# Top Five Reasons You Want Employees To Use

CYLANCE
SMART ANTIVIRUS

Smart, simple security.

As the first next-generation consumer security product on the market, Cylance Smart Antivirus™ sets itself apart from current traditional antivirus solutions in **five critical ways:**

1 **Reduces the risk of malware that originates in employees' homes from propagating to the corporate network.**

With the proliferation of work and personal devices at home, the distinction between the corporate network and employee's home networks has become blurred. Cylance Smart Antivirus allows corporate security teams to extend their perimeter protection and reduce their attack surface without infringing on employee's privacy or managing their personal devices.

2 **Predicts and prevents malware from executing at the endpoint, rather than allowing the device to become infected, then reporting it.**

Existing traditional antivirus solutions allow devices to act as sacrificial lambs that get infected so they can become aware of new malware and rely on reactive signature updates to protect the rest of their users. Cylance® is the first consumer security product that uses artificial intelligence to predict and prevent future, unknown variants of malware before they can execute, so your employees and their families can go about their digital lives worry-free.

3 **Offers superior protection with the least impact to your device's performance.**

Many of the well-known traditional antivirus solutions were created decades ago and have since bolted on small features or techniques to respond to the malware techniques of each era. As a result, they have become heavy, slow, and inconvenient to use. Cylance uses just a fraction of the system resources of traditional vendors to provide superior protection, ensuring your device never has to slow down to be secure.

4 **Ensures your family is safe and secure anywhere, anytime through web portal access.**

Cylance Smart Antivirus empowers your employee's family with the visibility and awareness of the security status of all devices in the family environment, including remote loved ones such as elderly parents, college kids, etc. The Internet-based, access-from-anywhere web portal provides 24x7 visibility to ensure all enabled devices are safe and secure.

5 **Bottom line? It is simple and easy to use.**

Traditional antivirus solutions are overly complex with confusing switches, dials, and unnecessary alerts. Cylance Smart Antivirus delivers a set-it-and-forget-it security experience. The solution is easy to install, easy to manage, easy to configure, and updates itself, automatically protecting your employees' and their loved ones' devices.
