

Benefits

- Facilisafe is a single assessment offering that allows organizations to assess all security risks via a single service.
- Industrial Control Systems (ICS) Security – Cylance's critical infrastructure experts have backgrounds in cyber incident response and forensics, ICS-focused network and security design, industry specific experience, industrial automation, and operations.
- Enterprise IT and OT Security – With tradecraft knowledge of threat activity groups, Cylance experts identify and prioritize risks through penetration tests, assessments, and gap analysis. We organize information so clients see their full security picture, and then offer strategic and tactical recommendations to ensure clients become secure.

Cylance® employs a team of globally-recognized security experts. These experts are pioneers in the field of non-traditional IT security and have created an approach that has been refined through hundreds of large, complex engagements. Utilizing the understanding of threats to ICS, this approach is dual pronged and focuses on both the strategic and tactical initiatives needed to help organizations implement security best practices in a challenging environment. The team is extensively familiar with the highly sensitive and fragile nature of critical systems and employs passive and non-invasive techniques to identify improvements to the security posture of these systems.

Cylance uses multiple techniques to evaluate, understand, and review the security posture of an organization. These techniques are designed to not impact operations in any way. The general approach is to collect information, assess the data, provide a risk profile, recommend actions, and highlight notable strengths for the organization. This method is repeated for various aspects of the environment to provide clients with actionable findings and recommendations.

The Cylance Difference

- Provides assistance to over 300 clients in 20 countries
- Experts in all areas of enterprise and process security
- Experts in prevention and resilience
- Provides IT and OT coordinated Incident Response Readiness services
- Assessments based on experience with threat actors up to nation-state level attacks
- Nation-state capabilities are incorporated into Cylance's approach
- Deep dive into process engineering – not just cybersecurity
- Leverage National Institute of Standards and Technology (NIST) Cybersecurity Framework
- Methodologies developed through large-scale governance and standards
- Deep understanding of executive-level needs and best practices
