## FEATURE UPGRADES »

Start with the best in efficiency, effectiveness and power – and then make it even better with upgrades that enhance our most popular features. From the latest generation of advanced control joysticks to satellite linked telematics, these feature upgrades make the connection between operator and equipment more intuitive, responsive and flexible than ever.

### Advanced Control Joysticks

Meet the next generation of joysticks that enable operators to keep their hands on the controls at all points of operation. These joysticks add all-grade control functions and attachment controls to the existing joysticks and can be programmed to control any auxiliary attachments added to the machine.

## Auto Shift

Automatically shifts the transmission at optimal shift points without operator input.

## Cat Grade Solutions

Cat Grade systems are deeply integrated into each machine, so they are easy and intuitive to operate. These productive systems help bring inexperienced operators up to speed quickly, while enabling pro-level operators to perform better than ever.

- **Cat Grade Attachment Ready Option (ARO)**  
Ensures the machine is ready for 2D and 3D systems with wiring, sensor mounts and blade/moldboard mast brackets.
- **Cat Grade Cross Slope**  
Includes ARO and provides the sensors. The Cat Grade 2D control system brings the customer an increase in productivity by up to 40% while reducing their site costs dramatically. The revolutionary Caterpillar solution is factory integrated, sensor -independent and features a suite of products while includes cross slope, sonic, laser Global Positioning System (GPS), and Advanced Tracking Sensor (ATS) technology.
- **Cat Grade 3D**  
Built on top of Cat Grade ARO & Cross Slope, the Cat Grade with 3D is an integrated grade control system that enables operators to improve grading efficiency, accuracy, and productivity in both rough grading and finish grading applications. The integrated design positions low profile antennas on the cab, roof and front frame eliminating conventional blade-mounted masts and related cables.

## Auto Articulation

Auto articulation seamlessly adds articulation with steering input to simplify operation, improve maneuverability and reduce the turning radius of the machine.

## Stable Blade

Stable blade eliminates machine bounce by adjusting the throttle when bounce is detected. This prevents surface damage, improves operator comfort and increases productivity by reducing rework passes.

## Blade Cushion Accumulator

Blade Cushion Accumulators absorb vertical shocks and prevent damage to the drawbar, circle and moldboard when the moldboard contacts immovable objects. This option is especially useful in rough grading and rocky areas. Avoid unintended machine movement for increased operator safety.

## E-Fence: Blade Avoidance

This is specific to motor graders and when it is activated, it prevents the moldboard from contacting the tires, step ladders, and the circle. This eliminates potential damage to the link bar. Great for new and experienced operators. E-Fence is available when the machine is equipped with the 3D Mastless System.

## Reversing Fan

The reversing fan provides two modes: “automatic” and “manual”. The automatic mode will engage the reversing fan at a pre-set time interval to purge the intake screen. This is ideal for customer applications that require cleaning of the cooling package when operating in high debris applications.

## Powered Cab Air System

### BENEFITS »

- Powered HVAC precleaner designed to increase fresh air filter life.
- Includes a precharge fan to improve cab fresh-air filter life.
- Increases the fresh-air flow into the cab, increasing cabin pressure

## Cat Product Link™

These cellular and satellite-linked Cat telematic offerings enable accurate monitoring of machine location, fuel status, utilization data and product health information at your fingertips.

## Auto Differential Lock

Standard automatic differential lock/unlock monitors machine and application parameters to unlock/re-lock the differential during operation, improving production and enhancing comfort while protecting the power train. It's standard equipment on all new models, and can be retrofitted on first generation M Series models.

## Motor Graders Technology Performance Bundle

Bring your motor grader up to current factory standard production with integrated technologies. Our Technology Performance Bundle includes the four integrated technologies below in a kit that has a cost savings over ordering the individual kits.

