### Other Materials Used:

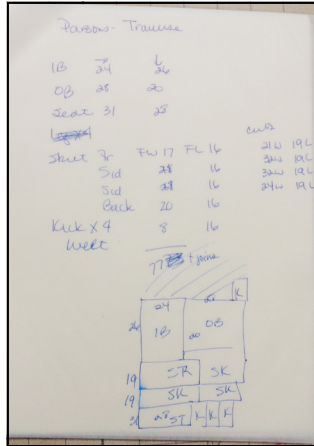

Acrylic Paint  
Needle Nose Pliers

## Tearing Down the Chair:

- 1 Measure the chair for new fabric.
- 2 Remove all old Cambric, fabric and padding.
- 3 Inspect padding for age to see if you can use it again or will need to replace it altogether.
- 4 Pay attention to how the chair was upholstered.
- 5 Take photos as you go.
- 6 Remember to leave all assembly holes uncovered.

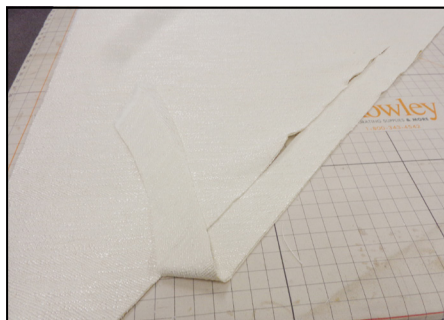

## Making Your Cut Plan:

- 1 From your measurements, plot the pieces as best you can to stay within the width of your fabric.
- 2 Be sure to keep “ups” up and the “side to side” measurements running side to side.
- 3 Place pieces so you use the least amount of running yardage.
- 4 Plot for welt.

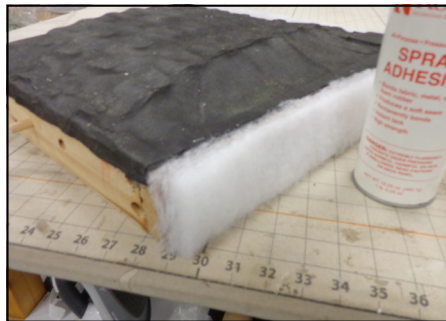

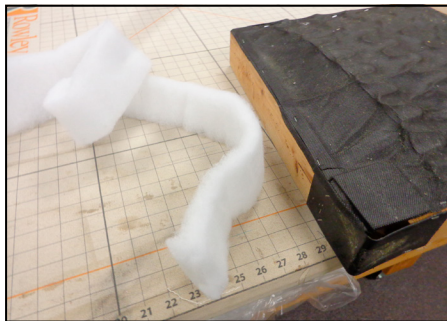

## Cutting the Fabric:

- 1 Cut pieces according to the cut plan.
- 2 Mark each piece for location and for “up”.
- 3 Cut and make welt cord.

