## Assembly Steps:

- 1) Slide the stem into the fork's steer tube.
- 2) Lower the stem until the mark that says "minimum insertion" is not visible.
- 3) Tighten the stem center bolt so that the handlebar assembly is in line with the fork.
- 4) Loosen axle nuts on front wheel.
- 5) Slide washers to inside of axle nut.
- 6) Slide front wheel between the fork dropouts.
- 7) Center the wheel in the fork and tighten both axle nuts evenly.
- 8) Make sure the wheel is tightened securely on both sides.
- 9) Open seat quick-release lever on the bicycle frame.
- 10) Insert seat, with seat post, into the frame at desired height (make sure the seat post is inserted far enough into the frame to hide the "minimum insertion" mark on the seat post).

## Check the Function of the Balance Bike:

Check that all functions of steering and bolts are properly installed:

- 1) With the front wheel between your legs, try to rotate the handle bar left or right. It should stay in place. If it rotates, check that the steer clamp is fully installed and tighten the clamp bolt further.
- 2) Check the saddle is secure and can not move. Tighten bolts further if excess play is found.

Check all bolts to ensure they are tight, taking care not to over tighten the bolts.
