eyes. Equipped with a high-definition camera and a touchscreen display mounted in the cab, **Rear Camera** offers a view of what's behind the machine. With more visibility, there's less risk and more productivity at your job site.

BEHIND THE SCENES

Rear Camera is a multi-component safety system designed to increase rear visibility and enhance the operator's awareness of their surroundings. Here's how:

A high-definition camera placed at the back of the machine allows operators to have rear visibility.

An in-cab mounted display gives the operators a high-resolution view — allowing them to notice small, important details.

Real-time transmission shows operators what's happening, while it's happening.

View options give you the choice of rear display at all times, or when the machine is in reverse only.

SAFETY AT THE SITE

The Rear Camera system helps you achieve your operational goals by doubling down on safety and displaying commitment to your worksite. **Decreased blind spots, more awareness and boosted confidence** lead to job site advantages like:

Fewer
accidents

Less
downtime

Reduced
injury costs

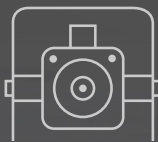

Cost savings
due to fewer
spotters needed

Increased
operator comfort

AN EASY ADDITION TO YOUR SAFETY EQUATION

Adding the Rear Camera system to your entire fleet—Cat machines and other brands — is an easy way to boost your job site safety. The Rear Camera system can be installed on any 12- or 24-volt system, and it only takes four to six hours to install.