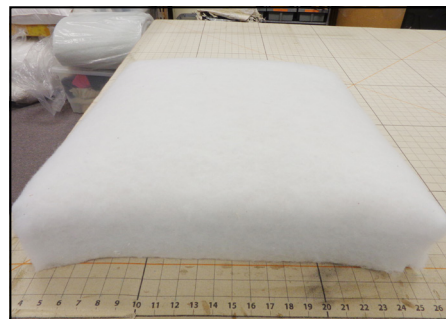

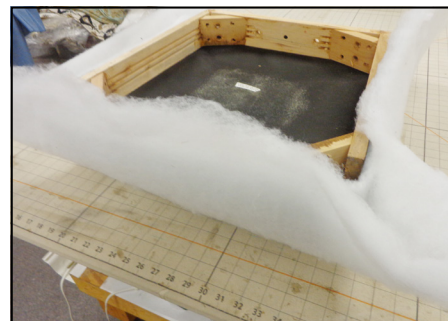

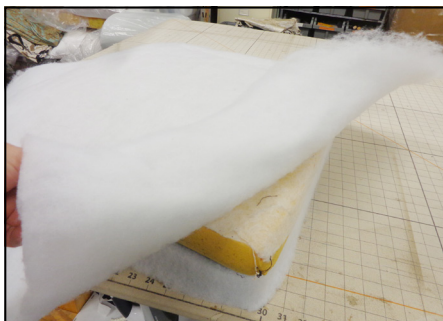

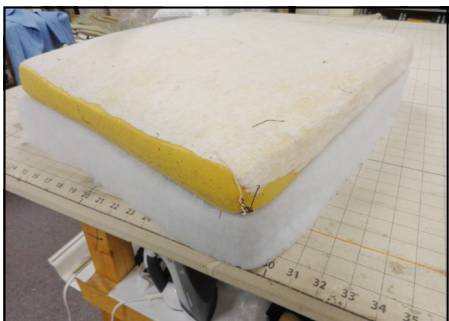

## Preparing the Seat:

- 1 Build up the seat surround area if needed, using Batting and spray glue.
  - A. Only build up three sides to keep the back flat.

- 2 Replace original foam, spray-gluing to base.
- 3 Cover entire Seat with a layer of Batting, wide enough to cover top and all sides.
- 4 Remove excess from the corners.
- 5 Spray-glue in place.
- 6 Sparingly staple batting to frame sides.
- 7 Trim off any excess batting that would have wrapped to the bottom.

## Upholstering the Seat:

- 1 Lay fabric over seat, adjusting as needed to cover area and to keep pattern running true.
- 2 Staple North-South-East-West to keep fabric from shifting.

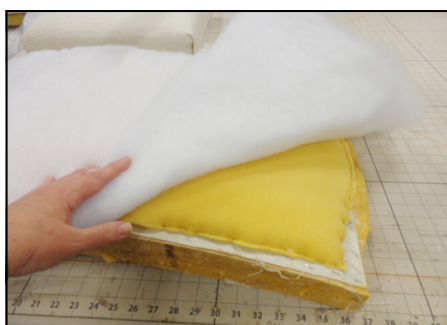

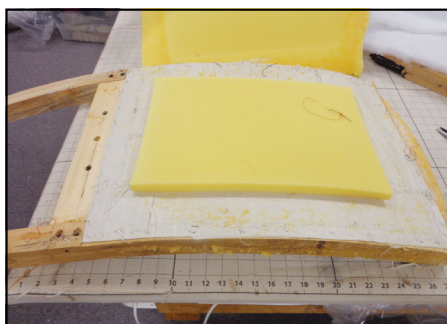

- 3 Complete stapling, leaving the corners for last. Fold in perfect upholstery corners, removing bulk prior to final staple.
- 4 Trim away excess fabric to expose assembly holes.

## Completing the Inside Back (IB):

- 1 Replace original padding.
- 2 Spray-glue a layer of Batting to IB, wrapping to sides.
- 3 Staple sparingly.
- 4 Trim away any excess that may have wrapped to the back.

- 5 Place fabric over padding, adjusting as needed.
- 6 Staple N-S-E-W to keep fabric from shifting.
- 7 At the bottom, use a layer of Cardboard Tack Strip to ensure a straight, tight line.
- 8 Complete stapling.
- 9 At the corners, fold in a perfect upholstery corner, removing bulk prior to the final fold.

