

CAT® OPERATOR COACHING FOR EXCAVATORS

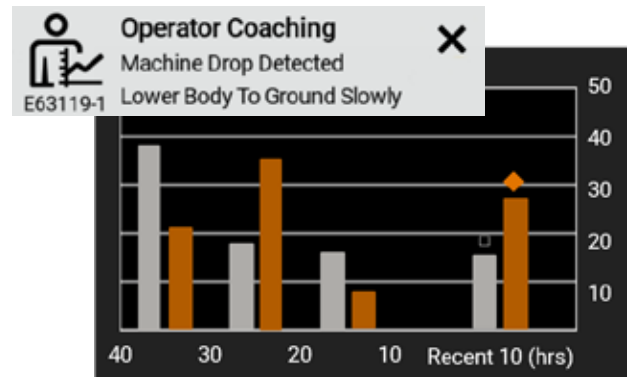

COACHING

EMPOWER OPERATORS. EXCEED TARGETS

Operator Coaching empowers operators with all levels of experience to take their skill, efficiency and productivity to the next level. With quick training and data at their fingertips, operators can track and improve their skills through everyday work on the job site.

- With real-time Tips, Operator Coaching for Excavators will extend the life of the machine, improve digging technique and reduce fuel waste.
- Using the new onboard Operator Coaching menu, the operator can find details on Tips, review data on Tips generated in the last 40 hours and review an Operating Efficiency score for their work.
- Advanced Operator Coaching metrics are available with a VisionLink® Performance or PerformancePro subscription.

HOW IT WORKS

There are two categories of Operator Coaching Tips: Operational Efficiency and Machine Health. During regular operation, the operator will receive a notification when an action with a corresponding Tip is detected. With all the information conveniently available on the in-cab monitor, the operator can choose to explore the Tip right way, later or after their working session.

>> OPERATIONAL EFFICIENCY

High productivity is the goal of every job site. Operational Efficiency Tips help operators stay at the top of their game by identifying areas to increase skill and efficiency, such as digging technique and idle times.

>> MACHINE HEALTH

Some actions are not only inefficient but cause unnecessary wear and tear to the machine and its components. Following Machine Health Tips can extend the life of the machine and maintain the value of your fleet.

Operator Coaching is just one part of an effort by Caterpillar® to empower operators to be at the top of their field. Visit CatOperatorTraining.com to access a library of video content covering a variety of machine and technology features.

PAIR WITH VISIONLINK® PRODUCTIVITY

Gain data-based insights towards operators and operations when you pair Operator Coaching with VisionLink Productivity. With a VisionLink® Performance or PerformancePro subscription, site managers can:

- Track operator improvements overtime and focus training on areas specific to each operator.
- View the count, time and location of Tips captured by Operator Coaching, with dashboards configurable by day, week, operator, machine or specific Tip.

View up to 13 months of data up to the custom date range.

Tips with their Category and the Severity are broken down by day, the last time and location the Tip was activated.

The location with aerial image is available to see exactly where on the job site a Tip was generated.

HOW TO UPGRADE

Operator Coaching for Excavators is available on Next Gen Hex Standard Configuration Models 313-395. Talk to your local Cat dealer to learn how to upgrade.
