30 Ways to Protect Against Mosquitoes

Mosquitoes pose a major risk to your family’s safety as well as the public in general. By employing a scientific approach to protect against mosquito bites, you can enjoy the outdoors safely and enjoy your life.

PERSONAL PROTECTION

Mosquito Repellent
- Mosquito repellent should be a part of your daily routine. Apply it 30 minutes before you go out.
- Use Repellent: DEET and other repellents kill or repel mosquitoes. Always apply repellent to exposed skin and other exposed areas.

Water Borne Illnesses
- Do not use any water from a stream or pond. Use only water from a可靠 source.
- Avoid standing water in your yard.

Pet Protection
- Apply Topical Treatments: Most topical treatments are available for cats and dogs. Read the instructions carefully before use.
- Avoid mosquito bites: Pet your dog or cat before going for a walk to minimize the risk of mosquito bites.

HOME PROTECTION

Mosquitoes are a vector of many of our most common illnesses. Take all of these steps to reduce your risk.
- Keep Doors and Windows Closed: Most mosquitoes enter through doors and windows. Keep them closed to prevent mosquito entry.
- Use Mosquito Nets: If you’re in a hot climate, consider using mosquito nets when sleeping or relaxing.

YARD PROTECTION

Mosquitoes breed in standing water, so it’s important to eliminate any standing water from your yard.
- Eliminate standing water: Check your yard for any standing water and eliminate it.
- Use Mosquito Magnet: Mosquito Magnet helps to reduce the number of mosquitoes in your yard.

COMMUNITY PROTECTION

Join the Fight Against Mosquitoes: Join the fight against mosquito-borne diseases by being a mosquito controller.
- Keep your yard clean: Regularly check your yard for any standing water.
- Help your neighbors: Help your neighbors by eliminating any standing water in their yard.