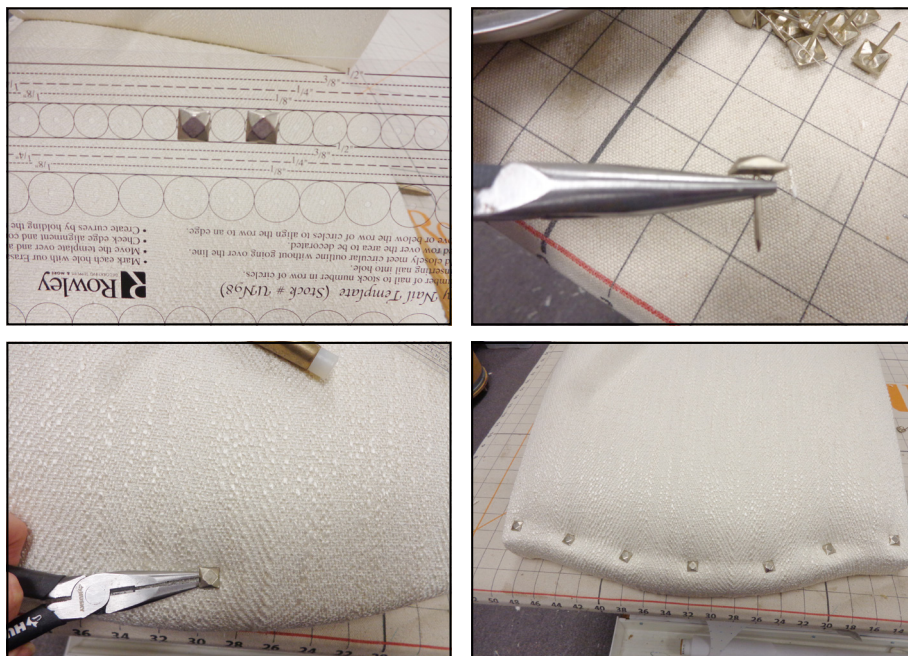

- 10 Replace the seat onto the frame to mark where the IB fabric needs to stop on the sides to match the seat.
- 11 Mark and trim.
- 12 Tuck under and staple to front and back.

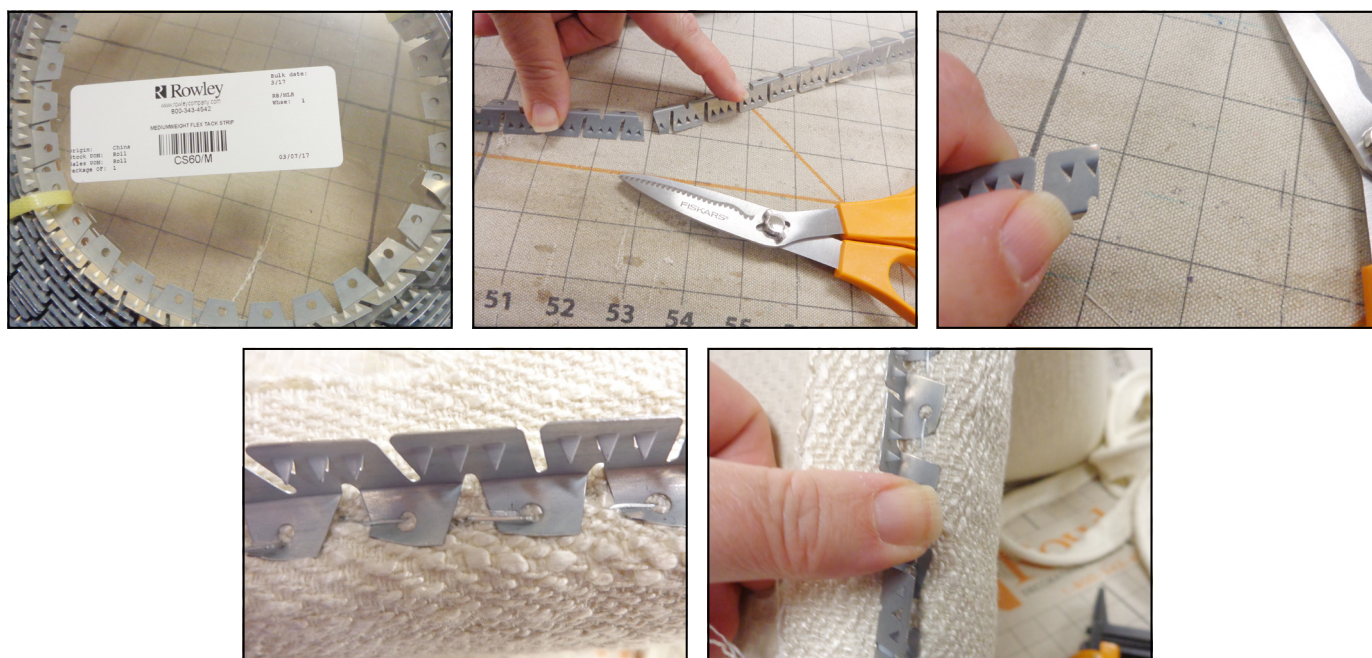

- 13 Decide on your decorative nail design, using nail template to ensure correct spacing.
- 14 Nail in nails to complete your design.
- 15 Replace all bolts of chair to fully re-assemble.

