

CAT® SEAT BELT REMINDER

BUCKLE DOWN ON SAFETY

KEEP YOUR OPERATION SECURE

Wearing a seat belt is one of the easiest ways to keep workers safe. It's also one of the easiest safety regulations to control. Help avoid expensive shutdowns and fines from lack of seat belt usage with the Seat Belt Reminder.

This system has safety features that were designed to help prevent busy operators from forgetting their seat belts. Let's check them out:

1. In-cab alarms — both visual and audible
2. An external beacon
3. Real alert time monitoring with VisionLink®

CAN THE SEAT BELT REMINDER BE INSTALLED ON MY FLEET?

Adding it to your Cat equipment — and other brands — is easy. You can install it in two hours or less in any machine with a 12V or 24V DC system. Your Cat dealer can install it for you or provide a do-it-yourself kit.

HOW IT WORKS

If the seat belt is not buckled while the machine is running and the parking brake is released, the in-cab alarms will go off— giving visual and audible alerts, the external beacon will light up for others to see and VisionLink® will receive a notification. This will help keep your workers safe and buckled all shift.

THE BENEFITS OF SAFETY

The Seat Belt Reminder helps keep your crew safe and helps you comply with safety regulations. If you want to avoid shutdowns, fines and other issues that result from broken seat belt regulations, the Seat Belt Reminder is a great solution. But more importantly, you can help prevent accidents from becoming fatal. Your workers lives are priceless, and your bottom line is important. The Seat Belt Reminder is here to help.

Talk to your dealer today to learn more about installing the Cat® Seat Belt Reminder on your fleet.
