

Finding harmony in the details.

Vela

HBF reveals the intentionality of design in everything we make through attention to detail and bespoke American craftsmanship.

Technical precision is married to honesty of materials and purity of form, making the use of your chair a simple process. Please follow these basic instructions for height, locking and tilt adjustments.

1—Tilt

To engage in a backward tilt, grasp the lever located underneath the front of the chair and push backwards. To lock back in original position, push lever forward.

2—Height

While seated, lift the lever. Your weight on the seat will lower the height. By leaning forward and transferring your weight to your feet you will raise the seat height by again lifting the lever.