### Advanced Joystick Control

- Easy to operate technology functions
- Keeps hands on the controls
- Reduces hand movements
- Allows operator to focus on work

### Stable Blade\*

- Detects machine bounce
  - Automatically reduces machine bounce to improve grading precision
  - No operator effort required
- \*This product was previously known as Stable Grade

### ARO

- Prepares machine for upgrading to all grade control options
- Adding grade control systems will save time, fuel, and resources

### Auto Articulation

- Automatically articulates while steering
- Enhances maneuverability
- Reduces operator inputs

## Digital Blade Slope Meter

The digital blade slope meter shows the blade slope angle on the main display. This feature allows the operator to quickly check across slope when the front and rear frame are aligned, and the moldboard is perpendicular to the machine.

## Cat Production Measurement System

Cat Production Measurement (CPM) is built on 2 applications: Efficiency Coach and Application Segmentation. Efficiency coach will save up to 15% fuel. Application segmentation tracks location machine and application of the machine (road, waiting, blading or ripping).

## Machine Security System

Machine Security System (MSS) provides a security solution for rental machines, remote worksites, multiple contractor worksites, high theft areas or any situation where limiting machine access is required.

## Remote Services

This is a suite of capabilities at your fingertips. This includes remote flash for software updates, remote troubleshooting, and local service using cellular data.

## ACCESSORIES »

Little things can make a big difference. Sometimes a worn out circle pinion or an iced-over window is all that stands between you and getting a job done. These accessories can give you a little more room in the cab, a better view of what's behind you and the right replacement part at the right time. Best of all, they can give you peace of mind.

## Finish Grade Ready Kit

This kit includes all critical drawbar, circle and moldboard wear parts to restore and maintain factory tightness. It includes circle shoe wear strips, drawbar and moldboard wear strips and shims, moldboard wear strip end plates and moldboard wear strip hardware.

## Cat Air Compressor

Onboard compressed air supply for filling tires, changing cutting edges and blowing out cooling package.

## Cab Storage Kit

Make the most of your cab space with these innovative and easy-to-install floor-mounted and headliner storage bins.

## Heated Front & Right Hand Side Glass

Optional heated front glass and heated right hand side glass makes operation during inclement weather safer and easier.

## Mirror Extensions

Get the performance of our side mirrors with extensions for expanded visibility. This option is available for standard and heated mirrors.

## Circle Saver

This low cost solution for motor graders keeps the circle pinion greased via a remote port on the top of the drawbar. That extends both pinion and circle gear life and makes your equipment even easier to maintain.

## High Back Seat

Improve operator comfort with the High Back Seat. Along with the high back, this new seat offers heat, softer cushion, and longer arm rests. \*Only available on 140 LVR.

## Moldboard Pivot Pin (Lubricated)

Moldboard pivot pin provides this redesign of the moldboard pivot pin. To improve life of our pivot pin and decrease downtime, this new design will keep tolerance tight and prevent premature wear.

## Jump Start Cables

There are two cables that can be used to provide power to a stalled machine through power receptacles. Select from receptacle to receptacle (machine to machine) or from terminal to receptacle (power pack to machine).

## Rear View Camera

The camera is mounted to the rear of the hood and is connected to a dedicated color display mounted in the cab, which shows the view behind the machine. Some come with additional safety features that allow you to always have the display on, or a heated lens on the camera to prevent snow build-up.

## Zero Camber Lean Bar

This will change the camber angle of the front wheels to zero degrees. This change will improve the life of the front tires in certain applications. \*tandem only

## Beacon / Beacon Guard

Beacons have bright bulbs affixed to a base to help keep the jobsite safe by helping crews know what equipment is in use. Guard helps to protect the beacon from damage and extend the beacon life.

## Fast Fill Fuel

A fast fill fuel system allows speedy refueling of vehicles and increases operator safety. Fast fill systems in general allow for ground level refueling and automatic shut-off upon a full tank.

## Front Axle Steering Cylinder Guards

Get the extra protection you need for your steering cylinder hose routings.

## Object Detection

This is designed to increase safety and visibility during machine startup, initial movement and always in reverse. When radars are active, the system alarms only when the machine is in gear and in the direction of a detected object.