## Preparing the Outside Back (OB):

- 1 Cut strips of Flexible Metal Tack Strip slightly shorter than the area to be covered.
  - A. Be sure to remove any sharp edges left from the original cuttings.
- 2 Place strip on side of OB so the holes are to the outside and the teeth face away from the middle of the chair.
- 3 Staple to secure.
- 4 Finger close halfway.

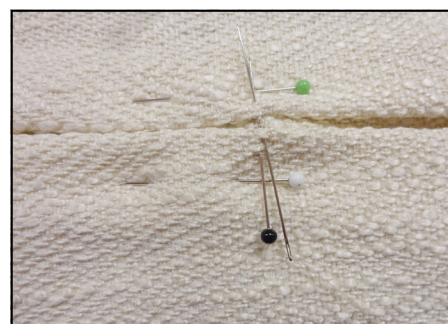

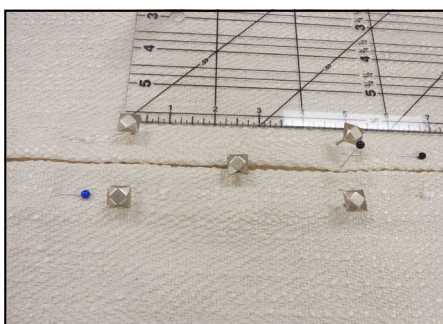

- 5 Complete both sides and the top, finger closing all three sections.
- 6 Cut a layer of batting to fit inside the teeth.
- 7 Staple to back, sparingly.

