

QMW INDUSTRIES

WATER TANKERS

Overview

Based in Acacia Ridge, Queensland, QMW was established in 1984 as a family owned business specialising in certified pipe welding. Since then, the company has built its reputation on setting the standard when it comes to safety solutions in the gas, construction, mining, transport, earthmoving, and forestry sectors.

CATERPILLAR OEM SOLUTIONS

QMW WATER TANKERS

Built to meet the demanding needs of large-scale mining operations, QMW water tankers provide exceptional water-carrying capacity, for prolonged dust control on-site with fewer refilling cycles. The tanks are manufactured from high-strength steel and designed for optimal weight distribution, ensuring maximum stability and durability in the harshest working environments.

The integration of these high-capacity water tanks onto the Cat® mining trucks provides a perfect blend of power, efficiency, and reliability. The tanks have been engineered to maintain the truck's balance and performance, preventing unnecessary stress on the chassis while allowing for smooth maneuverability even under full load.

QMW water tankers are available across a broad range of capacities to suit varying site requirements and haul truck platforms. Current configurations range from 50 kL to 150 kL, engineered to deliver optimal weight distribution, stability, and performance across the Cat mining fleet.

The line-up includes solutions for Cat 773, Cat 775, Cat 777, Cat 785, and Cat 789, providing reliable dust suppression capability for both medium and ultra-class mining operations. Other capacities and machine platforms can be engineered on request.

All QMW water tankers are supplied with critical components as standard, including the infill hopper, rear access hatch, overflow tell-tale spouts, pivot mount pin cradles, hoist cylinder pins, and bund drain covers.

CAT® MODEL COMPATIBILITY:

» Cat 773 through 789 Off-Highway Truck Bare Chassis