## Blade Extensions

Provide up to 20% more productivity with genuine Cat blade extensions.

## Swing Out Windows

The swing out windows provide operators with an easy way to bring fresh air into the cab during machine operation and enhance the visibility to work tools.

## Ground Level Fueling

Ground level fueling increases safety by creating a convenient, easily accessible fueling station for operators.

## Tire Monitoring System

The digital tire monitoring system shows the tire pressure on an additional display. This feature allows the operator to quickly check pressures and ensure the health and life of the tire is being monitored live.

## Seat Belt Indicator

The seat belt indicator ensures safety and compliance for the entire fleet. It uses both audible and visual warnings to remind the operator when the seat belt is not latched.

\*Product link compatibility

## ATTACHMENTS »

Cat motor grader attachments are engineered and built for maximum performance. Whatever your business – construction, forestry, landscaping, waste and recycling – the right attachment can help provide a total system solution. From snow plows to blades, Cat attachments maximize the power and productivity of your motor grader.

## Straight Front Blade

The Cat straight blade is effective for snow removal, grading, land-leveling or dozing. It's available in widths and heights to match virtually any application and machine size.

## Manual / Hydraulic Angle Front Blades

In addition to all the benefits of the Cat straight front blade, this product features 30° of hydraulic left- or right-angle capability. That means increased material control during conventional dozing operations.

## Fenders

Fenders are used to help prevent mud, snow, and debris build up and to protect your equipment.

## Front-Mounted Hydraulic Broom

Cleaning loose rocks or debris covering intersections and roads is quick and easy with this attachment.

## Push Block / Counterweight

The Cat push block is mounted to the motor grader nose plate. It acts as both a counterbalance for the rear ripper and as a push point in environments where the motor grader might be used as a push vehicle.

## Front Lift Group

The front lift group makes attaching front-mounted work tools to the motor grader quick and easy. Hydraulics and mounting plates may be needed, depending on the configuration of your machine.

## Front-Mounted Scarifier

A front scarifier hooks to the front lift group and is normally used for light work. Designed to break up compacted material, asphalt and rocky subgrade, this attachment helps maintain grading.

## Mid-Mount Scarifier

A mid mount scarifier has better control of cut depth, improved visibility and ability to fracture harder material. Get the performance and effectiveness you expect with equipment and jobs better suited to a mid mount unit.

## Rear Ripper / Scarifier

This rear-frame mounted attachment is used for breaking up hard-packed ground or asphalt aggregates in preparation for grading. The ripper shanks are used for heavy ripping; the scarifier shanks are used for light work where maximum surface fracture is desired.

## SNOW SOLUTIONS »

Motor graders are excellent for snow removal, whether equipped with a standard moldboard, snow wings, V Plows or straight blades. Each of these attachments are tailored to different snow removal applications, but all of them help provide the power and safety you need to clear long stretches of road efficiently and effectively.

## Cold Weather Package

These kits improve cold weather operation by ensuring machines are able to idle in cold weather for an extended period of time without decreased machine performance.

## U/V Angle Blade

The Cat U/V angle blade is the most versatile blade available for a motor grader. It has the capabilities of operating as a straight blade, angle blade, U-blade or V plow. It has auxiliary hydraulics and an optional diverter valve to enable operator-controlled blade changes between all four configurations.

## V Plows

The Cat V plow is designed for severe snow clearing applications like opening uncleared roads. The V plow cuts the material and displaces the snow in both directions for maximum high-speed, single-pass snow clearance.

## Mastless Snow Wings

Designed to provide maximum visibility in high- or low-speed snow clearing applications, the Cat mastless snow wings excel at clearing and benching drifted snow, especially on shoulders, and ramps up to a 40" bench height.

## Masted Snow Wing

The Cat masted snow wing is especially effective at clearing and throwing deeply drifted snow. The snow wing is designed to displace material far back from the road to facilitate continued snow displacement.