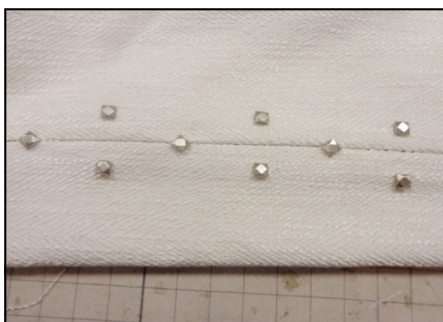

## Preparing the Fabric for the OB:

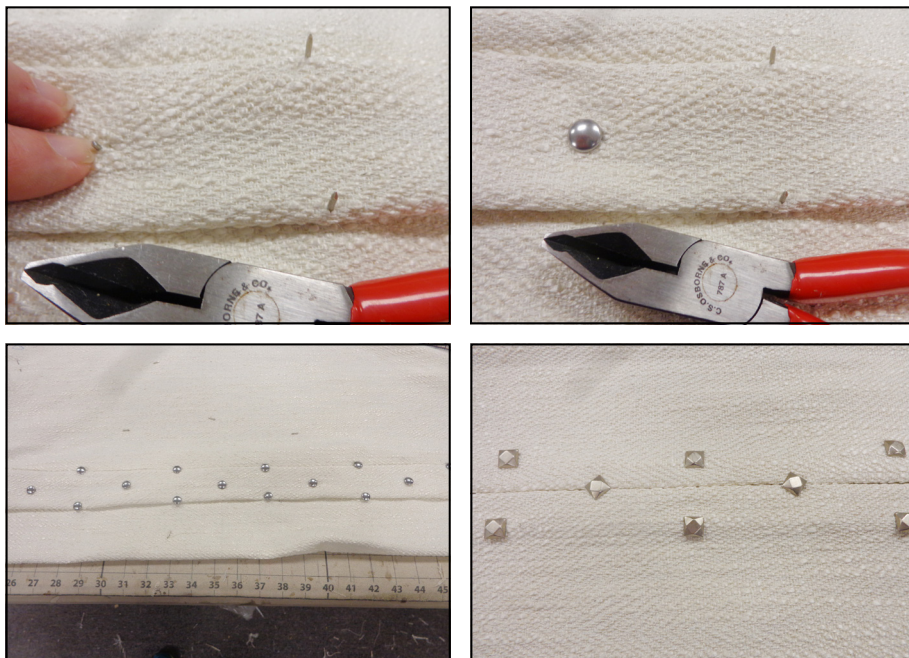

- 1 At the center, fold in an inverted box pleat.
- 2 Press.
- 3 Decide on your nail pattern.

- 4 Sew through all layers at the fold join areas that will be covered with nails.
- 5 Press nails through all layers.

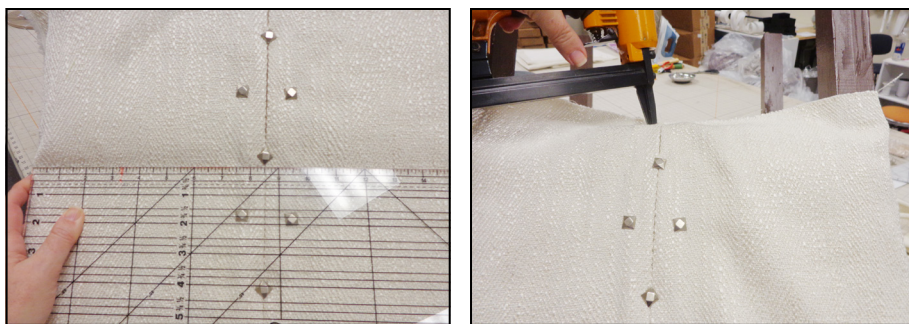

- 6 Carefully turn work over.
- 7 Clip nail shanks to  $\frac{1}{8}$ " and press on nail locks with caps.

## Finishing the OB:

- 1 Place prepared piece on OB, aligning as needed.
- 2 Staple the center of the bottom to secure.

- 3 At the top, trim a few inches to  $\frac{1}{2}$ " past the partially closed teeth of the Flexible Metal Tack Strip.

- 4 Tuck into teeth using a regulator.
- 5 Press closed.
- 6 At the sides, do a small section to secure sides from shifting.
- 7 Complete sides and top.

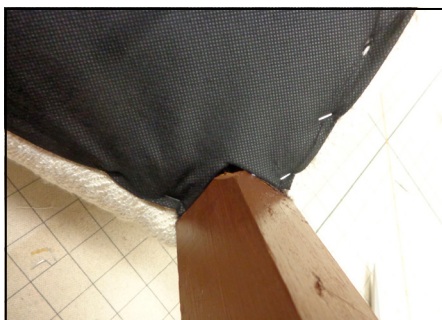

- 8 Complete stapling bottom, cutting relief cuts for the legs.
- 9 Re-check all tucks.
- 10 When you are happy with the OB, pound the teeth closed using a rubber mallet.
- 11 At the top corners, trim and tuck under fabric to make a nice fold.
- 12 Pin to remind yourself to close this later.

- 13 Hand close all folds/corners on the chair at this time.

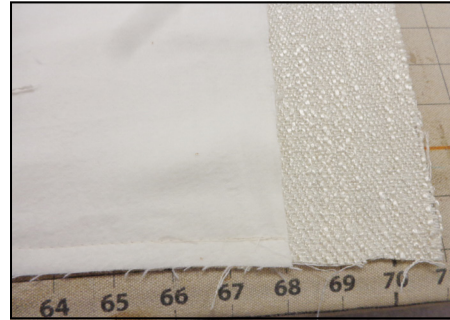

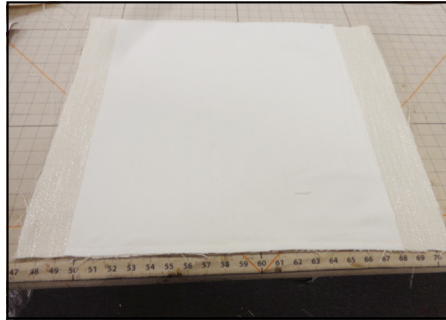

## Finishing the Chair:

- 1 Staple on a layer of cambric to the bottom, cutting away for the legs.

