

CAT® FILTERS & FLUIDS FOR MINING

EXCEEDING INDUSTRY STANDARDS

Made for uptime, Cat® filters and fluids extend the wear life of your components through contamination defense, system design, and durability. They exceed industry standards in both quality control and performance testing, ensuring peak machine performance.

CAT®

AN ALL-SYSTEM APPROACH TO SUCCESS

BETTER PERFORMANCE

Cat filters and fluids' performance capabilities can be attributed to their durability and ability to maintain system cleanliness. These qualities allow Cat filters and fluids to help protect machines against contamination and breakage.

MORE UPTIME

Because Cat filters protect against harmful particles and maintain cleanliness, they contribute to your machine's overall uptime. Meanwhile, Cat fluids offer improved friction thresholds, viscosity, and seal swelling. Use both together for an effective combination.

LONGER LIFE

Cat fluids help your machine run longer through extended oil drains that reduce wear on your critical components. Cat filters increase machine and component life by preventing debris from hindering engine performance, limiting contaminants, and preventing potential leak paths.

SYSTEMATIC EFFICIENCY

Cat filters and Cat fluids are designed in accordance with your machine's specifications for improved efficiency and performance. They are engineered to work together against wear and contaminants. When you add in S•O•SSM Fluid Analysis, you can actively manage and maintain your machine's health and efficiency, preventing unexpected downtime.

CAT FILTERS & FLUIDS BENEFITS

- + Peak performance
- + System cleanliness and efficiency
- + Enhanced component health
- + Increased uptime and life
- + Health management solutions

COMPREHENSIVE SOLUTIONS

Your Cat dealer delivers expert support so you can get the parts and services you need, right when you need them.