## Curb Stop/Trip Edge

Get the trip functionality of the trip blade with an edge attachment that can be mounted to your existing moldboard.

## Straight Front Blade

The Cat straight front blade is effective for snow removal. It's available in widths and heights to match virtually any application and machine size.

## Angle Front Blade

In addition to all the benefits of the Cat straight front blade, this product features 30° of hydraulic left-angle or right-angle capability.

## Trip Blade

The Cat trip blade curvature increases capacity and allows for maximum productivity in clearing snow. Trip capability protects both the operator and machine when hitting immovable objects is a concern.

## Sy-Klone Air Cleaner

You can extend your air filter's life by dramatically reducing the debris that gets through the air intake. That means improved performance and reduced maintenance in heavy snow applications and dusty environments.

## Customer Value Agreements

Every piece of Cat equipment is designed and built to provide maximum productivity and operating economy throughout its working life. Your Cat dealer can help you maintain that built-in value through a Customer Value Agreement (CVA).

### **What is a Customer Value Agreement?**

A CVA is any arrangement between you and your Cat dealer that helps you lower your cost per unit of production. Agreements are tailored to fit your business needs and can range from simple Preventive Maintenance Kits to sophisticated Total Cost Performance Guarantees. No matter which option you choose, you can be assured that your Cat dealer will provide you with careful planning and ongoing attention that will help you succeed.

When you have a CVA with your Cat dealer, you have more time to do what you do best – run your business. Trained dealer technicians assist you by maintaining your equipment and driving down operating costs. In the end, everyone's goal is the same: helping you get more work done at a lower cost.

### **Perhaps the Most Important Feature of Any CVA is Flexibility.**

There are no pre-set requirements or specific products and services that you must agree to buy. In every case and with every piece of equipment, a CVA is an individualized plan. Depending on your needs, your costs can be a flat rate monthly fee or some other arrangement based on actual production hours. Your agreement may include as few or as many pieces of equipment as you wish. You can cover individual systems, single pieces of equipment or entire fleets. Your Cat dealer will work with you to determine the best strategies to maximize productivity and minimize costs for both your Cat equipment and competitive equipment.

Customer Value Agreements are not just for large pieces of equipment, and they are not just for new equipment, either. The need to get more work done at a lower cost is the same, regardless of age or application.

### **A Partnership That Gets More Done.**

In the end, a CVA is a partnership between you and your Cat dealer that will help you succeed by leveraging the equipment management expertise of Caterpillar. When you and your Cat dealer team up with a CVA, you get more than just a piece of Cat iron, you get the company.

# WEAR PARTS »

When machines work as hard as Cat motor graders do, there's going to be wear and tear. Replacing and maintaining certain smaller parts can protect and preserve more critical components. Spares for these parts are good to have around, because fixing little problems before they become big ones keeps costs down and productivity up.

# LED LIGHTS »

Shutting down a machine to change a light bulb may not seem like a big deal, but unexpected downtime is never a good thing. Cat LED work lights don't have filaments that burn out or bulbs that need to be replaced. With more than 40,000 hours of expected life, you can count on them for bright light and increased productivity.

# GRADERBIT2™ SYSTEM »

GraderBit2 System is ideal for finish grading, maintaining roadways or reconditioning haul roads. Tungsten carbide cutting bits deliver up to 20x wear life of through-hardened cutting edges. 7 different bit designs can form a continuous edge or 10 serration patterns that allow pass-through of 15 to 60mm aggregate.

552-8522	3' Center Adapter Board	3'	0	2	0
552-8523	Right Hand Adapter Board	2'	2	2	2
Number of Angling Plates Needed			12	14	16
Number of Bits Needed			60	70	80

## Bit boards that are built to perform in your application

Grooves cast into the boards accept weld overlay or material packing in order to extend board wear life, while installing and removing the boards is made easier through pre-drilled lifting eye holes. Adaptor boards feature an off-set design that ensures optimal bolted joint strength and consistent bit placement.

