

## Parts

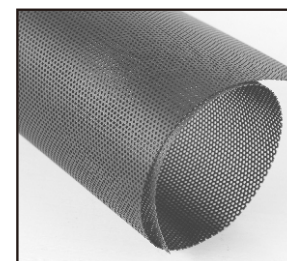

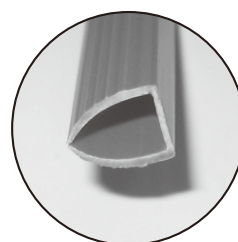

- 4 - Screen Rails
  - 2 - Side Rails
  - 2 - Top and Bottom Rails
- 1 - Screen
- 8 - Suction cup with holders

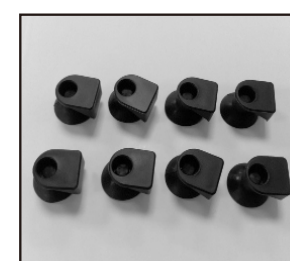

2 SIDE RAILS

2 TOP AND BOTTOM RAILS

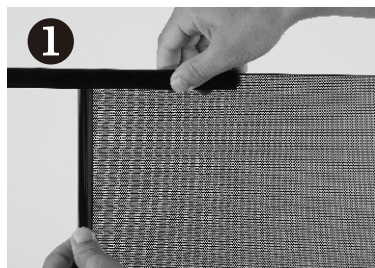

SCREEN

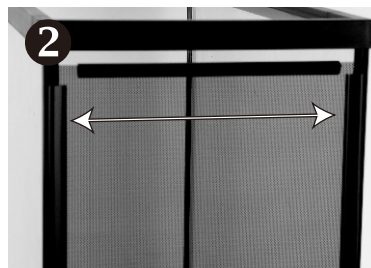

8 SUCTION CUP WITH HOLDERS

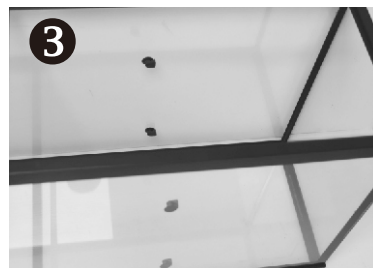

## Setup Instructions

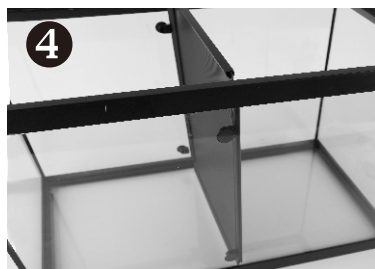

To build the Tank Divider, slide the long side rails onto the screen. The short top and bottom rails are already attached.

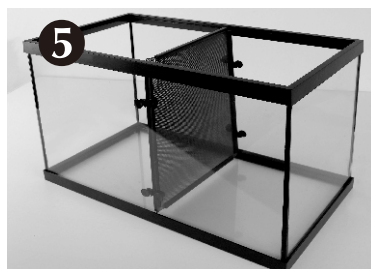

Hold the divider up to the side of your tank to determine the appropriate size. Trim the divider as needed.

The flat side of the suction cups should all be facing the same way.

Place the tank divider into the aquarium, lining it up against the flat side of the suction cup holders.

Now install the remaining suction cups on the opposite side of the tank divider to secure the divider between the suction cups.

\*For best performance ensure the surface of the tank is clean from algae and debris to ensure suction cups stick to glass.
