When sensitive data has been compromised, the livelihood of a business is at stake. The longer it takes to discover and remediate the cause of a breach, the greater the chance of damage to the company's reputation and business operations. To limit the amount of exposure and prevent further breaches, organizations need a forensic team dedicated to piece together any evidence and understand the scope of the breach.

Cylance® Consulting offers Forensic Investigation and Analysis services to help your organization **establish business continuity** as soon as you contact us. Our Incident Containment experts will **assist with responding to a forensic investigation**, including **developing an investigation plan and forensic acquisition of electronic data** while adhering to strict chain of custody procedures.

Service Overview

Cylance Consulting's industry-recognized experts have a wealth of incident containment expertise to deliver fast and accurate forensics results to quickly restore operations and minimize the impact on your day-to-day business.

Conducted through our certified examination center, the forensic investigation includes:

- Scope determination
- Plan creation
- Forensic acquisition of electronic data
- Analysis of acquired data

Cylance Consulting can also provide expert witness testimony in the event that the evidence produced and analyzed must be discussed in a court of law.

Deliverables

As part of the forensic investigation and analysis, Cylance Consulting will provide a comprehensive report that includes:

- Finding name, details, and recommendations for remediation
- Vulnerabilities sorted by hostname/IP address with assigned owner and priority
- Remote or on-site executive review of the results

Leverage the expertise of top incident containment consultants if you have reason to believe your systems have been breached. Contact Cylance Consulting or your technology provider to discuss your needs.