# GRADERBIT2™ SYSTEM »

Bits are installed effortlessly with no tools thanks to pull-ring pin that inserts into the bit shaft and locks over the bit. Bit Life is optimized at any cast angle thanks to Angling plates that always keep the bits facing the direction of travel.

ANGLING PLATES			
PART #	DESCRIPTION	ANGLE	LENGTH
552-9410	Angling Plate	0°	1'
552-9411	Angling Plate	5°	1'
552-9412	Angling Plate	10°	1'
552-9413	Angling Plate	15°	1'
552-9414	Angling Plate	20°	1'
552-9415	Angling Plate	25°	1'
552-9416	Angling Plate	30°	1'

ANGLING PLATES	
PART #	DESCRIPTION
132-3812*	Pull Ring
562-9545	Bearing Sleeve

\*For service replacement only. Pull rings are included with bits.

## Retention that installs without tools and adjusts to your grading conditions

- Bushings reduce board damage during extreme operations and can be replaced to extend board life
- The bit shaft fits into the angling plate to prevent bits from rotating. 7 plate options allow for a 0 to 30 Blade cast angle in 5 increments.
- The pull-ring pin makes bit installation / removal easy without the need for tools.
- Angle plates keep the carbide facing direction of travel to reduce erosion of the bit body, which can reduce bit life.

7 different bit designs can form a continuous edge or 10 serration patterns that allow pass-through of 15 to 60mm aggregate. Serration patterns remove holes and ridges from compacted surfaces. Wide or SnowBit™ create a continuous edge the system can be used for finish grading.

**WIDE**

At 63mm wide this bit can be configured as a continuous edge or placed in every other hole for a 2.5" serration pattern.

**WIDE MINING**

63mm wide & 12mm taller. Imbedded carbide layer adds 72% more carbide to extends bit life.

**STANDARD**

30mm, this bit offers a serration pattern that will allow aggregate up to 30mm to pass through.

**STANDARD MINING**

30mm wide & 12mm taller. Imbedded carbide layer adds 72% more carbide to extends bit life.

**SHARP**

23mm wide, this bit will help break into hard ground while allowing aggregate size to 37mm to pass through.

**SNOW BIT™**

63mm wide bull nose carbide insert & steel face. This continuous edge system is impact resistant & designed for paved road snow removal.

**PENETRATION**

Specially design carbide shape that comes to point and a width of 15mm this bit will help break into any surface.

**BORE SAVER™**

Used to protect adapter board bore holes when not in use.

# LINKAGE PINS »

Motor graders clear the way for machines and vehicles in all kinds of conditions. From grading dirt and gravel to snow removal, components take on tough materials. That's why inspection and maintenance are so important. It's no secret that the longer parts last, the stronger your bottom line. That's why regular inspections, maintenance and proper replacement are critically important. You may not see it, but you could be ruining your pins. Poor maintenance can cost machine downtime for services that could have been avoided. Cat® linkage pins and bearings are designed to meet strict standards and are quality tested to ensure more time between replacements, which means less downtime and more savings in the long run.

# NOTES

## THANK YOU FOR CHOOSING A CAT<sup>®</sup> MOTOR GRADER.

Cat<sup>®</sup> Motor Graders offer world-class cab design, easy-to-use controls and advanced electronics and hydraulics to give you optimum productivity for any application. This guide will provide you with a quick reference for the available aftermarket components and the common maintenance parts you need to keep your Motor Grader working hard for you.

### AFTERMARKET COMPONENTS

Customize your Cat Motor Grader to fit your needs with a variety of specialized products designed for your industry and application. These features, accessories and attachments help optimize and maintain your machine, so you can get the most out of every use.

### COMMON MAINTENANCE PARTS

Preventive maintenance helps extend the life of your machine and protect your investment. Only Cat Parts are made to match your machine's specific filtration needs, lubrication requirements and exact maintenance cycles. That's why our parts kits make it easier to maintain your machine and keep it running at peak performance.