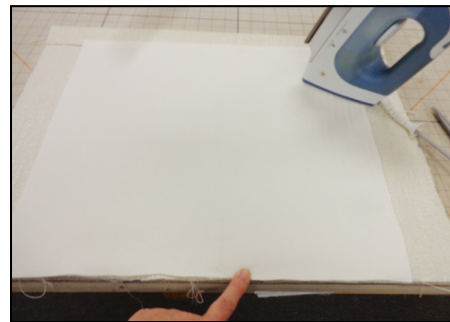

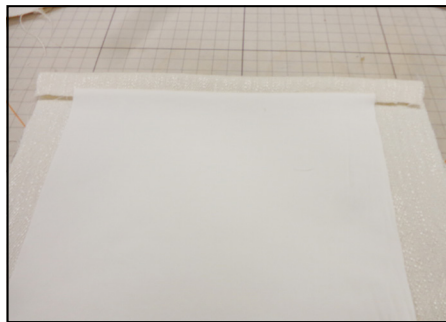

## Preparing the Four Skirt Pieces:

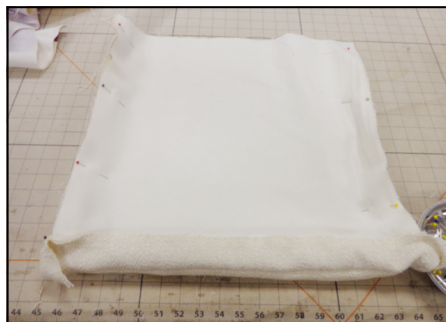

- 1 Cut skirt pieces and lining according to your cut plan.
- 2 With right sides together, align the bottom of the lining to the center of the back of a skirt piece.
- 3 Sew lining to skirt piece.

- 4 Turn right sides out, folding up a 1 1/2" bottom hem.
- 5 Press.
- 6 At the top, trim lining even with face fabric.

- 7 With wrong sides together, align tops of lining and face and pin.
- 8 Sew sides from top to original hem seam.
- 9 Turn right side out and press the corner well.

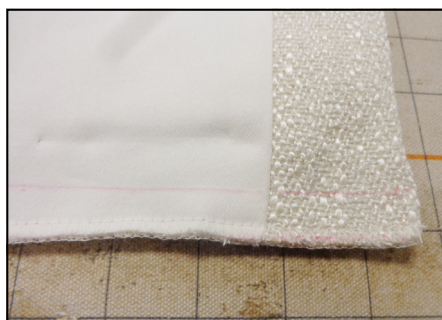

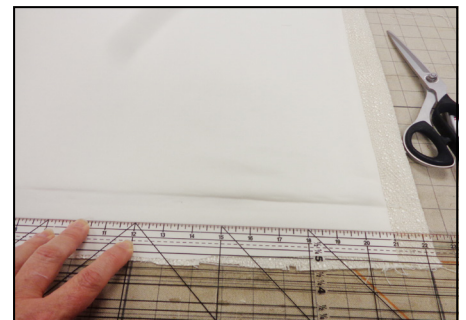

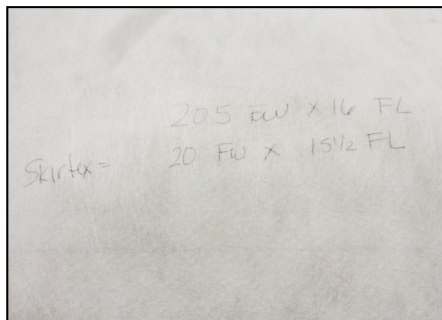

- 10 With the fabric turned wrong sides out, find both press lines in the hem.
- 11 Mark from their intersection to the edge of the original hem seam (this will be an angle).
- 12 Sew on angled line to create a mitered corner.
- 13 Trim off excess and clip the fold open.
- 14 Turn right sides out and press.

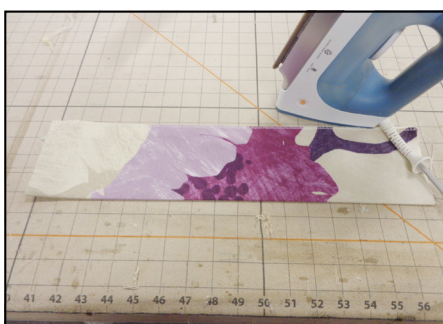

- 15 Cut a piece of Skirtex 1" less wide by 1" less tall than FL and FW.
- 16 Slip Skirtex into skirt sleeve, tucking it tight at the bottom hem.
- 17 Mark for FL and mark  $\frac{1}{2}$ " above FL.
- 18 Serge at top mark.
- 19 Press at FL.
- 20 Complete all four sides of the skirt according to the above steps.

## Preparing the Kick Pleats:

- 1 Cut face fabric and lining to size.
- 2 With right sides together, sew bottom hem.
- 3 Turn right sides out and fold up a 1 ½" bottom hem.
- 4 Press.
- 5 Surge across tops and sides.
- 6 Fold in half, lengthwise, and press.

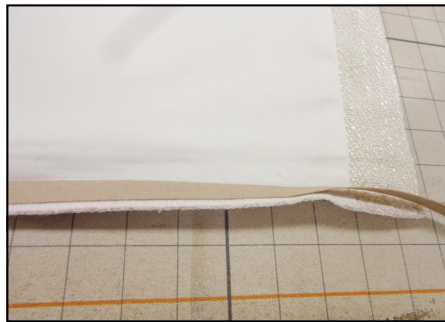

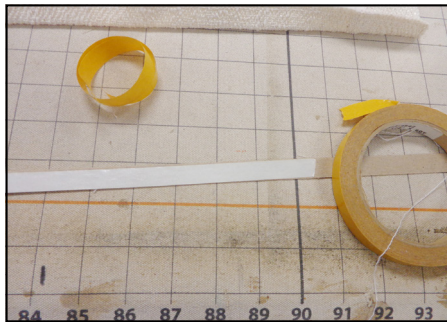

## Finishing the Skirt:

- 1 Measure and place welt cord on chair.
- 2 Staple on welt, making a clean join at the back of the chair.

- 3 Apply a layer of double face tape to the back of each skirt piece and stick a layer of cardboard tack strip to the tape, so the tape sits just above the FL mark.

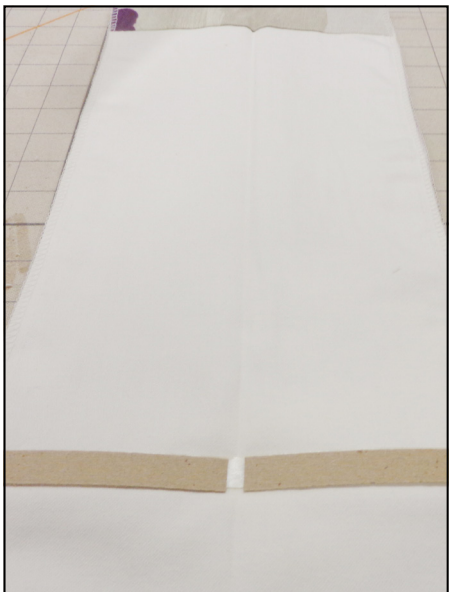

- 4 Position skirt on chair, flip skirt up and out of the way and staple through tack strip and all layers of fabric.

- 5 Complete all four sides.

- 6 For the kick pleats, double face tape two separate pieces of cardboard tack strip to the FL, so the fold is clear.

- 7 Position on chair, flip up and staple.

- 8 Flip down completed skirt.
- 9 Re-check all pieces for proper length and placement, adjust if needed.

**TIPS:**

- For transportation, be sure to flip the skirt up and shrink wrap.
- Use a steamer on site to relieve any wrinkles in the skirt and chair.
